

ing with the snow—to have the DC-9's taillight as a reference point ahead. Through the rear mirror he could make out the shape of another, larger jet now following. On radio, the ground controller cautioned, "Air France four-oh-four, there is an airport ground vehicle between you and Air Canada."

It took a quarter of an hour to reach the intersection where runway three zero was blocked by the Aéreo-Mexican 707. Before then, Mel had separated from the stream of taxiing craft which were destined for takeoff on the two other active runways.

He stopped the car and got out. In the dark and loneliness of here, the storm seemed even more wintry and violent as he neared the terminal. The wind howled across the deserted tarmac. If wolves appeared tonight, Mel thought, it would not be surprising.

A shadowy figure hailed him. "Is that Mr. Patroni?"

"No, it isn't." Mel found that he, too, had to shout to make himself heard above the wind. "But Joe Patroni's on the way."

The other man came closer. He was huddled into a parka, his face blue with cold. "When he gets here, we'll be glad to see him. Though I'm damned if I know what Patroni'll do. We've tried about everything to get this bastard out." He gestured to the airplane looming, shadowy, behind them. "He's stuck, but good."

Mel identified himself, then asked, "Who are you?"

"Ingram, sir. Aéreo-Mexican maintenance foreman. Right now, I wish I had some other job."

As the two men talked, they moved nearer to the stalled Boeing 707, instinctively seeking shelter under the wings and fuselage, high above them. Under the big jet's belly, a red hazard light winked rhythmically. In its reflection Mel could see the mud beneath snow in which the aircraft's wheels were deeply mired. On the runway and adjoining taxiway, clustered like anxious relatives, were a profusion of trucks and service vehicles, including a fuel tanker, baggage tenders, a maintenance office van, two crew buses, and a roaring power cart.

Mel pulled the collar of his topcoat tightly around him. "We need this runway urgently—tonight. What have you done so far?"

In the past two hours, Ingram reported, old-fashioned loading ramps had been trundled from the terminal, manhandled to the aircraft, and passengers guided down them. It

had been a slow, tricky job because steps were icing as fast as they were cleared. An elderly woman had been carried down by two mechanics. Babies were passed from hand to hand in blankets. Now, all passengers were gone—in buses, along with the stewardesses and the second officer. The captain and first officer remained.

"Since the passengers left—have you tried to get the airplane moving?"

The foreman nodded affirmatively. "Had the engines running twice. The captain's put on all the power he dare. But she won't come free. Just seems to dig herself in deeper."

"What's happening now?"

"We're taking off more weight, hoping that'll help." Most of the fuel, Ingram added, had been sucked out by tankers—a heavy load since tanks were full for takeoff. Baggage and freight compartments in the belly had been emptied. A post office truck was retrieving mailbags.

Mel nodded. The mail, he knew, would have come off anyway. The airport post office kept a minute-to-minute watch on airline schedules. They knew exactly where their mailbags were and, if delays occurred, postal employees quickly switched mail from one airline to another. Mail from the stranded jet, in fact, would fare better than passengers. In half an hour at most, it would be on its way by another flight, if necessary on an alternate route.

Mel asked, "Have you all the help you need?"

"Yes, sir—for all we can do now. I've got most of our crew from Aéreo-Mexican here—a dozen men. Right now, half of 'em are thawing out in one of the buses. Patroni may want more people, depending on what his ideas are." Ingram turned, surveying the silent aircraft gloomily. "But if you ask me, it's going to be a long job, and we'll need heavy cranes, jacks, and maybe pneumatic bags to lift the wings. For most of those, we'd have to wait until daylight. The whole thing could take most of tomorrow."

Mel said sharply, "It can't take most of tomorrow, or even tonight. This runway has to be cleared . . ." He stopped abruptly, shivering with a suddenness which startled him. The intensity was unexpected, almost eerie.

Mel shivered again. What was it? He assured himself: the weather—the fierce, harsh wind across the airport, driving the whirling snow. Yet, strangely, since leaving the car until this moment, his body had adjusted to the cold.

From the opposite side of the airfield, above the wind, he could hear the thunder of jet engines. They rose to a crescendo, then diminished as a flight took off. Another followed, and another. Over there, all was well.

And here?

It was true, wasn't it?—for the briefest instant he had had a premonition. A hint, no more; an intuition; the smell of greater trouble brewing. He should ignore it, of course; impulse, premonitions, had no place in pragmatic management. Except that once, long ago, he had had the selfsame feeling—a conviction of events accumulating, and progressing to some disastrous, unenvisioned end. Mel remembered the end, which he had been unable to avert . . . entirely.

He glanced at the 707 again. It was snow-covered now, its outline blurring. Commonsense told him: apart from the unway blockage and the inconvenience of takeoffs over Meadowood, the situation was harmless. There had been a mishap, with no injuries, no apparent damage. Nothing more.

"Let's go to my car," he told the Aéreo-Mexican foreman. "We'll get on the radio and find out what's happening."

On the way, he reminded himself that Cindy would shortly be waiting impatiently downtown.

Mel had left the car heater turned on, and inside the car it was comfortably warm. Ingram grunted appreciatively. He loosened his coat and bent forward to hold his hands in the stream of warm air.

Mel switched the radio to the frequency of airport maintenance.

"Mobile one to Snow Desk. Danny, I'm at the blocked intersection of three zero. Call TWA maintenance and check on Joe Patroni. Where is he? When coming? Over."

Danny Farrow's voice crisped back through the speaker on the dash. "Snow Desk to mobile one. Wilco. And, Mel, your wife called."

Mel pressed the mike button. "Did she leave a number?"

"Affirmative."

"Mobile one to Snow Desk. Please call her, Danny. Tell her I'm sorry, I'll be a little late. But check on Patroni first."

"Understood. Stand by." The radio went silent.

Mel reached inside his topcoat for a pack of Marlboros. He offered them to Ingram.

"Thanks."

than usually snippy with Danny, but, loyally, he was ing so.

As for the Aéreo-Mexican 707, obviously there was more to be done until Joe Patroni arrived. Patroni vice about not getting the aircraft more deeply mire good sense.

Ingram was pulling on heavy mitts and refastening his "Thanks for the warm-up." He went out, into the wind snow, slamming the door quickly. A few moments later he could see him plodding through deep drifts toward the assembled vehicles on the taxiway.

On radio, the Snow Desk was speaking to Main Snow Center. Mel waited until the exchange finished, held the transmit button down. "This is mobile one, I'm going to the Conga Line."

He eased the car forward, picking his way carefully through blowing snow and darkness, with only widely spaced lights to guide him.

The Conga Line, both spearhead and prime mover of the airport snow-fighting system, was—at the moment—on way one seven, left. In a few minutes, Mel thought he would find out for himself if there was truth in the police, in the critical report of Captain Demerest to the Snow Committee.

6

The subject of Mel's thoughts—Captain Vernon of Trans America—was, at the moment, some three miles from the airport. He was driving his Mercedes 230 Sedan, and, compared with the journey he had made to the airport earlier from home, was having little trouble negotiating the streets, which had been recently plowed. Snow was still falling heavily, abetted by a strong wind, but the fresh cover of the ground was not yet deep enough to make the journey difficult.

Demerest's destination was a group of three-story apartment blocks, close to the airport, known colloquially among the crews as Stewardess Row. It was here that many of the stewardesses based at Lincoln International—from a

—maintained apartments. Each apartment was usually shared by two or three girls, and the initiated also had a name for the individual ménages. They were known as stewardess nests.

The nests were often the scene of lively, off-duty parties, and sometimes headquarters for the amorous affairs which occurred, with predictable regularity, between stewardesses and male flying crews.

Taken as a whole, the stewardess nests were neither more nor less freewheeling than other apartments occupied by single girls elsewhere. The difference was that most of what transpired in the way of swinging, amoral activities, involved airline personnel.

There was good reason for this. Both the stewardesses and male crew members whom they met—captains, and first and second officers—were, without exception, high-caliber people. All had reached their jobs, which many others coveted, through a tough, exacting process of elimination in which those less talented were totally eclipsed. The comparative few who remained were the brightest and best. The result was a broth of sharp, enlightened personalities with a zest for life and the perceptiveness to appreciate one another.

Vernon Demerest, in his time, had appreciated many stewardesses, as they had appreciated him. He had, in fact, had a succession of affairs with beautiful and intelligent young women whom a monarch or a male movie idol might well have desired without attaining. The stewardesses whom Demerest and fellow pilots knew, and regularly made love to were neither whores nor easy lays. They were, however, alive responsive, and sexually endowed girls, who valued quality and took it when so obviously and conveniently close to hand.

One who had taken it—so to speak—from Vernon Demerest, and seemed inclined to continue to, was a vivacious attractive, English-born brunette, Gwen Meighen. She was a farmer's daughter who had left home to come to the United States ten years earlier at the age of eighteen. Before joining Trans America she was briefly a fashion model in Chicago. Perhaps because of her varied background, she combined uninhibited sexuality in bed with elegance and style of it.

It was to Gwen Meighen's apartment that Vernon was headed now.

Later tonight, the two of them would leave for P Trans America Flight Two. On the flight deck, Captain

than usually snippy with Danny, but, loyally, he wasn't saying so.

As for the Aéreo-Mexican 707, obviously there was nothing more to be done until Joe Patroni arrived. Patroni's advice about not getting the aircraft more deeply mired made good sense.

Ingram was pulling on heavy mitts and refastening his coat. "Thanks for the warm-up." He went out, into the wind and snow, slamming the door quickly. A few moments later, Mel could see him plodding through deep drifts toward the assembled vehicles on the taxiway.

On radio, the Snow Desk was speaking to Maintenance Snow Center. Mel waited until the exchange finished, then held the transmit button down. "This is mobile one, Danny. I'm going to the Conga Line."

He eased the car forward, picking his way carefully in the blowing snow and darkness, with only widely spaced runway lights to guide him.

The Conga Line, both spearhead and prime mover of the airport snow-fighting system, was—at the moment—on runway one seven, left. In a few minutes, Mel thought grimly, he would find out for himself if there was truth, or merely malice, in the critical report of Captain Demerest's Airlines Snow Committee.

6

The subject of Mel's thoughts—Captain Vernon Demerest of Trans America—was, at the moment, some three miles from the airport. He was driving his Mercedes 230 SL Roadster and, compared with the journey he had made to the airport earlier from home, was having little trouble negotiating local streets, which had been recently plowed. Snow was still falling heavily, abetted by a strong wind, but the fresh covering on the ground was not yet deep enough to make conditions difficult.

Demerest's destination was a group of three-story apartment blocks, close to the airport, known colloquially to flying crews as Stewardess Row. It was here that many of the stewardesses based at Lincoln International—from all airlines

-maintained apartments. Each apartment was usually shared by two or three girls, and the initiated also had a name for the individual ménages. They were known as stewardess nests.

The nests were often the scene of lively, off-duty parties, and sometimes headquarters for the amorous affairs which occurred, with predictable regularity, between stewardesses and male flying crews.

Taken as a whole, the stewardess nests were neither more or less freewheeling than other apartments occupied by single girls elsewhere. The difference was that most of what transpired in the way of swinging, amoral activities, involved airline personnel.

There was good reason for this. Both the stewardesses and male crew members whom they met—captains, and first and second officers—were, without exception, high-caliber people. All had reached their jobs, which many others coveted through a tough, exacting process of elimination in which those less talented were totally eclipsed. The comparative few who remained were the brightest and best. The result was a group of sharp, enlightened personalities with a zest for life and the perceptiveness to appreciate it.

rest would command. In the passenger cabins, aft, Gwen Meighen would be senior stewardess. At the Rome end of the journey, there would be a three-day layover for the crew, while another crew—already in Italy for its own layover—would fly the airplane back to Lincoln International.

The word "layover" had long ago been adopted officially by airlines and was used deadpan. Possibly, whoever coined the term had a sense of humor; in any case, flying crews frequently gave it a practical application as well as its official one. Demerest and Gwen Meighen were planning a personal definition now. On arrival in Rome, they would leave immediately for Naples for a forty-eight-hour "layover" together. It was a halcyon, idyllic prospect, and Vernon Demerest smiled appreciatively at the thought of it. He was nearing Stewardess Row, and as he reminded himself of how well other things had gone this evening, his smile broadened.

He had arrived at the airport early, after leaving Sarah, his wife, who—placidly as usual—had wished him a pleasant trip. In an earlier age, Sarah might have busied herself with needlepoint or knitting during her liege's absence. As it was, he knew that as soon as he had left, she would become immersed in her curling club, bridge, and amateur oil painting which were the mainstays of her life.

Sarah Demerest's placidity, and her dullness which naturally went with it, were qualities her husband had come to accept and, in a perverse way, valued. Between flying trips and affairs with more interesting women, he thought of his sojourns at home, and sometimes spoke of them to intimates, as "going into the hangar for a stand down." His marriage had another convenience. While it existed, the women he made love to could become as emotional and demanding as they liked, but he could never be expected to meet the ultimate demand of matrimony. In this way, he had a perpetual protection against his own hasty action in the heat of passion. As to sexual intimacy with Sarah, he still obliged her occasionally, as one would play "throw the ball" with an old dog. Sarah responded dutifully, with conventional body heavings and quickened breath, though he suspected both were more from rote than passion, and that if they quit copulation entirely she would not be overly concerned. He was also sure that Sarah suspected his philandering, if not in fact, then at least by instinct. But, characteristically, she would prefer not

to know, an arrangement in which Vernon Demerest was happy to cooperate.

Another thing which had pleased him this evening was the Airlines Snow Committee report in which he had delivered a verbal kick in the crotch, aimed at his stuffed-shirt brother-in-law, Mel Bakersfeld.

The critical report had been solely Demerest's idea. The other two airline representatives on the committee had at first taken the view that the airport management was doing its best under exceptional conditions. Captain Demerest argued otherwise. The others had finally gone along with him and agreed that Demerest would personally write the report, which he made as scathing as he could. He had not bothered about accuracy or otherwise of the indictment; after all, with so much snow around, who could be sure of anything? He had, however, made certain that the widely circulated report would cause a maximum of embarrassment and irritation to Mel Bakersfeld. Copies were now being Xeroxed and would be sent to regional vice-presidents of all airlines, as well as airline headquarters, in New York and elsewhere. Knowing how everyone enjoyed finding a scapegoat for operational delays, Captain Demerest was confident that telephones and teletypes would be busy after its receipt.

A revenge, Vernon Demerest thought pleurably—small but satisfying—had been exacted. Now, perhaps, his limping, quarter-cripple brother-in-law would think twice before antagonizing Captain Demerest and the Air Line Pilots Association, as Mel Bakersfeld had presumed to do—in public—two weeks ago.

Captain Demerest swung the Mercedes into an apartment building parking lot. He stopped the car smoothly and got out. He was a little early, he noticed—a quarter of an hour before the time he had said he would collect Gwen and drive her to the airport. He decided to go up, anyway.

As he entered the building, using the passkey Gwen had given him, he hummed softly to himself, then smiled, realizing the tune was *O Sole Mio*. Well, why not? It was appropriate. Naples . . . a warm night instead of snow, the view above the bay in starlight, soft music from mandolins, Chianti with dinner, and Gwen Meighen beside him . . . all were less than twenty-four hours away. Yes, indeed!—*O Sole Mio*. He continued humming it.

In the elevator going up, he remembered another good thing. The flight to Rome would be an easy one.

Tonight, though Captain Demerest was in command of Flight Two—*The Golden Argosy*—he would do little of the work which the flight entailed. The reason was that he was flying as a line check captain. Another four-striper captain—Anson Harris, almost as senior as Demerest himself—had been assigned to the flight and would occupy the command pilot's left seat. Demerest would use the right seat—normally the first officer's position—from where he would observe and report on Captain Harris's performance.

The check flight arrangement had come up because Captain Harris had elected to transfer from Trans America domestic operations to international. However, before flying as a full-fledged international captain, he was required to make two flights over an overseas route with a regular line captain who also held instructor's qualifications. Vernon Demerest did.

After Captain Harris's two flights, of which tonight's would be the second, he would be given a final check by a senior supervisory captain before being accepted for international command.

Such checks—as well as regular six-monthly check flights, which all pilots of all airlines were required to undergo—entailed an aerial scrutiny of ability and flying habits. The checks took place on ordinary scheduled flights, and the only indication a passenger might have that one was in progress would be the presence of two four-striper captains on the flight deck up front.

Despite the fact that captains checked each other, the tests, both regular and special, were usually serious, exacting sessions. The pilots wanted them that way. Too much was at stake—public safety and high professional standards—for any mutual back-scratching, or for weaknesses to be overlooked. A captain being checked was aware that he must measure up to required standards in all respects. Failure to do so would mean an automatic adverse report which, if serious enough, could lead to an even tougher session with the airline's chief pilot, with the testee's job in jeopardy.

Yet, while performance standards were not relaxed, senior captains undergoing flight checks were treated by their colleagues with meticulous courtesy. Except by Vernon Demerest.

Demerest treated any pilot he was assigned to test, junior or senior to himself, in precisely the same way—like an errand schoolboy summoned to the headmaster's presence. Moreover, in the headmaster's role, Demerest was officious, arrogant, condescending, and tough. He made no secret of his conviction that no one else's ability as a pilot was superior to his own. Colleagues who received this brand of treatment aged inwardly, but had no choice but to sit and take it. Subsequently they vowed to one another that when Demerest's own time came they would give him the meanest, toughest heck ride he had ever had. They invariably did, with a single consistent result—Vernon Demerest turned in a flawless performance which could not be faulted.

This afternoon, characteristically, Demerest prefaced his heck session by telephoning Captain Anson Harris at home. "It'll be a bad night for driving," Demerest said without preamble. "I like my crew to be punctual, so I suggest you allow plenty of time to get to the airport."

Anson Harris, who in twenty-two unblemished years with Trans America had never been late for a single flight, was so outraged, he almost choked. Fortunately, before Harris could get any words out, Captain Demerest hung up.

Still fuming, but to make absolutely sure that Demerest would not catch him out, Captain Harris had arrived at the airport almost three hours ahead of flight time instead of the usual one hour. Captain Demerest, fresh from his stint with the Airlines Snow Committee, had encountered Harris in the Cloud Captain's Coffee Shop. Demerest was wearing a sports jacket and slacks; he kept a spare uniform in his airport locker and planned to change into it later. Captain Harris, a graying, grizzled veteran whom many younger pilots addressed as "sir," was in Trans America uniform.

"Hi, Anson." Vernon Demerest dropped into an adjoining seat at the counter. "I see you took my good advice."

Captain Harris's grip on his coffee cup tightened slightly, but all he said was, "Good evening, Vern."

"We'll start the pre-flight briefing twenty minutes earlier than usual," Demerest said. "I want to check your flight manuals."

Thank God, Harris thought, his wife had gone through his manuals only yesterday, inserting the very latest amendments. But he had better check his mail slot in the dispatch office. This bastard was likely to fault him for not making an amend-

ment published only this afternoon. To give his hands—which were itching—something to do, Captain Harris filled and lit his pipe.

He was aware of Vernon Demerest looking at him critically.

"You're not wearing a regulation shirt."

For a moment, Captain Harris could not believe his colleague was serious. Then, as he realized he was, Harris's face suffused a deep plum red.

Regulation shirts were an irritant to Trans America pilots, as they were to pilots of other airlines. Obtainable through company sources, the official shirts cost nine dollars each, and were often ill fitting, their material of dubious quality. Though contrary to regulations, a much better shirt could be purchased independently for several dollars less, with the difference in appearance scarcely noticeable. Most pilots bought the unofficial shirts and wore them. *Vernon Demerest did too*. On several occasions Anson Harris had heard Demerest speak disdainfully of the company's shirts and point to the superior quality of his own.

Captain Demerest motioned to a waitress for coffee, then reassured Harris, "It's all right. I won't report on your wearing a non-reg shirt here. As long as you change it before you come on my flight."

Hold on! Anson Harris told himself. *Dear God in heaven, give me strength not to blow, which is probably what the ornery son-of-a-bitch wants. But why? Why?*

All right. All right, he decided; indignity or not, he would change his unofficial shirt for a regulation one. He would not give Demerest the satisfaction of having a single miniscule check point on which to fault him. It would be difficult to get a company shirt tonight. He would probably have to borrow one—exchange shirts with some other captain or first officer. When he told them why, they would hardly believe him. He hardly believed it himself.

But when Demerest's own check flight came up . . . *the next, and all others from this moment on . . . let him beware*. Anson Harris had good friends among the supervisory pilots. Let Demerest be wearing a regulation shirt; let him hew to regulations in every other trifling way . . . *or else*. Then Harris thought glumly: The foxy bastard will remember; he'll make sure he does.

"Hey, Anson!" Demerest seemed amused. "You've bitten off the end of your pipe."

And so he had.

Remembering, Vernon Demerest chuckled. Yes, it *would* be an easy flight tonight—for him.

His thoughts returned to the present as the apartment block elevator stopped at the third floor. He stepped into the carpeted corridor and turned to the left familiarly, heading for the apartment which Gwen Meighen shared with a stewardess of United Air Lines. The other girl, Demerest knew because Gwen had told him, was away on an overnight flight. On the apartment door bell he tapped out their usual signal, his initials in Morse . . . dit-dit-dit-dah dah-dit-dit . . . then went in, using the same key which opened the door below.

Gwen was in the shower. He could hear the water running. When he went to her bedroom door, she called out, "Vernon, is that you?" Even competing with the shower, her voice—with its flawless English accent, which he liked so much—sounded mellow and exciting. He thought: Small wonder Gwen had so much success with passengers. He had seen them appear to melt—the men especially—when her natural charm was turned toward them.

He called back, "Yes, honey."

Her filmy underthings were laid out on the bed—panties, sheer nylons; a transparent bra, flesh colored, with a girdle of the same material; a French silk, hand-embroidered slip. Gwen's uniform might be standard, but beneath it she believed in expensive individuality. His senses quickened; he moved his eyes away reluctantly.

"I'm glad you came early," she called again. "I want to have a talk before we leave."

"Sure, we've time."

"You can make tea, if you like."

"Okay."

She had converted him to the English habit of tea at all times of day, though he had scarcely ever drunk tea at all until knowing Gwen. But now he often asked for it at home, a request which puzzled Sarah, particularly when he insisted on it being correctly made—the pot warmed first, as Gwen had taught him, the water still boiling at the instant it touched the tea.

He went to the tiny kitchen, where he knew his way around, and put a kettle of water on the stove. He poured

milk into a jug from a carton in the refrigerator, then drank some milk himself before putting the carton back. He would have preferred a Scotch and soda, but, like most pilots, abstained from liquor for twenty-four hours before a flight. Out of habit he checked his watch; it showed a few minutes before 8:00 P.M. At this moment, he realized, the sleek, long-range Boeing 707 jet which he would command on its five-thousand mile flight to Rome, was being readied for him at the airport.

He heard the shower stop. In the silence he began humming once again. Happily. *O Sole Mio.*

7

The blustering, biting wind across the airfield was as strong as ever, and still driving the heavily falling snow before it.

Inside his car, Mel Bakersfeld shivered. He was heading for runway one seven, left, which was being plowed, after leaving runway three zero and the stranded Aéreo-Mexican jet. Was the shivering due to the cold outside, Mel wondered, or to memory, which the scent of trouble a few minutes ago, plus the nagging reminder from the old injury of his foot, had triggered?

The injury had happened sixteen years ago off the coast of Korea when Mel had been a Navy pilot flying fighter missions from the carrier *Essex*. Through the previous twelve hours (he remembered clearly, even now) he had had a presentiment of trouble coming. It wasn't fear—like others, he had learned to live with that; rather, a conviction that something fateful, possibly final, was moving inexorably toward him. Next day, in a dogfight with a MIG-15, Mel's Navy F9F-5 had been shot down into the sea.

He managed a controlled ditching, but though unhurt himself, his left foot was trapped by a jammed rudder pedal. With the airplane sinking fast—an F9F-5 had the floating characteristics of a brick—Mel used a survival-kit hunting knife to slash desperately, wildly, at his foot and the pedal. Somehow, underwater, his foot came free. In intense pain, half-drowned, he surfaced.

He had spent the next eight hours in the sea before being picked up, unconscious. Later he learned he had severed the

ligaments in front of his ankle, so that the foot extended from his leg in an almost straight line.

In time, Navy medics repaired the foot, though Mel had never flown—as a pilot—since then. But at intervals the pain still returned, reminding him that long ago, as on other later occasions, his instinct for trouble had been right. He had the same kind of instinct now.

Handling his car cautiously, being careful to retain his bearings in the darkness and restricted visibility, Mel was nearing runway one seven, left. This was the runway which, the tower chief had indicated, Air Traffic Control would seek to use when the wind shifted as was forecast to happen soon.

At the moment, on the airfield, two runways were in use: one seven, right, and runway two five.

Lincoln International had five runways altogether. Through the past three days and nights they had represented the front line of the battle between the airport and the storm.

The longest and widest of the five was three zero, the runway now obstructed by Aéreo-Mexican. (With a change of wind and an aircraft approaching from the opposite direction, it could also be runway one two. The figures indicated compass headings of 300 and 120 degrees.) This runway was almost two miles long and as wide as a short city block; an airport joke claimed that one end could not be seen from the other because of the earth's curvature.

Each of the other four runways was half a mile or so shorter, and less wide.

Without ceasing, since the storm began, the miles of runways had been plowed, vacuumed, brushed, and sanded. The motorized equipment—several million dollars' worth of roaring diesels—had stopped only minutes at a time, mainly for refueling or relieving crews. It was work which air travelers never saw at close hand because no aircraft used a fresh-cleared runway until the surface had been inspected and declared safe. Standards were exacting. Half an inch of slush or three inches of powdery snow were maximums allowable for jets. More than that would be sucked into engines and endanger operation.

It was a pity, Mel Bakersfeld reflected, that runway snow teams were not more on public view. The sight was spectacular and stirring. Even now, in storm and darkness, approaching the massed equipment from the rear, the effect was impressive. Giant columns of snow cascaded to the right in

arcs of a hundred and fifty feet. The arcs were framed in vehicle searchlights, and shimmered from the added color of some twenty revolving beacons—one on the roof of each vehicle in the group.

Airport men called the group a Conga Line.

It had a head, a tail, a body, and an entourage, and it progressed down a runway with the precision of choreography.

A convoy leader was the head. He was a senior foreman from airport maintenance and drove an airport car—bright yellow, like all other equipment in the Line. The leader set the Conga Line pace, which was usually fast. He had two radios and remained permanently in touch with the Snow Desk and Air Traffic Control. By a system of lights, he could signal drivers following—green for "speed up," amber for "maintain pace," red for "slow down," and flashing red for "stop." He was required to carry in his head a detailed map of the airport, and must know precisely where he was, even on the darkest night, as now.

Behind the convoy leader, its driver, like an orchestra's first violinist, was the number one plow—tonight a mammoth Oshkosh with a big main blade ahead, and a wing blade to the side. To the rear of number one plow, and on its right, was number two. The first plow heaved the snow aside; the second accepted the load from the first and, adding more, heaved both lots farther.

Then came a Snowblast, in echelon with the plows, six hundred roaring horsepower strong. A Snowblast cost sixty thousand dollars and was the Cadillac of snow clearance. With mighty blowers it engulfed the snow which both plows piled, and hurled it in a herculean arc beyond the runway's edge.

In a second echelon, farther to the right, were two more plows, a second Snowblast.

After the plows and Snowblasts came the graders—five in line abreast, with plow blades down to clear any mounds the front plows missed. The graders towed revolving brushes, each sixteen feet wide and independently diesel powered. The brushes scoured the runway surface like monstrous yard brooms.

Next were sanders. Where the eleven vehicles ahead had cleared, three hulking FWD trucks, with hoppers holding fourteen cubic yards apiece, spread sand out evenly.

The sand was special. Elsewhere around the airport, on

oadways and areas which the public used, salt was added to the sand as a means of melting ice. But never for aeronautical areas. Salt corroded metal, shortening its life, and airplanes were treated with more respect than cars.

Last in the Conga Line itself—"tail-end Charlie"—was an assistant foreman in a second car. His job was to insure that the line stayed intact and to chivvy stragglers. He was in radio touch with the convoy leader, often out of sight ahead in snow and darkness.

Finally came the entourage—a standby plow, in case one altered in the Line; a service truck with a detail of mechanics; refueling tankers—diesel and gasoline; and—when summoned by radio at appointed times—a coffee and doughnut wagon.

Mel accelerated around the entourage and positioned his car alongside the assistant foreman's. His arrival was noticed. He heard the convoy leader notified by radio, "Mr. Bakersfeld just joined us."

The Line was moving fast—close to forty miles an hour instead of its usual twenty-five. The leader had probably speeded up because of the expected wind shift and the need to have the runway open soon.

Switching his radio to ATC ground frequency, Mel heard the convoy leader call the tower, "... on one seven, left, approaching intersection with runway two five. Request clearance over intersection."

Runway two five was an active runway, now in use.

"Convoy leader from ground control, hold short of the intersection. We have two flights on final approach. You may not, repeat, not, cross runway intersection. Acknowledge."

The voice from the tower was apologetic. Up there, they understood the difficulty of stopping a rolling Conga Line, and getting it started again. But the approaching flights had undoubtedly made a tricky instrument descent and now were close to landing, one behind the other. Only a desperate emergency would justify sending them round again on such a night.

Ahead of Mel, red lights were going on, flashing commandingly as the Conga Line slowed and stopped.

The assistant foreman, a cheerful young Negro, jumped from his car and came across to Mel's. As he opened the door, the wind swept in, but could only be felt, not heard, above the encompassing roar of idling diesels. The assistant

put his mouth against Mel's ear. "Say, Mr. B., how's about joining the Line? One of the boys'll take care of your car."

Mel grinned. The pleasure he got, whenever he could spare time, from riding and occasionally handling heavy motorized equipment was well known around the airport. Why not? he reasoned. He had come out to inspect the snow clearance as a result of the adverse report by Vernon Demerest's Airlines Snow Committee. Clearly, the report was unjustified, and everything was going well. But maybe he should watch a few minutes longer from a ringside perch.

Nodding agreement, he shouted, "Okay, I'll ride the second Snowblast."

"Yessir!"

The assistant foreman, carrying a hand searchlight and leaning against the wind, preceded Mel past the now stationary lines of sand trucks and brushes. Mel observed that already fresh snow was starting to cover the runway area cleared only moments ago. To the rear, a figure ducked from a service truck and hastened to Mel's car.

"Better hurry, Mr. B. It's only a short stop." The young Negro flashed his light at the Snowblast cab, then held it steady, illuminating the way, as Mel clambered up. High above, the Snowblast driver opened the cab door and held it while Mel eased inside. On the way up, his impaired foot pained him sharply, but there was no time to wait. Ahead, the flashing red lights had already changed to green, and presumably the two approaching aircraft had now landed and were past the intersection. The Conga Line must hurry across before the next landing, perhaps only a minute or two away. Glancing to the rear, Mel could see the assistant foreman sprinting back toward his tail-end-Charlie car.

The Snowblast was already moving, picking up speed with a deep-throated roar. Its driver glanced sideways as Mel slipped into one of the two soft, padded seats.

"Hi, Mr. Bakersfeld."

"How are you, Will?" Mel recognized the man, who, when there was no snow emergency, was employed by the airport as a payroll clerk.

"I'm pretty good, sir. Tired some."

The driver was holding position carefully behind the third and fourth plows, their beacon lights just visible. Already the Snowblast's huge auger blades were engorging snow, cram-

ning it to the blower. Once more, a continuous white stream was arcing outward, clear of the runway.

Up here was like the bridge of a ship. The driver held his main control wheel lightly, like a helmsman. A multitude of dials and levers, glowing in the darkness, were arranged for fingertip control. Circular, high-speed windshield wipers—as on a ship—provided ports of clear vision through encrusted snow.

"I guess everyone's tired," Mel said. "All I can tell you is that this can't last forever."

He watched the forward speed needle climb—from twenty-five to thirty, thirty to thirty-five. Swinging in his seat, Mel surveyed outside. From this position, at the center of the Conga Line, he could see the lights and shapes of the other vehicles. He noted approvingly that the formation was exact.

A few years ago, in a storm like this, an airport would have closed completely. Now it didn't, mainly because ground facilities—in this one area—had caught up with progress in the air. But of how many areas of aviation could the same thing be said? Mel reflected ruefully: very few.

"Oh, well," the driver said, "it makes a change from working an adding machine, and the longer this keeps up, the more extra pay there'll be when it's over." He touched a lever, tilting the cab forward to inspect the auger blades. With another control he adjusted the blades, then leveled the cab. "I don't have to do this; you know that, Mr. Bakerafeld, I volunteer. But I kinda like it out here. It's sort of . . ." He hesitated. "I dunno."

Mel suggested, "Elemental?"

"I guess so." The driver laughed. "Maybe I'm snow happy."

"No, Will, I don't believe you are." Mel swung forward, facing the way the Conga Line was moving. It was elemental here. More to the point, amid the airfield's loneliness there was a feeling of closeness to aviation, the real aviation which in its simplest sense was man against the elements. You lost that kind of feeling if you stayed too long in terminals and airline office buildings; there, the extraneous, non-elemental things confused you. Maybe all of us in aviation management, Mel thought, should stand at the distant end of a runway once in a while, and feel the wind on our faces. It would be to separate detail from fundamentals. It might even clear our brains as well.

when he needed to think, to reason quietly and alone. He had not expected to tonight, but found himself doing so now . . . wondering, speculating, as he had so often in recent days, about the airport's future and his own.

8

Less than a lustrum ago, the airport was considered among the world's finest and most modern. Delegations inspected it admiringly. Civic politicians were given to pointing with pride and would huff and puff about "air leadership" and "a symbol of the jet age." Nowadays, the politicians still huffed and puffed, but with less reason. What most failed to realize was that Lincoln International, like a surprising number of other major airports, was close to becoming a whited sepulcher.

Mel Bakersfeld pondered the phrase *whited sepulcher* while riding in darkness down runway one seven, left. It was an apt definition, he thought. The airport's deficiencies were serious and basic, yet, since they were mostly out of public view, only insiders were aware of them.

Travelers and visitors at Lincoln International saw principally the main passenger terminal—a brightly lighted, air-conditioned Taj Mahal. Of gleaming glass and chrome, the terminal was impressively spacious, its thronged concourses adjoining elegant waiting areas. Opulent service facilities ringed the passenger area. Six specialty restaurants ranged from a gourmet dining room, with gold-edged china and matching prices, to a grab-it-and-run hot dog counter. Bars, cozily darkened or stand-up and neon lit, were plentiful as toilets. While waiting for a flight, and without ever leaving the terminal, a visitor could shop, rent a room and bed, and take a steam bath with massage, have his hair cut, suit pressed, shoes shined, or even die and have his burial arranged by Holy Ghost Memorial Gardens which maintained a sales office on the lower concourse.

Judged by its terminal alone, the airport was still spectacular. Where its deficiencies lay were in operating areas, notably runways and taxiways.

Few of the eighty thousand passengers who flew in and out each day were aware of how inadequate—and therefore hazardous—the runway system had become. Even a year pre-

viously, runways and taxiways were barely sufficient; now, they were dangerously overtaxed. In normally busy periods, on two main runways, a takeoff or landing occurred every thirty seconds. The Meadowood situation, and the consideration the airport showed to community residents, made it necessary, at peak periods, to use an alternative runway which bisected one of the other two. As a result, aircraft took off and landed on converging courses, and there were moments when air traffic controllers held their breath and prayed. Only last week Keith Bakersfeld, Mel's brother, had predicted grimly, "Okay, so we stay on our toes in the tower, and we cope with the hairy ones, and we haven't brought two airplanes together at that intersection yet. But someday there'll be a second's inattention or misjudgment, and one of us will. I hope to God it isn't me because when it happens it'll be the Grand Canyon all over again."

The intersection Keith had spoken of was the one which the Conga Line had just passed over. In the cab of the Snowblast, Mel glanced to the rear. The Conga Line was well clear of the intersection now, and, through a momentary gap in the snow, airplane navigation lights were visible on the other runway, moving swiftly as a flight took off. Then, incredibly, there were more lights only a few yards behind as another flight landed, it seemed at the same instant.

The Snowblast driver had turned his head also. He whistled. "Those two were pretty close."

Mel nodded. They *had* been close, exceptionally so, and for an instant his flesh had prickled with alarm. Obviously, what had happened was that an air traffic controller, instructing the pilots of both airplanes by radio, had cut tolerances exceedingly fine. As usual, the controller's skilled judgment had proven right, though only just. The two flights were safe—one now in the air, the other on the ground. But it was the need for a multiplicity of such hairbreadth judgments which created an unceasing hazard.

Mel had pointed out the hazard frequently to the Board of Airport Commissioners and to members of City Council, who controlled airport financing. As well as immediate construction of more runways and taxiways, Mel had urged purchase of additional land around the airport for long term development. There had been plenty of discussion, and sometimes angry argument, as a result. A few Board and Council members saw things the way Mel did, but others took a stronger

when he needed to think, to reason quietly and alone. He had not expected to tonight, but found himself doing so now . . . wondering, speculating, as he had so often in recent days, about the airport's future and his own.

The intersection Keith had spoken of was the one which the Conga Line had just passed over. In the cab of the Snowblast, Mel glanced to the rear. The Conga Line was well clear of the intersection now, and, through a momentary gap in the snow, airplane navigation lights were visible on the other runway, moving swiftly as a flight took off. Then, incredibly, there were more lights only a few yards behind as another flight landed, it seemed at the same instant.

The Snowblast driver had turned his head also. He whistled. "Those two were pretty close."

Mel nodded. They *had* been close, exceptionally so, and for an instant his flesh had prickled with alarm. Obviously, what had happened was that an air traffic controller, instructing the pilots of both airplanes by radio, had cut tolerances exceedingly fine. As usual, the controller's skilled judgment had proven right, though only just. The two flights were safe—one now in the air, the other on the ground. But it was the need for a multiplicity of such hairbreadth judgments which created an unceasing hazard.

Mel had pointed out the hazard frequently to the Board of Airport Commissioners and to members of City Council, who controlled airport financing. As well as immediate construction of more runways and taxiways, Mel had urged purchase of additional land around the airport for long term development. There had been plenty of discussion, and sometimes angry argument, as a result. A few Board and Council mem-

counter view. It was hard to convince people that a modern jetport, built in the late 1950s, could so quickly have become inadequate to the point of danger. It made no difference that the same was true of other centers—New York, San Francisco, Chicago, and elsewhere; there were certain things which politicians simply did not want to see.

Mel thought: maybe Keith was right. Perhaps it would take another big disaster to arouse public awareness, just as the 1956 Grand Canyon disaster had spurred President Eisenhower and the Eighty-fourth Congress to revamp the airways. Yet, ironically, there was seldom any difficulty in getting money for non-operational improvements. A proposal to triple-deck all parking lots had won city approval without dissent. But that was something which the public—including those who had votes—could see and touch. Runways and taxiways were different. A single new runway cost several million dollars and took two years to build, yet few people other than pilots, air traffic controllers, and airport management, ever knew how good or bad a runway system was.

But at Lincoln International a showdown was coming soon. It had to. In recent weeks, Mel had sensed the signs, and when it happened the choice would be clear—between advancement on the ground, matching new achievements in the air, or impotently drifting backward. In aviation, there was never a status quo.

There was another factor.

As well as the airport's future, Mel's personal future was at stake. Whichever way airport policies veered, so would his own prestige advance or lessen in places where it counted most.

Only a short time ago, Mel Bakersfeld had been a national spokesman for ground logistics of aviation, had been touted as the rising young genius in aviation management. Then, abruptly, a single, calamitous event had wrought a change. Now, four years later, the future was no longer clear, and there were doubts and questioning about Mel Bakersfeld, in others' minds as well as in his own.

The event which caused the change was the John F. Kennedy assassination.

"Here's the end of the runway, Mr. Bakersfeld. You riding back with us, or what?" The voice of the Snowblast driver broke in on Mel's reverie.

"Hm?"

The man repeated his question. Ahead of them, once more, warning lights were flashing on, the Conga Line showing. Half the width of a runway was cleared at one time. Now, the Line would reverse itself and go back the way it had come, clearing the remaining portion. Allowing for stops and starts, it took forty-five minutes to an hour to plow and sand a single runway.

"No," Mel said. "I'll get off here."

"Right, sir." The driver directed a signal light at the assistant foreman's car which promptly swung out of line. A few moments later, as Mel clambered down, his own car was waiting. From other plows and trucks, crews were descending and hurrying to the coffee wagon.

Driving back toward the terminal, Mel radioed the Snow Desk, confirming to Danny Farrow that runway one seven, left, would be usable shortly. Then, switching to ATC ground control, he turned the volume low, the subdued, level voices a background to his thoughts.

In the Snowblast cab he had been reminded of the event which, of all others he remembered, had struck with greatest impact.

It had been four years ago.

He thought, startled, was it really that long ago?—four years since the gray November afternoon when, dazedly, he had pulled the p.a. microphone across his desk toward him—the microphone, rarely used, which overrode all others in the terminal—and cutting in on a flight arrival bulletin, had announced to concourses which swiftly hushed, the shattering news which seconds earlier had flashed from Dallas.

His eyes, as he spoke then, had been on the photograph on the facing wall across his office, the photograph whose inscription read: *To my friend Mel Bakersfeld, concerned, as I am, with attenuating the surly bonds of earth—John F. Kennedy.*

The photograph still remained, as did many memories.

The memories began, for Mel, with a speech he had made in Washington, D.C.

At the time, as well as airport general manager, he had been president of the Airport Operators Council—the youngest leader, ever, of that small but influential body linking major airports of the world. AOC headquarters was in Washington, and Mel flew there frequently.

His speech was to a national planning congress

Aviation, Mel Bakersfeld had pointed out, was the only truly successful international undertaking. It transcended ideological boundaries as well as the merely geographic. Because it was a means of intermingling diverse populations at ever-diminishing cost, it offered the most practical means to world understanding yet devised by man.

Even more significant was aerial commerce. Movement of freight by air, already mammoth in extent, was destined to be greater still. The new, giant jet airplanes, to be in service by the early 1970s, would be the fastest and cheapest cargo carriers in human history; within a decade, oceangoing ships might be dry-dock museum pieces, pushed out of business in the same way that passenger airplanes had clobbered the *Queen Mary* and *Elizabeth*. The effect could be a new, worldwide argosy of trade, with prosperity for now impoverished nations. Technologically, Mel reminded his audience, the airborne segment of aviation offered these things, and more, within the lifetimes of today's middle-aged people.

Yet, he had continued, while airplane designers wove the stuff of dreams into fabrics of reality, facilities on the ground remained, for the most part, products of shortsightedness or misguided haste. Airports, runway systems, terminals, were geared to yesterday, with scant—if any—provision for tomorrow; what was lost sight of, or ignored, was the juggernaut speed of aviation's progress. Airports were set up piecemeal, as individually as city halls, and often with as small imagination. Usually, too much was spent on showplace terminals, too little on operating areas. Coordinated, high-level planning, either national or international, was non-existent.

At local levels, where politicians were apathetic about problems of ground access to airports, the situation was as bad, or worse.

"We have broken the sound barrier," Mel declared, "but not the ground barrier."

He listed specific areas for study and urged international planning—U.S. led and presidentially inspired—for aviation on the ground.

The speech was accorded a standing ovation and was widely reported. It produced approving nods from such diverse sources as *The Times* of London, *Pravda*, and *The Wall Street Journal*.

The day after the speech, Mel was invited to the White House.

The meeting with the President had gone well. It had been a relaxed, good-humored session in the private study on the White House second floor. J.F.K., Mel found, shared many of his own ideas.

Subsequently, there were other sessions, some of them "brain trust" affairs involving Kennedy aides, usually when the Administration was considering aviation matters. After several such occasions, with informal aftermaths, Mel was at home in the White House, and less surprised than he had been at first to find himself there at all. As time went on, he drifted into one of those easygoing relationships which J.F.K. encouraged among those with expertise to offer him.

It was a year or so after their first encounter that the President sounded Mel out about heading the Federal Aviation Agency. (It was an Agency then, an Administration later.) Sometime during the Kennedy second term, which everyone assumed would be automatic, the incumbent FAA Administrator, Halaby, would move on to other things. How did Mel feel about implementing, from within, some of the measures he had advocated from without? Mel had replied that he was very interested indeed. He made it clear that if an offer were made, his answer would be yes.

Word filtered out, not from Mel, but through others who had had it from the top. Mel was "in"—a dues-paid member of the inner circle. His prestige, high before, went higher still. The Airport Operators Council re-elected him president. His own airport commissioners voted him a handsome raise. Barely in his late thirties, he was considered the Childe Roland of aviation management.

Six months later, John F. Kennedy made his fateful Texas journey.

Like others, Mel was first stunned, then later wept. Only later still, did it dawn on him that the assassin's bullets had ricocheted onto the lives of others, his own among them. He discovered he was no longer "in" in Washington. Najeeb Halaby did, in fact, move on from FAA—to a senior vice-presidency of Pan American—but Mel did not succeed him. By then, power had shifted, influences waned. Mel's name, he later learned, was not even on President Johnson's short list for the FAA appointment.

Mel's second tenure as AOC president ran out unevent-

limited to local ones, and, in a way, he found the change to be a relief. His own responsibilities at Lincoln International had already increased as air traffic proliferated beyond most expectations. He became intensely occupied with planning, coupled with efforts to persuade the Board of Airport Commissioners to his own viewpoints. There was plenty to think about, including troubles at home. His days and weeks and months were full.

And yet, there was a sense that time and opportunity had passed him by. Others were aware of it. Unless something dramatic occurred, Mel surmised, his career might continue, and eventually end, precisely where he was.

"Tower to mobile one—what is your position?" The radio enjoiner broke through Mel's thoughts, returning him abruptly to the present.

He turned up the radio volume and reported. By now, he was nearing the main passenger terminal, its lights becoming clearer, despite the still heavily falling snow. The aircraft parking areas, he observed, were as fully occupied as when he left, and there was still a line of arriving aircraft waiting for gate positions to be vacated.

"Mobile one, hold until the Lake Central Nord crosses ahead of you, then follow it in."

"This is mobile one. Roger."

A few minutes later, Mel eased his car into the terminal basement parking area.

Near his parking stall was a locked box with an airport telephone. He used one of his passkeys to open the box, and dialed the Snow Desk. Danny Farrow answered. Was there any fresh news, Mel inquired, about the mired Aéreo-Mexican jet?

"Negative," Danny said. "And the tower chief said to tell you that not being able to use runway three zero is still slowing traffic fifty percent. Also, he's getting more phone complaints from Meadowood every time there's a takeoff over there."

Mel said grimly, "Meadowood will have to suffer." Community meeting or not, there was nothing he could do to eliminate overhead noise for the time being. The most important thing at the moment was to reduce the lag in operations. "Where's Joe Patroni now?"

"Same place. Still held up."

"Can he make it for sure?"

"TWA says so. He has a phone in his car, and they've been in touch."

"As soon as Joe gets here," Mel instructed, "I want to be notified. Wherever I am."

"That'll be downtown, I guess."

Mel hesitated. There was no reason, he supposed, why he need remain at the airport any longer tonight. Yet again, inaccountably, he had the same sense of foreboding which had disturbed him on the airfield. He remembered his conversation earlier with the tower watch chief, the line of waiting aircraft on the ramp apron outside. He made a spontaneous decision.

"No, I won't be downtown. We need that runway badly, and I'm not leaving until I know positively that Patroni is out there on the field, in charge."

"In that case," Danny said, "I suggest you call your wife right now. Here's the number she's at."

Mel wrote it down, then depressed the receiver rest and dialed the downtown number. He asked for Cindy, and after a brief wait, heard her voice say sharply, "Mel, why aren't you here?"

"I'm sorry, I was held up. There've been problems at the airport. It's a pretty big storm . . ."

"Damn you, *get down here fast!*"

From the fact that his wife's voice was low, Mel deduced there were others within hearing. Just the same, she managed to convey a surprising amount of venom.

Mel sometimes tried to associate the voice of Cindy nowadays with the Cindy he remembered before their marriage fifteen years ago. She had been a gentler person then, it seemed to him. In fact, her gentleness had been one of the things which appealed to Mel when they first met in San Francisco, he on leave from the Navy and Korea. Cindy had been an actress at the time, though in a minor way because the career she had hoped for had not worked out, and clearly wasn't going to. She had had a succession of diminishingly small parts in summer stock and television, and afterward, in a moment of frankness, admitted that marriage had been a welcome release from the whole thing.

Years later, that story changed a little, and it became a favorite gambit of Cindy's to declare that she had sacrificed her career and probable stardom because of Mel. Recently, though, Cindy didn't like her past as an

mentioned at all. That was because she had read in *Town and Country* that actresses were seldom, if ever, included in *The Social Register*, and addition of her own name to the *Register* was something Cindy wanted very much indeed.

"I'm coming downtown to join you just as soon as I can," Mel said.

Cindy snapped, "That isn't good enough. You should be here already. You knew perfectly well that tonight was important to me, and a week ago you made a definite promise."

"A week ago I didn't know we were going to have the biggest storm in six years. Right now we've a runway out of use, there's a question of airport safety . . ."

"You've people working for you, haven't you? Or are the ones you've chosen so incompetent they can't be left alone?"

Mel said irritably, "They're highly competent. But I get paid to take some responsibility, too."

"It's a pity you can't act responsibly to me. Time and again I make important social arrangements which you enjoy demolishing."

Listening, as the words continued, Mel sensed that Cindy was getting close to boiling point. Without any effort, he could visualize her now, five feet six of imperious energy in her highest heels, clear blue eyes flashing, and her blonde coiffed head tilted back in that damnably attractive way she had when she was angry. That was one reason, Mel supposed, why, in their early years of marriage, his wife's temper outbursts seldom dismayed him. The more heated she became, it always seemed, the more desirable she grew. At such moments, he had invariably let his eyes rove upward, beginning at her ankles—not hurriedly, because Cindy possessed extraordinarily attractive ankles and legs; in fact, better than those of most other women Mel knew—to the rest of her which was just as proportionate and physically appealing.

In the past, when his eyes had made their appreciative assessment, some two-way physical communion sprang into being, prompting each to reach out, to touch one another, impulsively, hungrily. The result was predictable. Invariably, the origin of Cindy's anger was forgotten in a wave of sensuality which engulfed them. Cindy had an exciting, insistent savagery, and in their lovemaking would demand, "*Hurt me, goddam you, hurt me!*" At the end, they would be spent and drained, so that picking up the skein of a quarrel was more than either had the wish or energy to do.

It was, of course, a way of shelving, rather than resolving, differences which—Mel realized, even early on—were fundamental. As the years passed, and passion lessened, accumulated differences became more sharply accented.

Eventually, they ceased entirely to use sex as a panacea and, in the past year or so, physical intimacy of any kind had become more and more occasional. Cindy, in fact, whose bodily appetites had always needed satisfying whatever the state of mind between them, appeared in recent months to have become indifferent altogether. Mel had wondered about that. Had his wife taken a lover? It was possible, and Mel supposed he ought to care. The sad thing was, it seemed easier not to be concerned.

Yet there were still moments when the sight or sound of Cindy in her willful anger could stir him physically, arousing old desires. He had that feeling now as he listened to her excoriating voice on the telephone.

When he was able to cut in, he said, "It isn't true that I enjoy demolishing your arrangements. Most of the time I go along with what you want, even though I don't think the things we go to are all that important. What I would enjoy are a few more evenings at home with the children."

"That's a lot of crap," Cindy said, "and you know it."

He felt himself tense, gripping the telephone more tightly. Then he conceded to himself: perhaps the last remark was true, to an extent. Earlier this evening he had been reminded of the times he had stayed at the airport when he could have gone home—merely because he wanted to avoid another fight with Cindy. Roberta and Libby had got left out of the reckoning then, as children did, he supposed, when marriages went sour. He should not have mentioned them.

But apart from that, tonight *was* different. He ought to stay on at the airport, at least until it became known for sure what was happening about the blocked runway.

"Look," Mel said, "let's make one thing clear. I haven't told you this before, but last year I kept some notes. You wanted me to come to fifty-seven of your charitable whingdings. Out of that I managed forty-five, which is a whole lot more than I'd attend from choice, but it isn't a bad score."

"You bastard! I'm not a ball game where you keep a scorecard. I'm your wife."

Mel said sharply, "Take it easy!" He was becoming angry.

voice. Do you want all those nice people around to know what kind of a heel you have for a husband?"

"I don't give a goddam!" But she said it softly, just the same.

"I do know you're my wife, which is why I intend to go down there just as soon as I can." What would happen, Mel wondered, if he could reach out and touch Cindy now? Would the old magic work? He decided not. "So save me a place and tell the waiter to keep my soup warm. Also, apologize and explain why I'm late. I presume some of the people there have heard there is an airport." A thought struck him. "Incidentally, what's the occasion tonight?"

"I explained last week."

"Tell me again."

"It's a publicity party—cocktails and dinner—to promote the costume ball which is being given next month for the Archidona Children's Relief Fund. The press is here. They're taking photographs."

Now Mel knew why Cindy wanted him to hurry. With him there, she stood a better chance of being in the photograph—and on tomorrow's newspaper social pages.

"Most other committee members," Cindy insisted, "have their husbands here already."

"But not all?"

"I said most."

"And you did say the Archidona Relief Fund?"

"Yes."

"Which Archidona? There are two. One's in Ecuador, the other in Spain." At college, maps and geography had fascinated Mel, and he had a retentive memory.

For the first time, Cindy hesitated. Then she said testily, "What does it matter? This isn't the time for stupid questions."

Mel wanted to laugh out loud. *Cindy didn't know.* As usual, she had chosen to work for a charity because of what was involved, rather than what.

He said maliciously, "How many letters do you expect to get from this one?"

"I don't know what you mean."

"Oh, yes, you do."

To be considered for listing in *The Social Register*, a neophyte aspirant needed eight sponsoring letters from people whose names already appeared there. At the last count Mel had heard, Cindy had collected four.

"By God, Mel, if you say anything—tonight or any other time . . ."

"Will the letters be free ones, or do you expect to pay for them like those other two?" He was aware of having an advantage now. It happened very rarely.

Cindy said indignantly, "That's a filthy allegation. It's impossible to buy your way in . . ."

"Nuts!" Mel said. "I get the canceled checks from our joint account. Remember?"

There was a silence. Then Cindy asserted, low-voiced and savagely, "Listen to me! You'd better get here tonight, and soon. If you don't come, or if you do come and embarrass me by saying anything of what you did just now, it'll be the end. Do you understand?"

"I'm not sure that I do." Mel spoke quietly. Instinct cautioned him that this was an important moment for them both. "Perhaps you'd better tell me exactly what you mean."

Cindy countered, "You figure it out."

She hung up.

On his way from the parking area to his office, Mel's fury seethed and grew. Anger had always come to him less quickly than to Cindy. He was the slow-burn type. But he was burning now.

He was not entirely sure of the focus of his anger. A good deal was directed at Cindy, but there were other factors, too: His professional failure, as he saw it, to prepare effectually for a new era of aviation; a seeming inability to infuse others any longer with his own convictions; high hopes, unfulfilled. Somehow, between them all, Mel thought, his personal and professional lives had become twin testaments to inadequacy. His marriage was on the rocks, or apparently about to go there; if and when it did, he would have failed his children, also. At the same time, at the airport, where he was trustee for thousands who passed through daily in good faith, all his efforts and persuasion had failed to halt deterioration. There, the high standards he had worked to build were eroding steadily.

En route to the executive mezzanine, he encountered no one he knew. It was just as well. If he had been spoken to, whatever question had been put, he would have answered.

cigarette. It had an acrid taste, and he stubbed it out. As he crossed to his desk, he was aware that the pain in his foot had returned, increasingly.

There was a time—it seemed long ago—when on nights like this, if his wounded foot pained him, he would have gone home, where Cindy would have insisted he relax. He would have a hot bath first, then after, while he lay face downward on their bed, she would massage his back and neck with cool, firm fingers until pain ebbed out of him. It was unthinkable, of course, that Cindy would ever do the same thing again; but even if she did, he doubted that it would work. You could lose communication in other ways besides the spoken word.

Seated at his desk, Mel put his head in his hands.

As he had done on the airfield earlier, he shivered. Then, abruptly in the silent office, a telephone bell jangled. For a moment he ignored it. It rang again, and he realized it was the red alarm system telephone on a stand beside the desk. In two swift strides he reached it.

"Bakersfeld here."

He heard clicks and more acknowledgments as others came on the line.

"This is Air Traffic Control," the tower chief's voice announced. "We have an airborne emergency, category three."

9

Keith Bakersfeld, Mel's brother, was a third of the way through his eight-hour duty watch in the air traffic control radar room.

In radar control, tonight's storm was having a profound effect, though not a directly physical one. To a spectator, Keith thought, lacking an awareness of the complex story which a conglomeration of radarscopes was telling, it might have seemed that the storm, raging immediately outside, was a thousand miles away.

The radar room was in the control tower, one floor down from the glass-surrounded eyrie—the tower cab—from which ATC directed aircraft movement on the ground and immediate local flying. The radar section's jurisdiction extended beyond the airport, and radar controllers reached out to

bridge the gap between local control and the nearest ATC regional center. The regional centers—usually miles from any airport—controlled main trunk airways and traffic coming on and off them.

In contrast to the top portion of the tower, the radar room had no windows. Day and night, at Lincoln International, ten radar controllers and supervisors labored in perpetual semidarkness under dim moonglow lights. Around them, tightly packed equipment—radarscopes, controls, radio communications panels—lined all four walls. Usually, controllers worked in shirtsleeves since the temperature, winter or summer, was maintained at an even seventy degrees to protect the delicate electronic gear.

The pervading tone in the radar room was calm. However, beneath the calmness, at all times, was a constant nervous strain. Tonight, the strain had been added to by the storm and, within the past few minutes, it had heightened further still. The effect was like stretching an already tensioned spring.

Cause of the added tension was a signal on a radarscope which, in turn, had triggered a flashing red light and alarm buzzer in the control room. The buzzer had now been silenced, but the distinctive radar signal remained. Known as a double blossom, it had flowered on the semidarkened screen like a tremulous green carnation and denoted an aircraft in distress. In this case, the aircraft was a U. S. Air Force KC-135, high above the airport in the storm, and seeking an immediate emergency landing. Keith Bakersfeld had been working the flatface scope on which the emergency signal appeared, and a supervisor had since joined him. Both were now transmitting urgent, swift decisions—by interphone to controllers at adjoining positions, and by radio to other aircraft.

The tower watch chief on the floor above had been promptly informed of the distress signal. He, in turn, had declared a category three emergency, alerting airport ground facilities.

The flatface scope, at the moment the center of attention, was a horizontal glass circle, the size of a bicycle tire, set into a tabletop console. Its surface was dark green, with brilliant green points of light showing all aircraft in the air within a forty-mile radius. As the aircraft moved, so did the points of light. Beside each light point

marker, identifying it. The markers were known colloquially as "shrimp boats" and controllers moved them by hand as aircraft progressed and their positions on the screen changed. As more aircraft appeared, they were identified by voice radio and similarly tagged. New radar systems dispensed with shrimp boats; instead, identifying letter-number codes—including altitude—appeared directly on the radar screen. But the newer method was not yet in wide use and, like all new systems, had bugs which needed elimination.

Tonight there was an extraordinary number of aircraft on the screen, and someone had remarked earlier that the green pinpoints were proliferating like fecund ants.

Keith was seated closest to the flatface, his lean, spindly figure hunched forward in a gray steel chair. His body was tense; his legs, hooked underneath the chair, were as rigid as the chair itself. He was concentrating, his face strained and gaunt, as it had been for months. The green reflection of the scope accentuated, eerily, deep hollows beneath his eyes. Anyone who knew Keith well, but had not seen him for a year or so, would have been shocked both by his appearance and his change in manner. Once, he had exuded an amiable, relaxed good-nature; now, all signs of it were gone. Keith was six years younger than his brother, Mel, but nowadays appeared a good deal older.

The change in Keith Bakersfeld had been noticed by his colleagues, some of whom were working tonight at other control positions in the radar room. They were also well aware of the reason for the change, a reason which had evoked genuine sympathy. However, they were practical men with an exacting job, which was why the radar supervisor, Wayne Tevis, was observing Keith covertly at this moment, watching the signs of increasing strain, as he had for some time. Tevis, a lanky, drawling Texan, sat centrally in the radar room on a high stool from where he could peer down over the shoulders of operators at the several radarscopes serving special functions. Tevis had personally equipped the stool with castors, and periodically he rode it like a horse, propelling himself by jabs of his hand-tooled Texan boots wherever he was needed at the moment.

During the preceding hour, Wayne Tevis had at no point moved far away from Keith. The reason was that Tevis was ready, if necessary, to relieve Keith from radar watch, a

decision which instinct told him might have to be made at any time.

The radar supervisor was a kindly man, despite his mild flamboyance. He dreaded what he might have to do, and was aware of how far-reaching, for Keith, its effect could be. Nevertheless, if he had to, he would do it.

His eyes on Keith's flatface scope, Tevis drawled, "Keith, old son, that Braniff flight is closing on Eastern. If you turn Braniff right, you can keep Eastern going on the same course." It was something which Keith should have seen himself, but hadn't.

The problem, which most of the radar room crew was working at feverishly, was to clear a path for the Air Force KC-135, which had already started down on an instrument landing approach from ten thousand feet. The difficulty was—below the big Air Force jet were five airline flights, stacked at intervals of a thousand feet, and orbiting a limited airspace. All were awaiting their turn to land. A few miles on either side were other columns of aircraft, similarly stacked and, lower still, were three more airliners, already on landing approaches. In between them all were busy departure corridors. Somehow, the military flight had to be threaded down through the stacked civilian airplanes without a collision occurring. Under normal conditions the assignment would test the strongest nerves. As it was, the situation was complicated by radio failure in the KC-135, so that voice contact with the Air Force pilot had been lost.

Keith Bakersfeld thumbed his microphone. "Braniff eight twenty-nine, make an immediate right turn, heading zero-niner-zero." At moments like this, even though pressures built to fever pitch, voices should stay calm. Keith's voice was high-pitched and betrayed his nervousness. He saw Wayne Tevis glance at him sharply. But the blips on the radar screen, which had been uncomfortably close, began separating as the Braniff captain obeyed instructions. There were moments—this was one—when air traffic controllers thanked whatever gods they acknowledged for the swift, alert responses of airline pilots. The pilots might beef, and often did subsequently, at being given sudden course changes which required tight, abrupt turns and shook up passengers. But when a controller gave the order "*immediate*," they obeyed instantly and argued later.

In another minute or so the Braniff flight would have to

be turned again, and so would Eastern, which was at the same level. Even before that, there must be new courses for two TWAs—one higher, the other lower—plus a Lake Central Convair, an Air Canada Vanguard, and a Swissair just coming on the screen. Until the KC-135 had come through, these and others must be given zigzag courses, though for brief distances only, since none must stray into adjoining airspaces. In a way, it was like an intricate chess game, except that all the pieces were at various levels and moving at several hundred miles an hour. Also as part of the game, pieces had to be raised or lowered while they still moved forward, yet none must come closer than three miles laterally or a thousand feet vertically from another, and none must go over the edge of the board. And while all of it happened, the thousands of passengers, anxious for their journeys to end, had to sit in their airborne seats—and wait.

In occasional moments of detachment, Keith wondered how the Air Force pilot, in difficulty and letting down through storm and crowded airspace, was feeling at this moment. Lonely, probably. Just as Keith himself was lonely; just as all life was lonely, even with others physically close beside you. The pilot would have a co-pilot and crew, in the same way that Keith had fellow-workers who, at this moment, were near enough to touch. But that was not the kind of nearness which counted. Not when you were alone in that inner room of the mind, where no one else could enter, and where you lived—apart and solitary—with awareness, memory, conscience, fear. Alone, from the moment you were born until you died. Always, and forever, alone.

Keith Bakersfeld knew how much alone a single human being could be.

In succession, Keith gave fresh courses to Swissair, one of the TWAs, Lake Central, and Eastern. Behind him he could hear Wayne Tevis trying to raise the Air Force KC-135 on radio again. Still no response, except that the distress radar blip, actuated by the KC-135 pilot, still blossomed on the scope. The position of the blip showed the pilot was doing the right thing—following exactly the instructions he had been given before the radio failure happened. In doing so, he would be aware that air traffic control could anticipate his movements. He would also know that his position could be seen by radar on the ground, and trusted that other traffic would be routed out of his way.

The Air Force flight, Keith knew, had originated in Hawaii and come non-stop after mid-air refueling over the West Coast, its destination Andrews Air Force Base, near Washington. But west of the Continental Divide there had been an engine failure, and afterward electrical trouble, causing the airplane commander to elect an unscheduled landing at Smoky Hill, Kansas. At Smoky Hill, however, snow clearance of runways had not been completed, and the KC-135 was diverted to Lincoln International. Air Route Control nursed the military flight northeast across Missouri and Illinois. Then, thirty miles out, West Arrivals Control, in the person of Keith Bakersfeld, took over. It was soon afterward that radio failure had been added to the pilot's other troubles.

Most times, when flying conditions were normal, military aircraft stayed clear of civil airports. But in a storm like tonight's help was asked—and given—without question.

In this darkened, tightly packed radar room, other controllers, as well as Keith, were sweating. Yet no hint of pressures or tension must be betrayed by controllers' voices when speaking with pilots in the air. The pilots had plenty to concern themselves with at any time. Tonight, buffeted by the storm, and flying solely on instruments with nil visibility outside their cockpits, demands upon their skill were multiplied. Most pilots had already flown extra time because of delays caused by heavy traffic; now they would have to stay even longer in the air.

From each radar control position a swift, quiet stream of radio orders was going out to hold even more flights clear of the danger area. The flights were awaiting their own turn to land and every minute or two were being joined by new arrivals coming off airways. *A controller, his voice low but urgent, called over his shoulder. "Chuck, I've got a hot one. Can you take Delta seven three?"* It was a controller's way of saying he was in trouble and had more than he could handle. *Another voice. "Hell!—I'm piled up, too . . . Wait! . . . Affirmative, I got it."* *A second's pause. "Delta seven three from Lincoln approach control. Turn left; heading one two zero. Maintain altitude, four thousand!"* Controllers helped each other when they could. A few minutes from now the second man might need help himself. *"Hey, watch that Northwest; he's coming through from the other side. Christ! it's getting like the Outer Drive at rush hour."* . . . *"American four four,*

he would ever face a radarscope or stand a watch. Today was his last day with air traffic control. It would be over soon.

It was also the last day of his life.

"Take a break, Keith." It was the tower watch chief's voice.

Keith had not seen the tower chief come in. He had done so unobtrusively, and was standing by Wayne Tevis, the radar supervisor.

A moment earlier, Tevis had told the tower chief quietly, "Keith's all right, I reckon. For a few minutes I was worried, but he seemed to pull together." Tevis was glad he had not had to take the drastic action he had contemplated earlier, but the tower chief murmured, "Let's take him off a while, anyway"; and, as an afterthought, "I'll do it."

Glancing at the two men together, Keith knew at once why he was being relieved. There was still a crisis, and they didn't trust him. The work break was a pretext; he wasn't due for one for half-an-hour. Should he protest? For a controller as senior as himself, it was an indignity which others would notice. Then he thought: Why make an issue now? It wasn't worth it. Besides, a ten-minute break would steady him. Afterward, when the worst of the emergency was over, he could return to work for the remainder of his shift.

Wayne Tevis leaned forward. "Lee will take over, Keith." He motioned to another controller who had just returned from his own work break—a scheduled one.

Keith nodded, without comment, though he remained in place and continued to give radio instructions to aircraft while the new man got the picture. It usually took several minutes for one controller to hand over to another. The man coming in had to study the radar display, letting the over-all situation build in his mind. He also needed to become mentally tensed.

Getting tensed—consciously and deliberately—was a part of the job. Controllers called it "sharpening to an edge," and in Keith's fifteen years in air traffic control, he had watched it happen regularly, to others and to himself. You did it, because you had to, when you took over a duty, as now. At other times it became a reflex action, such as when controllers drove to work together—in car pools, as some did. On leaving home, conversation would be relaxed and normal. At that point in the journey, a casual question like, "Are you going to the ball game Saturday?" would elicit an equally

casual answer—"Sure am," or "No, I can't make it this week." Yet, nearing the job, conversation tautened, so that the same question—a quarter mile from the airport—might produce a terse "affirmative" or "negative," and nothing more.

Coupled with tense mental sharpness was another requirement—a controlled, studied calmness at all times on duty. The two requirements—contradictory in terms of human nature—were exhausting mentally and, in the long run, took a toll. Many controllers developed stomach ulcers which they concealed through fear of losing their jobs. As part of the concealment, they paid for private medical advice instead of seeking free medical help to which their employment entitled them. At work, they hid bottles of Maalox—"for the relief of gastric hyperacidity"—in their lockers and, at intervals, sipped the white, sweetish fluid surreptitiously.

There were other effects. Some controllers—Keith Bakersfeld knew several—were mean and irascible at home, or flew into rages, as a reaction to pent-up emotions at work. Coupled with irregular hours of working and sleeping, which made it difficult to regulate a household, the effect was predictable. Among air traffic controllers, the list of broken homes was long, divorce rates high.

"Okay," the new man said. "I have the picture."

Keith slid out from his seat, disconnecting his headset as the relieving controller took his place. Even before the newcomer was seated, he had begun transmitting fresh instructions to the lower TWA.

The tower chief told Keith, "Your brother said he might drop around later."

Keith nodded as he left the radar room. He felt no resentment against the tower chief, who had his own responsibilities to contend with, and Keith was glad he had made no protest about being relieved prematurely. More than anything else at the moment, Keith wanted a cigarette, some coffee, and to be alone. He was also glad—now the decision had been made for him—to be away from the emergency situation. He had been involved in too many in the past to regret missing the culmination of one more.

Air traffic emergencies of one kind or another occurred several times a day at Lincoln International, as they did at any major airport. They could happen in any kind of weather

—on the clearest day, as well as during a storm like tonight's. Usually, only a few people knew about such incidents, because almost all were resolved safely, and even pilots in the air were seldom told the reason for delays or abrupt instructions to turn this way or that. For one thing, there was no need for them to know; for another, there was never time for radio small talk. Ground emergency staffs—crash crews, ambulance attendants, and police—as well as airport senior management, were always alerted, and the action they took depended on the category of emergency declared. Category one was the most serious, but was rarely invoked, since it signaled an actual crash. Category two was notification of imminent danger to life, or physical damage. Category three, as now, was a general warning to airport emergency facilities to stand by; they might be needed, or they might not. For controllers, however, any type of emergency involved additional pressures and aftereffects.

Keith entered the controllers' locker room which adjoined the radar control room. Now that he had a few minutes to think more calmly, he hoped, for the sake of everyone, that the Air Force KC-135 pilot, and all others in the air tonight, made it safely down through the storm.

The locker room, a small cubicle with a single window, had three walls of metal lockers, and a wooden bench down the center. A notice board beside the window held an untidy collection of official bulletins and notices from airport social groups. An unshaded light bulb in the ceiling seemed dazzling after the radar room's semidarkness. No one else was in the locker room, and Keith reached for the light switch and turned it off. There were floodlights on the tower outside, and enough light came in for him to see.

He lit a cigarette. Then, opening his locker, he took out the lunch pail which Natalie had packed before his departure from home this afternoon. As he poured coffee from a Thermos, he wondered if Natalie had put a note in with his meal, or, if not a note, some inconsequential item she had clipped from a newspaper or a magazine. She often did one or both, hoping, he supposed, that it might cheer him. She had worked hard at doing that, right from the beginning of his trouble. At first, she had used obvious means; then, when those hadn't worked, less obvious ones, though Keith had always realized—in a detached, dispassionate kind of way—exactly what

Natalie was doing, or trying to. More recently, there had been fewer notes and clippings.

Perhaps Natalie, too, had finally lost heart. She had had less to say lately, and he knew, from the redness of her eyes, there were times she had been crying.

Keith had wanted to help her when he saw it. But how could he—when he couldn't help himself?

A picture of Natalie was taped to the inside of his locker door—a snapshot, in color, which Keith had taken. He had brought it here three years ago. Now, the light from outside shone on the picture only dimly, but he knew it so well, he could see what was there, whether highlighted or not.

The picture showed Natalie in a bikini. She was seated on a rock, laughing, one slim hand held above her eyes to shield them from the sun. Her light brown hair streamed behind her small, pert face showed the freckles which always appeared in summer. There was an impudent, pixyish quality to Natalie Bakersfeld, as well as strength of will, and the camera had caught both. In the rear of the picture was a blue-water lake, high firs, and a rocky outcropping. They had been on a motoring holiday in Canada, camping among the Haliburton lakes, and for once their children, Brian and Theo, had been left behind in Illinois, with Mel and Cindy. The holiday proved to be one of the happier times that Keith and Natalie had ever known.

Perhaps, Keith thought, it wasn't a bad thing to be remembering it tonight.

Pushed in behind the photo was a folded paper. It was one of the notes he had been thinking about, which Natalie pushed occasionally in his lunch pail. This was one from a few months ago which, for some reason, he had saved. Though knowing what was there, he took the paper out and walked to the window to read. It was a clipping from a news magazine, with some lines below in his wife's handwriting.

Natalie had all kinds of odd interests, some far-ranging which she encouraged Keith and the boys to share. This clipping was about continuing experiments, by U.S. geneticists. Human sperm, it reported, could now be fast frozen. The sperm was placed in a deep freeze for storage where it remained in good condition indefinitely. When thawed, it could be used for fertilization of women at any time—either soon or generations hence.

Natalie had written:

*The Ark could have been 50 percent smaller, if Noah
Had known the facts about frozen spermatazoa;
It appears you can have babies by the score
Merely by opening a refrigerator door.
I'm glad we had our ration
With love and passion.*

She had been trying then; still trying desperately to return their lives . . . the two of them; and as a family . . . to the way they had been before. *With love and passion.*

Mel had joined forces, too, attempting with Natalie, to induce his brother to fight free from the tide-race of anguish and depression which engulfed him totally.

Even then a part of Keith had wanted to respond. Summoning, from some deep consciousness, a spark of spirit, he had sought to match their strength by drawing on his own; to respond to proffered love with love himself. But the effort failed. It failed—as he had known it would—because there was no feeling or emotion left within himself. Neither warmth, nor love, nor even anger to be kindled. Only bleakness, remorse, and all-enveloping despair.

Natalie realized their failure now; he was sure of that. It was the reason, he suspected, that she had been crying, somewhere out of sight.

And Mel? Perhaps Mel, too, had given up. Though not entirely—Keith remembered what the tower chief had told him. "Your brother said he might drop around . . ."

It would be simpler if Mel didn't. Keith felt unequal to the effort, even though they had been as close as brothers could be all their lives. Mel's presence might be complicating.

Keith was too drained, too weary, for complications any more.

He wondered again if Natalie had put in a note with his meal tonight. He took out the contents of the lunch pail carefully, hoping that she had.

There were ham and watercress sandwiches, a container of cottage cheese, a pear, and wrapping paper. Nothing more.

Now that he knew there was none, he wished desperately there had been some message; any message, even the most trifling. Then he realized—it was his own fault; there had

been no time. Today, because of the preparations he needed to make, he had left home earlier than usual. Natalie, to whom he had given no advance warning, had been rushed. At one point, he had suggested not taking a lunch at all; he would get a meal, he said, at one of the airport cafeterias. But Natalie, who knew the cafeterias would be crowded and noisy, which Keith disliked, had said no, and gone ahead as quickly as she could. She had not asked why he wanted to leave early, though he knew she was curious. Keith was relieved that there had been no question. If there had been, he would have had to invent something, and he would not have wanted the last words between them to have been a lie.

As it was, there had been enough time. He had driven to airport business area and registered at the O'Hagan Inn ere, earlier in the day, he had made a reservation by telephone. He had planned everything carefully, using a plan rked out several weeks ago, though he had waited—giving nself time to think about it, and be sure—before putting : plan into effect. After checking into his room, he had t the Inn and arrived at the airport in time to go on duty.

The O'Hagan Inn was within a few minutes' drive of Lin-In International. In a few hours from now, when Keith's ty watch was ended, he could go there quickly. The room y was in his pocket. He took it out to check.

10

ie information—which the tower watch chief had relayed rlier to Mel Bakersfeld—about a meeting of Meadowood izenry, was entirely accurate.

The meeting, in the Sunday school hall of Meadowood rst Baptist Church—fifteen seconds, as a jet flies, from the d of runway two five—had been in session half-an-hour.

proceedings had started later than planned, since most of : six hundred adults who were present had had to battle ir way, in cars and on foot, through deep snow. But some- w they had come.

It was a mixed assemblage, such as might be found in any eragely prosperous dormitory community. Of the men, me were medium-level executives, others artisans, with a

sprinkling of local tradespeople. In numbers, men and women were approximately equal. Since it was Friday night, the beginning of a weekend, most were casually dressed, though exceptions were half a dozen visitors from outside the community and several press reporters.

The Sunday school hall was now uncomfortably crowded, stuffy and smoke-filled. All available chairs were occupied, and at least a hundred people were standing.

That so many had turned out at all on such a night, leaving warm homes to do so, spoke eloquently of their mettle and concern. They were also, at the moment, unanimously angry.

The anger—almost as tangible as the tobacco smoke—had two sources. First was the long-standing bitterness with the airport's by-product—the thunderous, ear-assaulting noise of jet propulsion which assailed the homes of Meadowood, day and night, shattering peace and privacy, both waking and sleeping. Second was the immediate frustration that, through a large part of the meeting so far, those assembled had been unable to hear one another.

Some difficulty in hearing had been anticipated. After all, it was what the meeting was about, and a portable p.a. system had been borrowed from the church. What had not been expected, however, was that tonight jet aircraft would be taking off immediately overhead, rendering both human ears and the p.a. system useless. The cause, which the meeting neither knew nor cared about, was that runway three zero was blocked by the mired Aéreo-Mexican 707, and other aircraft were being instructed to use runway two five instead. The latter runway pointed directly at Meadowood, like an arrow; whereas runway three zero, when usable, at least routed takeoffs slightly to one side.

In a momentary silence the chairman, red-faced, shouted, "Ladies and gentlemen, for years we have tried reasoning with the airport management and the airline companies. We have pointed to the violation of our homes. We have proved, with independent testimony, that normal living—under the barrage of noise we are forced to endure—is impossible. We have pleaded that our very sanity is in danger and that our wives, our children, and ourselves live on the edge of nervous breakdowns, which some among us have suffered already."

The chairman was a heavy-jowled, balding man named Floyd Zanetta, who was a printing firm manager and Meado-

munity affairs, and in the lapel of his sports jacket was a Kiwanis long-service badge.

Both the chairman and an impeccably dressed younger man were on a small raised platform at the front of the hall. The younger man, seated, was Elliott Freemantle, a lawyer. A black leather briefcase stood open at his side.

Floyd Zanetta slammed a hand on the lectern in front of him. "What do the airport and airlines do? I'll tell you what they do. They pretend; pretend to listen. And while they are pretending, they make promises and more promises which they have no intention of fulfilling. The airport management, the FAA, and the airlines are cheats and liars . . ."

The word "liars" was lost.

It was engulfed in a shattering, almost unbelievable crescendo of sound, a monstrous roar of power which seemed to seize the building and shake it. As if protectively, many in the hall covered their ears. A few glanced upward nervously. Others, their eyes transmitting anger, spoke heatedly to those beside them, though only a lip reader could have known what was said; no words were audible. A water pitcher near the chairman's lectern trembled. If Zanetta had not grasped it quickly, it would have fallen to the floor and shattered.

As swiftly as it had begun and built, the roar lessened and faded. Already miles away and several thousand feet above, Flight 58 of Pan American was climbing through storm and darkness, reaching for higher, clearer altitudes, swinging onto course for Frankfurt, Germany. Now, Continental Airlines 23, destination Denver, Colorado, was rolling on the farther end of runway two five, cleared for takeoff—over Meadowood. Other flights, already in line on an adjoining taxiway, were waiting their turn to follow.

It had been the same way all evening, even before the Meadowood meeting started. And after it started, business had had to be conducted in brief intervals between the overwhelming din of takeoffs.

Zanetta continued hastily, "I said they are cheats and liars. What is happening here and now is conclusive evidence. At the very least we are entitled to noise abatement procedures, but tonight even this . . ."

"Mr. Chairman," a woman's voice cut in from the body of the hall, "we've heard all this before. We all know it, and going over it again won't change anything." All eyes had turned to the woman, who was now standing. She had a

strong, intelligent face and shoulder-length brown hair which had fallen forward, so that she brushed it back impatiently. "What I want to know, and so do others, is what else can we do, and where do we go from here?"

There was an outburst of applause, and cheering.

Zanetta said irritably, "If you'll kindly let me finish . . ."

He never did.

Once again, the same encompassing roar dominated the Sunday school hall.

The timing, and the last remark, provided the only laughter, so far, of the evening. Even the chairman grinned ruefully as he raised his hands in a despairing gesture.

A man's voice called peevishly, "Get on with it!"

Zanetta nodded agreement. He continued speaking, picking his way—like a climber over rocks—between recurring peaks of sound from overhead. What the community of Meadowood must do, he declared, was to discard politeness and reasonable approaches to the airport authority and others. Instead, a purely legalistic attack must be the order from now on. The residents of Meadowood were citizens with legal rights, which were being infringed upon. Along with those legal rights went recourse to the courts; therefore, they must be prepared to fight in the courts, with toughness, even viciousness if necessary. As to what form a legalistic offensive should take, it so happened that a noted lawyer, Mr. Elliott Freemantle, whose offices were downtown in the Loop, had consented to be present at the meeting. Mr. Freemantle had made a study of laws affecting excessive noise, privacy and airspace, and, very soon, those who had braved the weather to attend would have the pleasure of hearing this distinguished gentleman. He would, in fact, present a proposal . . .

As the clichés rolled on, Elliott Freemantle fidgeted: He passed a hand lightly over his barber-styled, gray-streaked hair, fingering the smoothness of his chin and cheeks—he had shaved an hour before the meeting—and his keen sense of smell confirmed that the exclusive face lotion, which he always used after shaving and sunlamp sessions, still lingered. He recrossed his legs, observing that his two-hundred dollar alligator shoes still gleamed with mirror clearness, and was careful not to spoil the crease in the trousers of his tailored Blue Spruce pebble-weave suit. Elliott Freemantle

unlike their doctors—to look prosperous. Prosperity in a lawyer conveyed an aura of success at the bar, success which those about to engage in litigation wanted for themselves.

Elliott Freemantle hoped that most of those in the hall would shortly become litigants, and that he would represent them. Meanwhile, he wished the old cluck of a chairman, Zanetta, would get the hell off his feet so that he, Freemantle, could take over. There was no surer way to lose the confidence of an audience, or a jury, than by letting them think faster than yourself, so that they became aware of what you were going to say before you said it. Freemantle's finely honed intuition told him this was what was happening now. It meant that when his own turn came, he would have to work that much harder to establish his competence and superior intellect.

Some among his legal colleagues might have questioned whether Elliott Freemantle's intellect was, in fact, superior. They might even have objected to the chairman's description of him as a gentleman.

Fellow lawyers sometimes regarded Freemantle as an exhibitionist who commanded high fees mainly through a showman's instinct for attracting attention. It was conceded, though, that he had an enviable knack for latching early onto causes which later proved spectacular and profitable.

For Elliott Freemantle, the Meadowood situation seemed custom made.

He had read about the community's problem and promptly arranged, through contacts, to have his name suggested to several homeowners as the one lawyer who could most likely help them. As a result, a homeowners committee eventually approached him, and the fact that they did so, rather than the other way around, gave him a psychological advantage he had planned from the beginning. Meanwhile, he had made a superficial study of the law, and recent court decisions, affecting noise and privacy—a subject entirely new to him—and when the committee arrived, he addressed them with the assurance of a lifetime expert.

Later, he had made the proposition which resulted in this meeting tonight, and his own attendance.

Thank God! It looked as if Zanetta, the chairman, were finally through with his windy introduction. Banal to the last, he was intoning, “. . . and so it is my privilege and pleasure to present . . .”

Scarcely waiting for his name to be spoken, Elliott Freemantle bounded to his feet. He began speaking before Zanetta's buttocks had made contact with his chair. As usual, he dispensed with all preliminaries.

"If you are expecting sympathy from me, you can leave right now, because there won't be any. You won't get it at this session, or others we may have later. I am not a purveyor of crying towels, so if you need them, I suggest you get your own, or supply each other. My business is law. Law, and nothing else."

He had deliberately made his voice harsh, and he knew he had jolted them, as he intended to.

He had also seen the newspaper reporters look up and pay attention. There were three of them at the press table near the front of the hall—two young men from the big city dailies and an elderly woman from a local weekly. All were important to his plans, and he had taken the trouble to find out their names and speak to them briefly before the meeting started. Now, their pencils were racing. Good! Cooperation with the press always ranked high in any project of Elliott Freemantle's, and he knew from experience that the best way to achieve it was by providing a lively story with a fresh angle. Usually he succeeded. Newspaper people appreciated that—a lot more than free drinks or food—and the livelier and more colorful the story, the more friendly their reportage was inclined to be.

He returned his attention to the audience.

Only a shade less aggressively, he continued, "If we decide, between us, that I am to represent you, it will be necessary for me to ask you questions about the effect of airport noise on your homes, your families, your own physical and mental health. But do not imagine I shall be asking the questions because I care personally about these things, or you as individuals. Frankly, I don't. You may as well know that I am an extremely selfish man. If I ask these questions, it will be to discover to what extent wrong has been done you under the law. I am already convinced that some wrong has been done—perhaps considerable wrong—and, in that event, you are entitled to legal redress. But you may as well know that whatever I learn, and however deeply I become involved, I am not given to losing sleep about the welfare of my clients when I'm away from my office or the courts. But . . ." Freemantle paused dramatically, and stabbed a finger forward to

underscore his words. "But, in my office and in the courts, as clients, you would have the utmost of my attention and ability; *on questions of law*. And on those occasions, if we work together, I promise you will be glad I am on your side and not against you."

Now he had the attention of everyone in the hall. Some, both men and women, were sitting forward in their chairs, striving not to miss any words as he paused—though for the minimum time—as aircraft continued overhead. A few faces had become hostile as he spoke, but not many. It was time, though, to relax the pressure a little. He gave a swift, short smile, then went on seriously.

"I inform you of these things so that we understand each other. Some people tell me that I am a mean, unpleasant man. Maybe they are right, though personally if ever I want a lawyer for myself I'll make sure of choosing someone who is mean and unpleasant, also tough—on my behalf." There were a few approving nods and smiles.

"Of course, if you want a nicer guy who'll hand you more sympathy, though maybe a bit less law"—Elliott Freemantle shrugged—"that's your privilege."

He had been watching the audience closely and saw a responsible-looking man, in heavy rimmed glasses, lean toward a woman and whisper. From their expressions, Freemantle guessed the man was saying, "This is more like it!—what we wanted to hear." The woman, probably the whisperer's wife, nodded agreement. Around the hall, other faces conveyed the same impression.

As usual on occasions like this, Elliott Freemantle had shrewdly judged the temper of the meeting and calculated his own approach. He sensed early that these people were weary of platitudes and sympathy—well-meaning but ineffective. His own words, blunt and brutal, were like a cold, refreshing douche. Now, before minds could relax and attention wander, he must take a new tack. The moment for specifics had arrived—tonight, for this group, a discourse on the law of noise. The trick to holding audience attention, at which Elliott Freemantle excelled, was to stay half a mental pace ahead; that much and no more, so that those listening could follow what was being said, but must remain sufficiently alert to do so.

"Pay attention," he commanded, "because I'm going to talk about your particular problem."

The law of noise, he declared, was increasingly under study by the nation's courts. Old concepts were changing. New court decisions were establishing that excessive noise could be an invasion of privacy as well as trespass on property rights. Moreover, courts were in a mood to grant injunctions and financial recompense where intrusion—including aircraft intrusion—could be proven.

Elliott Freemantle paused while another takeoff thundered overhead, then gestured upward. "I believe you will have no difficulty in proving it here."

At the press table, all three reporters made a note.

The United States Supreme Court, he went on, had already set a precedent. In *U.S. v. Causby* the court ruled that a Greensboro, North Carolina, chicken farmer was entitled to compensation because of "invasion" by military planes flying low above his house. In handing down the *Causby* decision, Mr. Justice William O. Douglas had stated, "... if the landowner is to have full enjoyment of the land, he must have exclusive control of the immediate reaches of the enveloping atmosphere." In another case reviewed by the Supreme Court, *Griggs v. County of Allegheny*, a similar principle was upheld. In state courts of Oregon and Washington, in *Thornburg v. Port of Portland* and *Martin v. Port of Seattle*, damages for excessive aircraft noise had been awarded, even though airspace directly above the plaintiffs had not been violated. Other communities had begun, or were contemplating, similar legal action, and some were employing sound trucks and movie cameras as aids to proving their case. The trucks took decibel readings of noise; the cameras recorded aircraft altitudes. The noise frequently proved greater, the altitudes lower, than airlines and airport management admitted. In Los Angeles, a homeowner had filed suit against L. A. International Airport, asserting that the airport, by permitting landings on a newly extended runway close to his home, had taken an easement on his property without due process of law. The homeowner was claiming ten thousand dollars which he believed to be equivalent to the decrease in value of his home. Elsewhere, more and more similar cases were being argued in the courts.

The recital was succinct and impressive. Mention of a specific sum—ten thousand dollars—evoked immediate interest, as Elliott Freemantle intended that it should. The entire presentation was a masterpiece of legal strategy and a product of

years of study. Only Freemantle himself knew that his "facts" were the result, not of poring over law reports, but of two hours, the previous afternoon, spent studying newsclippings in a downtown newspaper morgue.

There were also several facts which he had failed to mention. The chicken farmer ruling of the Supreme Court was made more than twenty years earlier, and total damages awarded were a trifling three hundred and seventy-five dollars—the actual value of some dead chickens. The Los Angeles suit was merely a claim which had not yet come to trial and might never do so. A more significant case, *Batten v. U.S.*, on which the Supreme Court had ruled as recently as 1963, Elliott Freemantle knew about but conveniently ignored. In *Batten*, the court accepted that only an actual "physical invasion" could create liability; noise alone did not do so. Since, at Meadowood, there had been no such invasion, the *Batten* precedent meant that if a legal case was launched, it might well be lost before it was begun.

But lawyer Freemantle had no wish for this to be known, at least not yet; nor was he overly concerned whether a case, if brought to court, might eventually be won or lost. What he wanted was this Meadowood homeowners group as clients—at a whopping fee.

On the subject of fee, he had already counted the house and done some mental arithmetic. The result delighted him.

Of six hundred people in the hall, he estimated that five hundred, probably more, were Meadowood property owners. Allowing for the presence of husbands and wives together, it meant there was a minimum of two hundred and fifty prospective clients. If each of those two hundred and fifty could be persuaded to sign a one hundred dollar retainer agreement—which Elliott Freemantle hoped they would before the evening was over—a total fee in excess of twenty-five thousand dollars seemed decidedly within reach.

On other occasions he had managed precisely the same thing. It was remarkable what you could accomplish with audacity, particularly when people were white hot in pursuing their own interests. An ample supply of printed retainer forms was in his bag. *This memorandum of agreement between . . . hereinafter known as plaintiff/s and Freemantle and Sye, attorneys at law . . . who will undertake plaintiff/s legal representation in promotion of a claim for damages sustained due to aircraft use of the Lincoln*

International Airport facility . . . Plaintiff/s agrees to pay the said Freemantle and Sye one hundred dollars, in four installments of twenty-five dollars, the first installment now due and payable, the balance quarterly on demand . . . Further, if the suit is successful Freemantle and Sye will receive ten percent of the gross amount of any damages awarded . . .

The ten percent was a long shot because it was highly unlikely that there would ever be any damages to collect. Just the same, strange things sometimes happened in law, and Elliott Freemantle believed in covering all bases.

"I have informed you of the legal background," he asserted. "Now I intend to give you some advice." He flashed one of his rare, quick smiles. "This advice will be a free sample, but—like toothpaste—any subsequent tubes will have to be paid for."

There was a responsive laugh which he cut off brusquely with a gesture. "My advice is that there is little time for anything else but action. Action now."

The remark produced handclapping and more nods of approval.

There was a tendency, he continued, to regard legal proceedings as automatically slow and tedious. Often that was true, but on occasions, if determination and legal skill were used, the law could be harried along. In the present instance, legal action should be begun at once, before airlines and airport, by perpetuation of noise over a period of years, could claim custom and usage. As if to underline the point, still another aircraft thundered overhead. Before its sound could die, Elliott Freemantle shouted, "So I repeat—my advice to you is wait no longer! You should act tonight. Now!"

Near the front of the audience, a youngish man in an alpaca cardigan and hopsack slacks sprang to his feet. "By God!—tell us how we start."

"You start—if you want to—by retaining me as your legal counsel."

There was an instant chorus of several hundred voices. "Yes, we want to."

The chairman, Floyd Zanetta, was now on his feet again, waiting for the shouting to subside. He appeared pleased. Two of the reporters had craned around and were observing the obvious enthusiasm throughout the hall. The third reporter—the elderly woman from the local up at the platform with a friendly smile.

It had worked, as Elliott Freemantle had known it would. The rest, he realized, was merely routine. Within the next half hour a good many of the retainer blanks in his bag would be signed, while others would be taken home, talked over, and most likely mailed tomorrow. These people were not afraid of signing papers, or of legal procedures; they had become accustomed to both in purchasing their homes. Nor would a hundred dollars seem an excessive sum; a few might even be surprised that the figure was that low. Only a handful would bother doing the mental arithmetic which Elliot Freemantle had done himself, and even if they objected to the size of the total amount, he could argue that the fee was justified by responsibility for the large numbers involved.

Besides, he would give them value for their money—a good show, with fireworks, in court and elsewhere. He glanced at his watch; better get on. Now that his own involvement was assured, he wanted to cement the relationship by staging the first act of a drama. Like everything else so far, it was something he had already planned and it would gain attention—much more than this meeting—in tomorrow's newspapers. It would also confirm to these people that he meant what he said about not wasting any time.

The actors in the drama would be the residents of Meadowood, here assembled, and he hoped that everyone present was prepared to leave this hall and to stay out late.

The scene would be the airport.

The time: tonight.

11

At approximately the same time that Elliott Freemantle was savoring success, an embittered, thwarted, former building contractor named D. O. Guerrero was surrendering to failure.

Guerrero was fifteen miles or so from the airport, in a locked room of a shabby walk-up apartment on the city's South Side. The apartment was over a noisome, greasy-spoon lunch counter on 51st Street, not far from the stockyards.

D. O. Guerrero was a gaunt, spindly man, slightly stoop-shouldered, with a sallow face and protruding, narrow jaw. He had deep-set eyes, pale thin lips, and a slight sandy mus-

tache. His neck was scrawny, with a prominent Adam's apple. His hairline was receding. He had nervous hands, and his fingers were seldom still. He smoked constantly, usually lighting a fresh cigarette from the stub of the last. At the moment he needed a shave and a clean shirt, and was perspiring, even though the room in which he had locked himself was cold. His age was fifty; he looked several years older.

Guerrero was married, and had been for eighteen years. By some standards, the marriage was good, if unspectacular. D.O. (through most of his life he had been known by his initials) and Inez Guerrero accepted each other equably, and the idea of coveting some other partner seemed not to occur to them. D. O. Guerrero, in any case, had never been greatly interested in women; business, and financial maneuvering, occupied his thoughts far more. But in the past year, a mental gulf had opened between the Guerreros which Inez, though she tried, was unable to bridge. It was one result of a series of business disasters which reduced them from comparative affluence to near poverty, and eventually forced a succession of moves—first from their comfortable and spacious, if heavily mortgaged, suburban home to other quarters less pretentious, and later still to this seamy, drafty, cockroach-infested, two-room apartment.

Even though Inez Guerrero did not enjoy their situation, she might have made the best of it if her husband had not become increasingly moody, savagely bad tempered, and at times impossible to talk with. A few weeks ago, in a rage, he had struck Inez, bruising her face badly, and though she would have forgiven him, he would neither apologize nor discuss the incident later. She feared more violence and, soon after, sent their two teen-age children—a boy and a girl—to stay with her married sister in Cleveland. Inez herself stayed on, taking a job as a coffee-house waitress, and although the work was hard and the pay small, it at least provided money for food. Her husband seemed scarcely to notice the children's absence, or her own; his mood recently had been a deep and self-contained dejection.

Inez was now at her job. D. O. Guerrero was in the apartment alone. He need not have locked the door of the small bedroom where he was occupied, but had done so as an added guarantee of privacy, even though he would not be there for long.

Like others this night, D. O. Guerrero w

for the airport. He held a confirmed reservation, plus a validated ticket—for tonight—on Trans America Flight Two to Rome. At this moment, the ticket was in a pocket of his topcoat, also in the locked room, slung over a rickety wooden chair.

Inez Guerrero had no knowledge of the ticket to Rome, nor did she have the slightest inkling of her husband's motive in obtaining it.

The Trans America ticket was for a round trip excursion which normally cost four hundred and seventy-four dollars. However, by lying, D. O. Guerrero had obtained credit. He had paid forty-seven dollars down, acquired by pawning his wife's last possession of any value—her mother's ring (Inez had not yet missed it)—and promised to remit the balance, plus interest, in monthly installments over the next two years.

It was highly unlikely that the promise would ever be fulfilled.

No self-respecting finance company or bank would have loaned D. O. Guerrero the price of a bus ticket to Peoria, let alone an airline fare to Rome. They would have investigated his background thoroughly, and discovered that he had a long history of insolvency, a parcel of long-standing personal debts, and that his homebuilding company, Guerrero Contracting Inc., had been placed in bankruptcy a year earlier.

An even closer check into Guerrero's tangled finances might have disclosed that during the past eight months—using his wife's name—he had attempted to raise capital for a speculative land deal, but failed to do so. In course of this failure he had incurred even more debts. Now, because of certain fraudulent statements, as well as being an undischarged bankrupt, exposure, which seemed imminent, would involve criminal prosecution and almost certainly a prison term. Slightly less serious, but just as immediate, was the fact that the rent of this apartment, wretched as it was, was three weeks overdue, and the landlord had threatened eviction tomorrow. If evicted, they would have nowhere else to go.

D. O. Guerrero was desperate. His financial rating was minus zero.

Airlines, though, were notably easygoing about extending credit; also, if a debt went sour they were usually less tough in collection procedures than other agencies. This was calculated policy. It was based on the fact that fare-paying air travelers, over the years, had proven themselves an unusually

honest cross-section of society, and bad debt losses of most airlines were remarkably low. Deadbeats like D. O. Guerrero troubled them rarely; therefore they were not geared—because it was not worth while—to defeat the kind of subterfuge he had used.

He avoided, by two simple means, more than a cursory credit investigation. First, he produced an "employer's reference" which he had typed himself on the letterhead of a defunct company he once operated (not the bankrupt one), the company's address being his own post office box. Second, in typing the letter he deliberately misspelled his surname, changing the initial from "G" to "B," so that a routine consumer credit check of "Buerrero" would produce no information, instead of the harmful data recorded under his correct name. For further identification he used his Social Security card and driver's license, on both of which he carefully changed the same initial beforehand, and had since changed it back again. Another point he remembered was to make sure that his signature on the time payment contract was indecipherable, so it was not clear whether he had signed "G" or "B."

The misspelling was perpetuated by the clerk who yesterday made out his airline ticket in the name of "D. O. Buerrero," and D. O. Guerrero had weighed this carefully in light of his immediate plans. He decided not to worry. If any query was raised afterward, the error of a single letter, both on the "employer's reference" and the ticket, would appear to be a genuine mistake. There was nothing to prove he had arranged it deliberately. In any case, when checking in at the airport later tonight, he intended to have the spelling corrected—on the Trans America flight manifest as well as on his ticket. It was important, once he was aboard, to be sure there was no confusion about his correct identity. That was part of his plan, too.

Another part of D. O. Guerrero's plan was to destroy Flight Two by blowing it up. He would destroy himself along with it, a factor which did not deter him since his life, he reasoned, was no longer of value to himself or others.

But his death could be of value, and he intended to make sure it was.

Before departure of the Trans America flight, he would take out flight insurance for seventy-five thousand dollars, naming his wife and child as beneficiaries.

that he had done little for them until now, but his final would be a single transcendent gesture on their behalf. He believed that what he was doing was a deed of love and sacrifice.

In his warped, perverted mind—driven by desperation—he had given no thought to other passengers who would aboard Flight Two, nor to the aircraft's crew, all of whose deaths would accompany his own. With a psychopath's total lack of conscience he had considered others only to the extent that they might circumvent his scheme.

He believed he had anticipated all contingencies.

The business about his ticket would not matter once the aircraft was en route. No one could prove he had not intended to pay the installments he contracted for; and even the fake "employer's reference" was exposed—as it probably would be—it demonstrated nothing except that he had obtained credit under false pretenses. That, in itself, would have no bearing on a subsequent insurance claim.

Another thing was that he deliberately bought a round-trip ticket to create the appearance of not only intending to complete the outward flight, but also to return. As to choosing the Rome flight, he had a second cousin in Italy whom he had never seen, but occasionally talked of visiting—a fact which Inez knew. So at least there would seem an element of logic to his choice.

D. O. Guerrero had had his plan in mind for several months while his fortunes were worsening. During that time he studied carefully the histories of air disasters where airliners were destroyed by individuals seeking to profit from flight insurance. The number of instances was surprisingly large. In all cases on record the motive had been exposed by post-crash investigation and, where conspirators remained alive, they were charged with murder. The flight insurance policies of those involved had been invalidated.

There was no means of knowing, of course, how many other disasters, where causes remained unknown, had been the result of sabotage. The key factor was the presence or absence of wreckage. Wherever wreckage was recovered, trained investigators pieced it together in an attempt to learn its secrets. They usually succeeded. If there was an explosion in mid-air, its traces remained, and the nature of the explosion could be determined. Therefore, D. O. Guerrero reasoned, his own plan must preclude the recovery of wreckage.

This was the reason he had selected Trans America's non-stop flight to Rome.

A large portion of the journey of Flight Two—*The Golden Argosy*—was above ocean, where wreckage from a disintegrated airplane would never be found.

Using one of the airline's own passenger brochures which conveniently showed air routes, aircraft speeds, and even had a feature called *Chart Your Own Position*, Guerrero calculated that after four hours' flying—allowing for average winds—Flight Two would be over mid-Atlantic. He intended to check the calculation and amend it, if necessary, as the journey progressed. He would do so, first by noting the exact time of takeoff, then by listening carefully to the announcements which captains always made over cabin p.a. systems about the aircraft's progress. With the information it would be a simple matter to decide if the flight was behind schedule, or ahead, and by how much. Finally, at approximately a point he had already decided on—eight hundred miles east of Newfoundland—he would trigger an explosion. It would end the aircraft, or what remained of it, plummeting toward the sea.

No wreckage could ever be found.

The debris of Flight Two would remain forever, hidden and secret, on the Atlantic Ocean floor. There would be no examination, no later exposure of the cause of the aircraft's loss. Those left might wonder, question, speculate; they might even guess the truth, but they could never *know*.

Flight insurance claims—in the absence of any evidence of sabotage—would be settled in full.

The single element on which everything else hinged was the explosion. Obviously it must be adequate to destroy the airplane, but—equally important—it must occur at the right time. For the second reason D. O. Guerrero had decided to carry the explosive device aboard and set it off himself. Now, within the locked bedroom, he was putting the device together, and despite his familiarity—as a building contractor—with explosives, was still sweating, as he had been since he started a quarter of an hour ago.

There were five main components—three cartridges of dynamite, a tiny blasting cap with wires attached and a single cell transistor radio battery. The dynamite (Du Pont Red Cross Extra—small but exceedingly powerful) containing forty percent nitroglycerin; each w.

a quarter in diameter and eight inches long. They were taped together with black electrician's tape and, to conceal their purpose, were in a Ry-Krisp box, left open at one end.

Guerrero had also laid out several other items, carefully, on the ragged coverlet of the bed where he was working. These were a wooden clothespin, two thumbtacks, a square inch of clear plastic, and a short length of string. Total value of the equipment which would destroy a six and a half million dollar airplane was less than five dollars. All of it, including the dynamite—a "leftover" from D. O. Guerrero's days as a contractor—had been bought in hardware stores.

Also on the bed was a small, flat attaché case of the type in which businessmen carried their papers and books when traveling by air. It was in this that Guerrero was now installing the explosive apparatus. Later, he would carry the case with him on the flight.

It was all incredibly simple. It was so simple, in fact, Guerrero thought to himself, that most people, lacking a knowledge of explosives, would never believe that it would work. And yet it would—with shattering, devastating deadliness.

He taped the Ry-Krisp box containing the dynamite securely in place inside the attaché case. Close to it he fastened the wooden clothespin and the battery. The battery would fire the charge. The clothespin was the switch which, at the proper time, would release the current from the battery.

His hands were trembling. He could feel sweat, in rivulets, inside his shirt. With the blasting cap in place, one mistake, one slip, would blow himself, this room, and most of the building, apart, here and now.

He held his breath as he connected a second wire from the blasting cap and dynamite to one side of the clothespin.

He waited, aware of his heart pounding, using a handkerchief to wipe moisture from his hands. His nerves, his senses, were on edge. Beneath him, as he sat on the bed, he could feel the thin, lumpy mattress. The decrepit iron bedstead screeched a protest as he moved.

He resumed working. With exquisite caution, he connected another wire. Now, only the square inch of clear plastic was preventing the passage of an electric current and thereby an explosion.

The plastic, less than a sixteenth of an inch thick, had a small hole near its outer edge. D. O. Guerrero took the last

item left on the bed—the string—and passed one end through the hole in the plastic, then tied it securely, being cautious not to move the plastic. The other end of the string he pushed through an inconspicuous hole, already drilled, which went through to the outside of the attaché case, emerging under the carrying handle. Leaving the string fairly loose inside the case, on the outside he tied a second knot, large enough to prevent the string from slipping back. Finally—also on the outside—he made a finger-size loop, like a miniature hangman's noose, and cut off the surplus string.

And that was it.

A finger through the loop, a tug on the string! Electric current would flow, and the explosion would be instant, devastating, final, for whomever or whatever was nearby.

Now that it was done, Guerrero relaxed and lit a cigarette. He smiled sardonically as he reflected again on how much more complicated the public—including writers of detective fiction—imagined the e. In stories he had read there were fuses, which ticked or ms, clocks, which could be circumvented if im no compli- cations were required- components he had just put together the detona- tion of his kind of bor tion of his kind of bor tion of his kind of bor tion of his kind of bor —once the string was p —once the string was p —once the string was p —once the string was p

shabby living room, taking the attaché case with him, holding it gingerly.

One final thing to do! A note for Inez. He found a scrap of paper and a pencil and, after thinking for several seconds, wrote:

*I won't be home for a few days. I'm going away.
I expect to have some good news soon which will
surprise you.*

He signed it *D.O.*

For a moment he hesitated, softening. It wasn't much of a note to mark the end of eighteen years of marriage. Then he decided it would have to do; it would be a mistake to say too much. Afterward, even without wreckage from Flight Two, investigators would put the passenger list under a microscope. The note, as well as all other papers he had left, would be examined minutely.

He put the note on a table where Inez would be sure to see it.

As he went downstairs D. O. Guerrero could hear voices, and a jukebox playing, from the greasy-spoon lunch counter. He turned up the collar of his topcoat, with the other hand holding the attaché case tightly. Under the carrying handle of the case, the loop of string like a hangman's noose was close to his curled fingers.

Outside, as he left the South Side building and headed for the subway, it was still snowing.

Once more, Joe Patroni returned to the warmth of his car and telephoned the airport. The TWA maintenance chief reported that the road between himself and the airport was still blocked by the traffic accident which had delayed him, but the chances of getting through soon looked good. Was the Aéreo-Mexican 707, he inquired, still stuck in mud out on the airfield? Yes, he was informed, it was; furthermore, every few minutes, everyone concerned was calling TWA to ask where he was, and how much longer he would be, because his help was needed urgently.

Without waiting to warm himself fully, Patroni left the car and hurried back down the highway, through the still falling snow and deep slush underfoot, to where the accident had occurred.

At the moment, the scene around the wrecked tractor-trailer transport looked like a staged disaster for a wide screen movie. The mammoth vehicle still lay on its side, blocking all four traffic lanes. By now it was completely snow covered and, with none of its wheels touching ground, seemed like a dead, rolled-over dinosaur. Floodlights and flares, aided by the whiteness of the snow, made the setting seem like day. The floodlights were on the three tow trucks which Patroni had urged sending for, and all had now arrived. The brilliant red flares had been planted by state police, of whom several more had appeared, and it seemed that when a state trooper lacked something to do, he lit another flare. As a result, the display of pyrotechnics was worthy of the Fourth of July.

The arrival of a TV camera crew, a few minutes earlier,

had heightened the stage effect. The self-important crew had come with blaring horn and illegal flashing beacon, driving down a shoulder of the road in a maroon station wagon blazoned WSH.T. Typically, the four young men who comprised the TV crew had taken over as if the entire event had been arranged for their convenience, and all further developments could now await their pleasure. Several state troopers, having ignored the illegal beacon on the station wagon, were engaged in waving the tow trucks from their present positions into new ones, as the TV men directed.

Before he left to make his telephone call, Joe Patroni had carefully coaxed the tow trucks into locations which would give them the best leverage, together, to move the disabled tractor-trailer. As he left, the truck drivers and helpers were connecting heavy chains which he knew would take several more minutes to secure. The state police had been glad of his aid, and a burly police lieutenant, by that time in charge at the scene, had told the tow truck drivers to take their instructions from Patroni. But now, incredibly, the chains were removed, except for one which a grinning tow truck operator was handling as photofloods and a portable TV camera focused on him.

Behind the camera and lights a crowd of people, even larger than before, had assembled from other blocked vehicles. Most were watching the TV filming interestedly, their earlier impatience and the cold bleak misery of the night apparently forgotten for the moment.

A sudden gust of wind slapped icy wet snow into Joe Patroni's face. Too late, his hand went to the neck of his parka. He felt some of the snow slide in, penetrate his shirt, and soak him miserably. Ignoring the discomfort, he strode toward the state police lieutenant and demanded, "Who in hell changed the trucks? The way they're lined now, you couldn't move a peck of coondirt. All they'll do is pull each other."

"I know, mister." The lieutenant, tall, broad-shouldered, and towering above the short, stocky figure of Patroni, appeared fleetingly embarrassed. "But the TV guys wanted a better shot. They're from a local station, and it's for the news tonight—all about the storm. Excuse me."

One of the television men—himself huddled into a heavy coat—was beckoning the lieutenant into the filming. The lieutenant, head up, and ignoring the falling snow, walked

with brisk authority toward the tow truck which was the center of the film shot. Two state troopers followed. The lieutenant, being careful to keep his face toward the camera, began giving instructions, with gestures, to the tow truck operator, instructions which were largely meaningless, but on screen would look impressive.

The maintenance chief, remembering his need to get to the airport speedily, felt his anger rise. He braced himself to race out, grab the TV camera and lights, and smash them all. He could do it, too; instinctively his muscles tightened, his breathing quickened. Then, with an effort, he controlled himself.

A trait of character of Joe Patroni's was a white-hot, violent temper; fortunately the violent part was not easily set off, but once it was, all reason and logic deserted him. The exercise of control over his temper was something he had tried to learn through his years of manhood. He had not always succeeded, though nowadays a single memory helped.

On one occasion he had failed to have control. The result, forever after, haunted him.

In the Army Air Forces of World War II, Joe Patroni had been a redoubtable amateur boxer. He fought as a middleweight and, at one point, came within sight of the Air Forces championship, within his division, of the European Theater.

In a bout staged in England shortly before the Normandy invasion, he had been matched against a crew chief named Terry O'Hale, a rough, tough Bostonian with a reputation for meanness in the ring, as well as out of it. Joe Patroni, then a young Pfc. aviation mechanic, knew O'Hale and disliked him. The dislike would not have mattered if O'Hale, as a calculated part of his ring technique, had not whispered constantly, "*You greasy dago wop . . . Whyn't you fighting for the other side, you mother lovin' Eytie? . . . You cheer when they shoot our ships down, dago boy?*" and other pleasantries. Patroni had seen the gambit for what it was—an attempt to get him rattled—and ignored it until O'Hale landed two low blows near the groin in swift succession, which the referee, circling behind, did not observe.

The combination of insults, foul blows, and excruciating pain, produced the anger which Patroni's opponent had counted on. What he did not count on was that Joe Patroni would deliver an onslaught so swift, savage, and utterly with-

ut mercy that O'Hale went down before it and, after being counted out, was pronounced dead.

Patroni was exonerated. Although the referee had not observed the low blows, others at ringside had. Even without them, Patroni had done no more than was expected—fought to the limit of his skill and strength. Only he was aware that for the space of seconds he had been berserk, insane. Alone and later, he faced the realization that even if he had known O'Hale was dying, he could not have stopped himself.

In the end, he avoided the cliché of abandoning fighting, or hanging up his gloves for good," as the usual fiction sequence went. He had gone on fighting, employing in the ring the whole of his physical resource, not holding back, yet testing his own control to avoid crossing the hairline between reason and berserk savagery. He succeeded, and knew that he had, because there were tests of anger where reason struggled with the wild animal inside him—and reason won. Then, and only then, did Joe Patroni quit fighting for the remainder of his life.

But control of anger did not mean dismissing it entirely. As the police lieutenant returned from camera range, Patroni confronted him heatedly. "You just blocked this road an extra twenty minutes. It took ten minutes to locate those trucks where they should be; it'll take another ten to get them back."

As he spoke, there was the sound of a jet aircraft overhead—a reminder of the reason for Joe Patroni's haste.

"Now listen, mister." The lieutenant's face suffused a deeper red than it already was from cold and wind. "Get brought your head that I'm in charge here. We're glad to have help, including yours. But I'm the one who's making decisions."

"Then make one now!"

"I'll make what I'm . . ."

"No!—you listen to *me*." Joe Patroni stood glaring, uninhibited by the policeman's bulk above him. Something of the maintenance chief's contained anger, and a hint of authority, made the lieutenant hesitate.

"There's an emergency at the airport. I already explained it; and why I'm needed there." Patroni stabbed his glowing cigar through the air for emphasis. "Maybe other people have reasons for hightailing it out of here too, but mine's enough for now. There's a phone in my car. I can call my top brass,

who'll call your brass, and before you know it, somebody'll be on that radio of yours asking why you're polishing your TV image instead of doing the job you're here for. So make a decision, the way you said! Do I call in, or do we move?"

The lieutenant glared wrathfully back at Joe Patroni. Briefly, the policeman seemed ready to vent his own anger, then decided otherwise. He swung his big body toward the TV crew. "Get all that crap out of here! You guys have had long enough."

One of the television men called over his shoulder, "We'll just be a few minutes more, chief."

In two strides the lieutenant was beside him. "You heard me! Right now!"

The policeman leaned down, his face still fierce from the encounter with Patroni, and the TV man visibly jumped. "Okay, okay." He motioned hastily to the others and the lights on the portable camera went out.

"Let's have those two trucks back the way they were!" The lieutenant began firing orders at the state troopers, who moved quickly to execute them. He returned to Joe Patroni and gestured to the overturned transport; it was clear that he had decided Patroni was more use as an ally than an antagonist. "Mister, you still think we have to drag this rig? You sure we can't get it upright?"

"Only if you want to block this road till daylight. You'd have to unload the trailer first, and if you do . . ."

"I know, I know! Forget it! We'll pull and shove now, and worry about damage later." The lieutenant gestured to the waiting line of traffic. "If you want to get moving right after, you'd better hustle your car out of line and move up front. You want an escort to the airport?"

Patroni nodded appreciatively. "Thanks."

Ten minutes later the last pindle tow hook snapped into place. Heavy chains from one tow truck were secured around the axles of the disabled transport tractor; a stout wire cable connected the chains to the tow truck winch. A second tow truck was connected to the toppled trailer. The third tow truck was behind the trailer, ready to push.

The driver from the big transport unit, which, despite its overturning, was only partially damaged, groaned as he watched what was happening. "My bosses ain't gonna like this! That's a near-new rig. You're gonna tear it apart."

"If we do," a young state trooper told him, "we'll be finishing what you started."

"Wadda you care? Ain't nothing to you I just lost a good job," the driver grumbled back. "Maybe I should try for a soft touch next time—like bein' a lousy cop."

The trooper grinned. "Why not? You're already a lousy driver."

"You figure we're ready?" the lieutenant asked Patroni.

Joe Patroni nodded. He was crouching, observing the tautness of chains and cables. He cautioned, "Take it slow and easy. Get the cab section sliding first."

The first tow truck began pulling with its winch; its wheels skidded on snow and the driver accelerated forward, keeping the tow chain straining. The overturned transport's front portion creaked, slid a foot or two with a protesting scream of metal, then stopped.

Patroni motioned with his hand. "Keep it moving! And get the trailer started!"

The chains and cable between the trailer axles and the second tow truck tightened. The third tow truck pushed against the trailer roof. The wheels of all three tow trucks skidded as they fought for purchase on the wet, packed snow. For another two feet the tractor and trailer, still coupled together, as they had been when they rolled over, moved sideways across the highway to an accompanying ragged cheer from the crowd of onlookers. The TV camera was functioning again, its lights adding brightness to the scene.

A wide, deep gash in the road showed where the big transport had been. The tractor cab and the body of the loaded trailer were taking punishment, the trailer roof beginning to angle as one side of the trailer dragged against the road. The price to be paid—no doubt by insurers—for reopening the highway quickly would be a steep one.

Around the road blockage, two snowplows—one on either side like skirmishers—were attempting to clear as much as they could of the snow which had piled since the accident occurred. Everything and everyone, by this time, was snow covered, including Patroni, the lieutenant, state troopers, and all others in the open.

The truck motors roared again. Smoke rose from tires, spinning on wet, packed snow. Slowly, ponderously, the overturned vehicle shifted a few inches, a few feet, then slid clear across to the far side of the road. Within seconds, in-

stead of blocking four traffic lanes, it obstructed only one. It would be a simple matter now for the three tow trucks to nudge the tractor-trailer clear of the highway onto the shoulder beyond.

State troopers were already moving flares, preparatory to untangling the monumental traffic jam which would probably occupy them for several hours to come. The sound, once again, of a jet aircraft overhead was a reminder to Joe Patroni that his principle business this night still lay elsewhere.

The state police lieutenant took off his cap and shook the snow from it. He nodded to Patroni. "I guess it's your turn, mister."

A patrol car, parked on a shoulder, was edging onto the highway. The lieutenant pointed to it. "Keep closed up behind that car. I've told them you'll be following, and they've orders to get you to the airport fast."

Joe Patroni nodded. As he climbed into his Buick Wildcat, the lieutenant called after him, "And mister . . . Thanks!"

2

Captain Vernon Demerest stood back from the cupboard door he had opened, and emitted a long, low whistle.

He was still in the kitchen of Gwen Meighen's apartment on Stewardess Row. Gwen had not yet appeared after her shower and, while waiting, he had made tea as she suggested. It was while looking for cups and saucers that he had opened the cupboard door.

In front of him were four tightly packed shelves of bottles. All were miniature bottles of liquor—the ounce-and-a-half size which airlines served to passengers in flight. Most of the bottles had small airline labels above their brand names, and all were unopened. Making a quick calculation, Demerest estimated there were close to three hundred.

He had seen airline liquor in stewardesses' apartments before, but never quite so much at one time.

"We have some more stashed away in the bedroom," Gwen said brightly from behind him. "We've been saving them for a party. I think we've enough, don't you?"

She had come into the kitchen quietly, and he turned. As always since the beginning of their affair, he found the first

sight of her enchanting and refreshing. Unusual for one who never lacked confidence with women, he had at such moments a heady sense of wonder that he had ever possessed Gwen at all. She was in a trim uniform skirt and blouse which made her seem even younger than she was. Her eager, high-checkboned face was tilted upward, her rich black hair lustrous under the kitchen lights. Gwen's deep dark eyes regarded him with smiling, frank approval. "You can kiss me hard," she said. "I haven't put on makeup yet."

He smiled, her clear melodious English voice delighting him again. As girls from upper-crust British private schools somehow managed to do, Gwen had captured all that was best in English intonation and avoided the worst. At times, Vernon Demerest encouraged Gwen to talk, merely for the joy of hearing her speak.

Not talking now, they held each other tightly, her lips responding eagerly to his.

After a minute or so, Gwen pushed herself away. "No!" she insisted firmly. "No, Vernon dear. Not here."

"Why not? We've time enough." There was a thickness to Demerest's voice, a rough impatience.

"Because I told you—I want to talk, and we don't have time for both." Gwen rearranged her blouse which had parted company with the skirt.

"Hell!" he grumbled. "You bring me to the boil, and then . . . Oh, all right; I'll wait till Naples." He kissed her more gently. "All the way to Europe you can think of me up there on the flight deck, turned to 'simmer.'"

"I'll bring you to the boil again. I promise." She laughed, and leaning close against him, passed her long slim fingers through his hair and around his face.

He groaned. "My God!—you're doing it right now."

"Then that's enough." Gwen took his hands, which were around her waist, and pushed them resolutely from her. Turning away, she moved to close the cupboard he had been looking into.

"Hey, wait a minute. What about all those?" Demerest pointed to the miniature liquor bottles with their airline labels.

"Those?" Gwen surveyed the four crowded shelves, her eyebrows arched, then switched to an expression of injured innocence. "They're just a few little old leftovers that passengers didn't want. Surely, Captain, sir, you're not going to report me for possession of leftovers."

He said skeptically, "That many?"

"Of course." Gwen picked up a bottle of Beefeater gin, put it down and inspected a Canadian Club whisky. "One nice thing about airlines is, they always buy the best brands. Care for one now?"

He shook his head. "You know better than that."

"Yes, I do; but you shouldn't sound so disapproving."

"I just don't want you to get caught."

"Nobody gets caught, and almost everybody does it. Look—every first class passenger is entitled to two of these little bottles, but some passengers use only one, and there are always others who won't have any."

"The rules say you turn back all the unused ones."

"Oh, for heaven's sake! So we do—a couple for appearances, but the rest the girls divide between them. The same thing goes for wine that's left over." Gwen giggled. "We always like a passenger who asks for more wine near the end of a trip. That way, we can officially open a fresh bottle, pour off one glass . . ."

"I know. And take the rest home?"

"You want to see?" Gwen opened another cupboard door. Inside were a dozen filled wine bottles.

Demerest grinned. "I'll be damned."

"This isn't all mine. My roommate and one of the girls next door have been saving theirs for the party we're planning." She took his arm. "You'll come, won't you?"

"If I'm invited, I guess."

Gwen closed both cupboard doors. "You will be."

They sat down in the kitchen, and she poured the tea he had made. He watched admiringly while she did it. Gwen had a way of making even a casual session like this seem an occasion.

He noticed with amusement that she produced cups from a pile in another cupboard, all bearing Trans America insignia. They were the kind the airline used in flight. He supposed he should not have been stuffy about the airline liquor bottles; after all, stewardess "perks" were nothing new. It was just that the size of the hoard amazed him.

All airline stewardesses, he was aware, discovered early in their careers that a little husbandry in airplane galleys could relieve their cost of living at home. Stewardesses learned to board their flights with personal hand baggage which was partially empty, using the space for make-up, hairbrushes,

highest quality, since airlines purchased nothing but the best. A Thermos jug, brought aboard empty, was useful for carrying off spare liquids—cream or even decanted champagne. A stewardess was really enterprising, Demerest was once assured, she could cut her weekly grocery bill in half. Only on international flights where, by law, all food—untouched or otherwise—was incinerated immediately after landing, were the girls more cautious.

All this activity was strictly forbidden by regulations of the airlines—but it still went on.

Another thing stewardesses learned was that no inventory check of removable cabin equipment was ever made at the termination of a flight. One reason was that airlines simply didn't have time; another, it was cheaper to accept some losses than make a fuss about them. Because of this, many stewardesses managed to acquire home furnishings—blankets, pillows, towels, linen napkins, glasses, silverware—in surprising quantity, and Vernon Demerest had been in stewardess nests where most items used in daily living seemed to have come from airline sources.

Gwen broke in on his thoughts. "What I was going to tell you, Vernon, is that I'm pregnant."

It was said so casually that at first the words failed to register. He reacted blankly. "You're what?"

"Pregnant—p-r-e-g-n . . ."

He snapped irritably, "I know how to spell it." His mind was still groping. "Are you sure?"

Gwen laughed—her attractive silvery laugh—and sipped her tea. He sensed she was making fun of him. He was also aware that she had never looked more lovely and desirable than at this moment.

"That line you just said, darling," she assured him, "is an old cliché. In every book I've ever read where there's a scene like this, the man asks, 'Are you sure?'"

"Well, goddammit, Gwen!" His voice rose. "*Are you?*"

"Of course. Or I wouldn't be telling you now." She motioned to the cup in front of him. "More tea?"

"No!"

"What happened," Gwen said calmly, "is perfectly simple. On that layover we had in San Francisco . . . you remember—we stayed at that gorgeous hotel on Nob Hill; the one with the view. What was it called?"

"The Fairmont. Yes, I remember. Go on."

"Well, I'm afraid I was careless. I'd quit taking pills because they were making me overweight; then I thought I didn't need any other precautions that day, but it turned out I was wrong. Anyway, because I was careless, now I have a teeny-weensy little Vernon Demerest inside me who's going to get bigger and bigger."

There was a silence, then he said awkwardly, "I suppose I shouldn't ask this . . ."

She interrupted. "Yes, you should. You're entitled to ask." Gwen's deep dark eyes regarded him with open honesty. "What you want to know is, has there been anyone else, and am I positive it's you? Right?"

"Look, Gwen . . ."

She reached out to touch his hand. "You don't have to be ashamed of asking. I'd ask too, if things were the other way around."

He gestured unhappily. "Forget it. I'm sorry."

"But I want to tell you." She was speaking more hurriedly now, a shade less confidently. "There hasn't been anybody else; there couldn't be. You see . . . I happen to love you." For the first time her eyes were lowered. She went on, "I think I did . . . I know I did . . . love you, I mean—even before that time we had in San Francisco. When I've thought about it, I've been glad of that, because you ought to love someone if you're to have his baby, don't you think so?"

"Listen to me, Gwen." He covered her hands with his own. Vernon Demerest's hands were strong and sensitive, accustomed to responsibility and control, yet capable of precision and gentleness. They were gentle now. Women he cared about always had that effect on him, in contrast to the rough brusqueness with which he dealt with men. "We have to do some serious talking, and make some plans." Now that the first surprise was over, his thoughts were becoming orderly. It was perfectly clear what needed to be done next.

"You don't have to do anything." Gwen's head came up; her voice was under control. "And you can stop wondering whether I'm going to be difficult, or whether I'll make things awkward for you. I won't. I knew what I was getting into, that there was the chance this would happen. I didn't really expect it to, but it has. I had to tell you tonight because the baby's yours; it's part of you; you ought to know. Now I do, I'm also telling you you don't have to worry. I intend to mark this . . ."

"Don't be ridiculous; of course I'll help. You don't imagine I'd walk away and ignore the whole bit." The essential thing he realized, was speed; the trick with unwanted fetuses was to get the little beggars early. He wondered if Gwen had any religious scruples about abortions. She had never mentioned having a religion, but sometimes the most unlikely people were devout. He asked her, "Are you Catholic?"

"No."

Well, he reflected, that helped. Maybe, then, a quick flight to Sweden would be the thing; a few days there was all Gwen would need. Trans America would cooperate, as airlines always did, providing they were not officially involved—the word "abortion" could be hinted at, but must never be mentioned. That way, Gwen could fly deadhead on a Trans America flight to Paris, then go by Air France to Stockholm on a reciprocal employee pass. Of course, even when she got to Sweden, the medical fees would still be damnably expensive; there was a jest among airline people that the Swedes took their overseas abortion customers to the clinic and the cleaners at the same time. The whole thing was cheaper in Japan, of course. Lots of airline stewardesses flew to Tokyo and got abortions there for fifty dollars. The abortions were supposed to be therapeutic, but Demerest mistrusted them. Sweden—or Switzerland—were more reliable. He had once declared: when he got a stewardess pregnant, she went first class.

From his own point of view, it was a bloody nuisance that Gwen had got a bun in the oven at this particular time, just when he was building an extension on his house which, he remembered gloomily, had already gone over budget. Oh well, he would have to sell some stock—General Dynamics probably; he had a nice capital gain there, and it was about time to take a profit. He would call his broker right after getting back from Rome—and Naples.

He asked, "You're still coming to Naples with me?"

"Of course; I've been looking forward to it. Besides, I bought a new negligee. You'll see it tomorrow night."

He stood up from the table and grinned. "You're a shameless hussy."

"A shameless *pregnant* hussy who shamelessly loves you. Do you love me?"

She came to him, and he kissed her mouth, face, and ear. He probed her pinna with his tongue, felt her arm

then in response, then whispered, "Yes, I love you." At the moment, he reflected, it was true.

"Vernon, dear."

"Yes?"

Her cheek was soft against his. Her voice came, muffled, from his shoulder. "I meant what I said. You don't have to help me. But if you really want to, that's different."

"I want to." He decided he would sound her out about an abortion, on their way to the airport.

Gwen disengaged herself and glanced at her watch; it was 20. "It's time, Captain, sir. We'd better go."

"I guess you know you really don't have to worry," Vernon Demerest said to Gwen as they drove. "Airlines are used to having their unmarried stewardesses get pregnant. It happens all the time. The last report I read, the national airline average was ten percent, per year."

Their discussion, he noted approvingly, was becoming increasingly matter-of-fact. Good!—it was important to steer Gwen away from any emotional nonsense about this baby of hers. If she did become emotional, Demerest knew, all sorts of awkward things could happen, impeding commonsense.

He was handling the Mercedes carefully, with the delicate yet firm touch which was second nature to him when controlling any piece of machinery, including a car or airplane. The suburban streets, which were newly cleared when he drove from the airport to Gwen's apartment, were thickly snow-covered again. Snow was still coming down continuously, and there were deepening drifts in wind-exposed places, away from the shelter of buildings. Captain Demerest warily skirted the larger drifts. He had no intention of getting stuck nor did he even want to get out of the car until the shelter of the enclosed Trans America parking lot was reached.

Curled into the leather bucket seat beside him, Gwen said incredulously, "Is that really true—that every year, ten out of every hundred stewardesses get pregnant?"

He assured her, "It varies slightly each year, but it's usually pretty close. Oh, the pill has changed things a bit, but the way I hear it, not as much as you'd expect. As a medical officer I have access to that kind of information."

He waited for Gwen to comment. When she said, "I

to this kind of thing. You know about the Three-Point Pregnancy Program?"

She said shortly, "Yes."

It was natural that Gwen did. Most stewardesses were aware of what airlines would do for them if they became pregnant, providing the stewardess herself agreed to certain conditions. Within Trans America the system was referred to familiarly as the "3-PPP." Other airlines used differing names, and arrangements varied slightly, but the principle was the same.

"I've known girls who've used the 3-PPP," Gwen said. "I didn't think I'd ever need to."

"Most of the others didn't, I guess." He added: "But you wouldn't need to worry. It isn't something that airlines advertise, and it all works quietly. How are we for time?"

Gwen held her wrist watch under the light of the dash. "We're okay."

He swung the Mercedes into a center lane carefully, judging his traction on the wet, snowy surface, and passed a lumbering utilities truck. Several men, probably an emergency crew, were clinging to the sides of the truck as it moved along. They looked weary, wet, and miserable. Demerest wondered what the men's reaction would be if they knew that he and Gwen would be under warm Neapolitan sunshine only hours from now.

"I don't know," Gwen said; "I don't know if I could ever do it."

Like Demerest, Gwen knew the reasoning of management which lay behind airline pregnancy programs. No airline liked losing stewardesses for any reason. Their training was expensive; a qualified stewardess represented a big investment. Another thing: the right kind of girls, with good looks, style, and personality, were hard to find.

The way the programs worked was practical and simple. If a stewardess became pregnant, and did not plan to be married, obviously she could return to her job when her pregnancy was over, and usually her airline would be delighted to have her back. So, the arrangement was, she received official leave of absence, with her job seniority protected. As to her personal welfare, airline personnel departments had special sections which, among other things, would help make medical or nursing home arrangements, either where a girl lived or at some distant point, whichever she preferred.

The airline helped psychologically, too, by letting the girl know that someone cared about her, and was looking out for her interests. A loan of money could sometimes be arranged. Afterward, if a stewardess who had had her child was diffident about returning to her original base, she would be quietly transferred to a new one of her own choosing.

In return for all this, the airline asked three assurances from the stewardess—hence the Three-Point Pregnancy Program.

First, the girl must keep the airline personnel department informed of her whereabouts at all times during her pregnancy.

Second, she must agree that her baby be surrendered for adoption immediately after birth. The girl would never know the baby's adoptive parents; thus, the child would pass out of her life entirely. However, the airline guaranteed that proper adoption procedures would be followed, with the baby being placed in a good home.

Third—at the outset of the three-point program the stewardess must inform the airline of the name of the child's father. When she had done so, a representative from Personnel—experienced in such situations—promptly sought out the father with the objective of obtaining financial support for the girl. What the personnel man tried to obtain was a promise, in writing, of enough money to cover medical and nursing home expenses and, if possible, some or all of the stewardess's lost wages. Airlines preferred such arrangements to be amiable and discreet. If they had to, though, they could get tough, using their considerable corporate influence to bring pressure on non-cooperating individuals.

It was seldom necessary to be tough where the father of a stewardess's baby was a flying crew member—a captain, or first or second officer. In such cases, gentle company suasion, plus the father's wish to keep the whole thing quiet, were usually enough. As to keeping quiet, the company obliged. Temporary support payments could be made in any reasonable way, or, if preferred, the airline made regular deductions from the employee's pay checks. Just as considerately, to avoid awkward questions at home, such deductions appeared under the heading: "personal misc."

All money received by these means was paid, in its entirety, to the pregnant stewardess. The airline deducted nothing for its own costs.

man do you think I am? Of course I helped her. If you know, the company made deductions from my pay check. That's how I knew about the way it's done."

Gwen smiled. "Personal misc.?"

"Yes."

"Did your wife ever know?"

He hesitated before answering. "No."

"What happened to the baby?"

"It was adopted."

"What was it?"

"Just a baby."

"You know perfectly well what I mean. Was it a boy or a girl?"

"A girl, I think."

"You *think*."

"I know. It was a girl."

Gwen's questioning made him vaguely uncomfortable. It revived memories he would as soon forget.

They were silent as Vernon Demerest swung the Mercedes into the airport's wide and imposing main entry. High above the entry, soaring and floodlighted, were the futuristic parabolic arches—acclaimed achievement of a world-wide design contest—symbolizing, so it was said, the noble dreams of aviation. Ahead was an impressive, serpentine complex of roads, interchanges, flyovers, and tunnels, designed to keep the airport's unceasing vehicular traffic flowing at high speed, though tonight the effects of the three-day storm were making progress slower than usual. Great mounds of snow were occupying normally usable road space. Snowplows and dump trucks, trying to keep remaining areas open, were adding their own confusion.

After several brief hold-ups, Demerest turned onto the service road which would bring them to the Trans America main hangar area, where they would leave the car and take a crew bus to the terminal.

Gwen stirred beside him. "Vernon."

"Yes."

"Thank you for being honest with me." She reached out, touching his nearer hand on the steering wheel. "I'll be all right. I expect it was just a bit much, all at once. And I *do* want to go with you to Naples."

He nodded and smiled, then took his hand off the wheel

and needed to be saved from burning itself out. The difference, though, between a motor and a human brain, was that motor stayed out of action if it needed to.

A brain would not.

The floodlights outside, on the face of the control tower, reflected enough light inward through the locker room's single window for Keith to see. Not that he needed to see. Seated on one of the wooden benches, the sandwiches Natalie had made, untouched, beside him, he was doing nothing more than holding the O'Hagan Inn key and thinking, reflecting on the paradox of the human brain.

A human brain could achieve soaring imagery, conceive poetry and radarscopes, create the Sistine Chapel and a personal Concordé. Yet a brain, too—holding memory and conscience—could be compelling, self-tormenting, never resting; so that only death could end its persecution.

Death . . . with oblivion, forgetfulness; with rest at last.

It was the reason that Keith Bakersfeld had decided on suicide tonight.

He must go back soon to the radar room. There were still several hours of his shift remaining, and he had made a pact with himself to finish his air traffic control duty for tonight. He was not sure why, except that it seemed the right thing to do, and he had always tried to do the right thing, conscientiously. Perhaps being conscientious was a family trait; and his brother Mel always seemed to have that much in common.

Anyway, when the duty was done—his final obligation fulfilled—he would be free to go to the O'Hagan Inn, where he had registered late this afternoon. Once there, without saving time, he would take the forty Nembutal capsules—four grains in all—which were in a drugstore pillbox in his pocket. He had husbanded the capsules, a few at a time, over recent months. They had been prescribed to give him sleep, and from each prescription which Natalie's druggist delivered, he had carefully extracted half and hidden it. A few days ago he had gone to a library, checking a reference on clinical toxicology to assure himself that the quantity of Nembutal he had was well in excess of a fatal dose.

His present duty shift would end at midnight. Soon after, he had taken the capsules, sleep would come quickly with finality.

He looked at his watch, holding its face toward the light

miliar low, modern buildings of the Air Route Center came in sight, he had felt less tense than usual. Afterward, he wondered if that, in itself, had been a cause of the event which followed.

Even inside the Operations Wing—thick-walled and windowless, where daylight never penetrated—Keith had an impression that the glory of the summer's day outside had somehow percolated inward. Among the seventy or more shirtsleeved controllers on duty there seemed a sense of lightness, in contrast to the pressure-driven earnestness with which work proceeded on most days of the year. One reason, perhaps, was that the traffic load was less than usual, due to the exceptionally clear weather. Many non-commercial flights—private, military, even a few airliners—were operating on VFR—"visual flight rules," or the see-and-be-seen method by which aircraft pilots kept track of their own progress through the air, without need to report by radio to ATC air route controllers.

The Washington Air Route Center at Leesburg was a key control point. From its main operations room all air traffic on airways over six eastern seaboard states was observed and directed. Added up, the control area came to more than a hundred thousand square miles. Within that area, whenever an aircraft which had filed an instrument flight plan left an airport, it came under Leesburg observation and control. It remained under that control either until its journey was complete or it passed out of the area. Aircraft coming into the area were handed over from other control centers, of which there were twenty across the continental United States. The Leesburg center was among the nation's busiest. It included the southern end of the "northeast corridor" which daily accommodated the world's heaviest concentration of air traffic.

Oddly, Leesburg was distant from any airport, and forty miles from Washington, D.C., from which the Air Route Center took its name. The center itself was in Virginia countryside—a cluster of low, modern buildings with a parking lot—and was surrounded on three sides by rolling farmland. Nearby was a small stream named Bull Run—its fame enshrined forever by two battles of the Civil War. Keith Bakersfeld had once gone to Bull Run after duty, reflecting on the strange and diametric contrast between Leesburg's past and present.

of the other three. Today, in addition, the team had a trainee controller whom Keith had been instructing, at intervals, over the past several weeks.

Others of the team were drifting in at the same time as Keith Bakersfeld, taking position behind the men they were to relieve, and allowing a few minutes while they absorbed the "picture" in their minds. All through the big control room, at other positions, the same thing was happening.

Standing at his own sector, behind the radar controller about to go off duty, Keith already felt his mental acuity sharpen, his speed of thinking consciously accelerate. For the next eight hours, except for two brief work breaks, his brain must continue to operate that way.

Traffic, he observed, was averagely busy for the time of day, taking into account the widespread good weather. On the scope's dark surface, some fifteen pinpoints of bright green light—or "targets," as radarmen called them—indicated aircraft in the air. Allegheny had a Convair 440 at eight thousand feet, approaching Pittsburgh. Behind the Allegheny flight, at varying altitudes, was a National DC-8, an American Airlines 727, two private aircraft—a Lear jet and a Fairchild F-27—and another National, this time a prop-jet Electra. Several other flights, Keith noted, were due to come on the screen at any moment, both from other sectors and as a result of takeoffs from Friendship Airport, Baltimore. Going the opposite way, toward Baltimore, was a Delta DC-9, about to be taken over by Friendship approach control; behind this flight were a TWA, a Piedmont Airlines Martin, another private flight, two Uniteds, and a Mohawk. Height and distance separations of all aircraft were satisfactory, Keith observed, except that the two Uniteds heading for Baltimore were a little close. As if the controller still at the scope had read Keith's mind, he gave the second United a delaying diversionary course.

"I have the picture," Keith said quietly. The other controller nodded and moved out.

Keith's supervisor, Perry Yount, plugged in his headset above Keith's head and leaned over, making his own assessment of the traffic situation. Perry was a tall, lean Negro, a few years younger than Keith. He had a quick, retentive memory which could store a mass of flight data, then repeat it back, as a whole or in pieces, with computer accuracy.

The risks involved, and extra mental pressures, were such that many controllers refused to take them. They pointed out that the task of teaching their work to others carried neither official recognition nor extra pay. Moreover, if anything went wrong, the instructing controller was wholly responsible. Why suffer so much strain and liability for nothing?

Keith, however, had shown an aptitude as an instructor as well as patience in bringing trainees along. And although he, too, suffered and sweated at times, he did the job because he felt he should. At this moment, he took a personal pride in the way George Wallace had developed.

Wallace said quietly again, "I'd turn United 284 right until you get altitude separation with Mohawk."

Keith nodded agreement as he thumbed his microphone button. "United Flight 284, from Washington center. Turn right, heading zero six zero."

Promptly the reply crackled back. "Washington control, this is United 284. Roger; zero six zero." Miles distant, and high above in clear bright sunshine while passengers dozed or read, the powerful sleek jet would be easing into a smooth controlled turn. On the radarscope, the bright green half inch wide blip which was United 284 began moving in a new direction.

Below the control area, in a room devoted to rack upon rack of ponderously turning tape recorders, the exchange between ground and air had been recorded—for playback later if need arose. Every such conversation, from each position in the control room, was recorded and stored. Periodically, some of the tapes were replayed and listened to critically by supervisors. If a procedure was wrong, a controller heard about it; yet no controller knew when a recording of his own might be selected for analysis. On a door of the tape-recorder room was the grimly humorous reminder, "*Big Brother Is Listening.*"

The morning progressed.

Periodically, Perry Yount appeared. He was still overseeing two positions and stayed long enough to assess the current traffic situation. What he saw seemed to satisfy him, and he spent less time behind Keith than at the other position, where several problems seemed to be occurring. Around mid-morning the air traffic volume eased slightly; it would pick up again before midday. Soon after 10:30 A.M. Keith Bakersfeld and George Wallace exchanged positions. The trainee was

at the scope, Keith checking from alongside. There was need, Keith found, for intervention; young Wallace was being competent and alert. As far as was possible in the circumstances, Keith relaxed.

At ten to eleven, Keith was aware of a need to visit the pit. In recent months, he had had several bouts with intestinal flu; he had a suspicion that this was the beginning of another. He signaled Perry Yount and told him.

The supervisor nodded. "Is George doing okay?"

"Like a veteran." Keith said it loud enough so George could hear.

"I'll hold things down," Perry said. "You're relieved, Keith."

"Thanks."

Keith signed the sector log sheet and noted his time of checking out. Perry scribbled an initial on the next line of the log, accepting responsibility for monitoring Wallace. In a few minutes time, when Keith returned, they would follow the same procedure.

As Keith Bakersfeld left the control room, the supervisor was studying the scope, his hand lightly on George Wallace's shoulder.

The washroom Keith had gone to was on an upper level; a frosted-glass window admitted some of the brightness of the day outside. When Keith had finished, and freshened himself with a wash, he went to the window and opened it. He wondered if the weather was still as superb as when he had arrived earlier. It was.

From the rear of the building into which the window was set, he could see—beyond a service area—green meadows, trees, and wild flowers. The heat was greater now. All around was a drowsy hum of insects.

Keith stood looking out, aware of a reluctance to leave the cheerful sunlight and return to the control room's gloom. It occurred to him that lately he had had similar feelings at other times—too many times, perhaps; and he thought—if he was honest, it was not the gloom he minded so much, but the mental pressures. There was a time when the tensions and pressures of his job, unrelenting as they were, had never bothered him. Nowadays they did, and on occasions he had to force himself, consciously, to meet them.

While Keith Bakersfeld was standing at the window, thinking, a Northwest Orient 727 jet, en route from Minneapolis-

The risks involved, and extra mental pressures, were such that many controllers refused to take them. now at the scope, Keith checking from alongside. There was no need, Keith found, for intervention; young Wallace was proving competent and alert. As far as was possible in the circumstances, Keith relaxed.

At ten to eleven, Keith was aware of a need to visit the toilet. In recent months, he had had several bouts with intestinal flu; he had a suspicion that this was the beginning of another. He signaled Perry Yount and told him.

The supervisor nodded. "Is George doing okay?"

"Like a veteran." Keith said it loud enough so George could hear.

"I'll hold things down," Perry said. "You're relieved, Keith."

"Thanks."

Keith signed the sector log sheet and noted his time of ecking out. Perry scribbled an initial on the next line of a log, accepting responsibility for monitoring Wallace. In a few minutes time, when Keith returned, they would follow the same procedure.

As Keith Bakersfeld left the control room, the supervisor was studying the scope, his hand lightly on George Wallace's shoulder.

The washroom Keith had gone to was on an upper level; a frosted-glass window admitted some of the brightness of the day outside. When Keith had finished, and freshened himself with a wash, he went to the window and opened it. He wondered if the weather was still as superb as when he had arrived earlier. It was.

From the rear of the building into which the window was set, he could see—beyond a service area—green meadows, trees, and wild flowers. The heat was greater now. All around was a drowsy hum of insects.

Keith stood looking out, aware of a reluctance to leave the cheerful sunlight and return to the control room's gloom. It occurred to him that lately he had had similar feelings at other times—too many times, perhaps; and he thought—if he was honest, it was not the gloom he minded so much, but the mental pressures. There was a time when the tensions and pressures of his job, unrelenting as they were, had never bothered him. Nowadays they did, and on occasion he had to force himself, consciously, to meet them.

While Keith Bakersfeld was standing at the

Wash-
room

St. Paul, was nearing Washington, D.C. Within its cabin a stewardess was bending over an elderly male passenger. His face was ashen; he seemed unable to speak. The stewardess believed he had had, or was having, a heart attack. She hurried to the flight deck to inform the captain. Moments later, acting on the captain's orders, the Northwest first officer asked Washington Air Route Center for special clearance down, with priority handling to Washington National Airport.

Keith wondered sometimes—as he was wondering now—how many more years he could force his occasionally weary mind to go on. He had been a controller for a decade and a half. He was thirty-eight.

The depressing thing was—in this business you could be mentally drained, an old man, at age forty-five or fifty, yet honorable retirement was another ten or fifteen years away. For many air traffic controllers, those final years proved an all-too-grueling trail, whose end they failed to reach.

Keith knew—as most controllers did—that strains on the human systems of those employed in air traffic control had long been recognized. Official flight surgeons' files bulged with medical evidence. Case histories, directly attributable to controllers' work, included hypertension, heart attacks, gastric ulcers, tachycardia, psychiatric breakdowns, plus a host of lesser ailments. Eminent, independent medics, in scholarly research studies, had confirmed such findings. In the words of one: "A controller will spend nervous, sleepless hours every night wondering how in the name of heaven he kept all those planes from running into each other. He managed not to cause a disaster today, but will he have the same luck tomorrow? After a while, something inside him—physical, mental, oftentimes both—inevitably breaks down."

Armed with this knowledge, and more, the Federal Aviation Agency had urged Congress to allow air traffic controllers to retire at age fifty, or after twenty years of service. The twenty years, doctors declared, were equal to forty in most other jobs. The FAA warned legislators: public safety was involved; controllers, after more than twenty years of service, were potentially unsafe. Congress, Keith remembered, had ignored the warning and refused to act.

Subsequently, a Presidential Commission also turned thumbs down on early retirement for controllers, and the FAA—then a presidential agency—had been told to cease

d desist in its argument. Now, officially, it had. Privately, however—as Keith and others knew—Washington FAA officials were as convinced as ever; they predicted that the question would arise again, though only after an air disaster, or a crisis, involving worn-out controllers, followed by press and public furor.

Keith's thoughts switched back to the countryside. It was glorious today; the fields inviting, even when viewed from a washroom window. He wished he could go out there and sleep in the sun. Well, he couldn't, and that was that. He supposed he had better get back to the control room. He could—in just a moment more.

The Northwest Orient 727 had already started down, on authority from Washington Center. At lower altitudes, other flights were being hurriedly diverted, or ordered to orbit, safe distances away. A slanting hole, through which Northwest would continue descending, was being cleared in the growing midday traffic. Approach control at Washington National Airport had been alerted; its function would come shortly when it accepted the Northwest jet from Washington Center. At this moment, responsibility for the Northwest flight and other aircraft devolved on the sector team next to Keith's—the extra sector which the young Negro, Perry Yount, was supervising.

Fifteen aircraft with combined speeds totaling seven thousand five hundred miles per hour were being juggled in an airspace a few miles wide. No airplane must come near another. The Northwest flight must be brought down, safely, through them all.

Similar situations happened several times a day; in bad weather it could be several times an hour. Sometimes emergencies came together, so that controllers numbered them

on course, descending. In a few minutes, the emergency situation would be over.

Amid the pressures, Perry Yount even found time to slip across to the adjoining position—which normally would have his undivided attention—to check George Wallace. Everything looked good, though Perry knew he would be easier in mind when Keith Bakersfeld was back. He glanced toward the control room door. No sign of Keith yet.

Keith—still at the open window, still looking out at the Virginia countryside—was remembering Natalie. He sighed. Lately, there had been disagreements between them, triggered by his work. There were points of view which his wife could or would not see. Natalie was concerned about Keith's health. She wanted him to give up air _____, and choose some other occupation _____ and _____ most of his health remained. It _____, _____ realized now, to confide his doubts to Natalie, to describe what he had seen happen to other controllers whose work had made them prematurely old and ailing. Natalie had become alarmed, perhaps with reason. But there were considerations to giving up a job, walking away from years of training and experience; considerations which it was hard for Natalie—or for any woman, he supposed—to grasp.

Over Martinsburg, West Virginia—some thirty miles northwest of Washington Route Center—a private, four-place Beech Bonanza, at seven thousand feet, was leaving Airway V166 and entering Airway V44. The little Beech Bonanza, identifiable visually by its butterfly tail, was cruising at 175 mph, its destination Baltimore. It contained the Redfern family: Irving Redfern, a consulting engineer-economist, his wife Merry, and their two children—Jeremy, ten years old, and Valerie, nine.

Irving Redfern was a careful, thorough man. Today, because of favorable weather conditions, he could have flown using visual flight rules. However, he considered it more prudent to file an instrument flight plan and, since leaving his home airport of Charleston, West Virginia, had stayed on airways, remaining in touch with air traffic control. A few moments earlier, Washington Route Center had given him a new course on Airway V44. He had already turned on it and

now his magnetic compass, which had been swinging slightly, was settling down nicely.

The Redferns were going to Baltimore partly for Irving Redfern's business, and partly for pleasure, which would include a family theatre outing tonight. While their father was concentrating on his flying, the children, with Merry, were chattering about what they would have for lunch at Friendship Airport.

The Washington Center controller who had given Irving Redfern his latest instructions was George Wallace, the almost-qualified trainee still filling in for Keith Bakersfeld. George had correctly identified the Redferns' Beechcraft on his radarscope, where it appeared as a bright green dot, though smaller and moving more slowly than most other traffic—at the moment, principally airline jets. There was nothing closing up on the Beechcraft, however, which appeared to have plenty of airspace all around it. Perry Yount, the sector supervisor, had by now returned to the adjoining position. He was helping sort out the aftermath confusion now that the critical Northwest Orient 727 had been handed over safely to Washington National Airport approach control. Periodically, Perry glanced across at George and once called out, "Is everything okay?" George Wallace nodded, though he was beginning to sweat a little. Today's heavier noontime traffic seemed to be building up earlier than usual.

Unknown to George Wallace or Perry Yount or Irving Redfern, an Air National Guard T-33 jet trainer was flying—at the moment idly in circles—a few miles north of Airway V44. The T-33 was from Martin Airport, near Baltimore, and its National Guard pilot was an automobile salesman named Hank Neel.

Lieutenant Neel, who was fulfilling his part-time military training requirements, had been sent up solo for VFR proficiency flying. Because he had been cautioned to do only local flying in an authorized area northwest of Baltimore, no flight plan had been filed; therefore, Washington Air Route Center had no knowledge that the T-33 was in the air. This would not have mattered, except that Neel had become bored with his assignment and was also a careless pilot. Looking out casually, as he held the jet trainer in lazy circles, he realized he had drifted south while practicing maneuvers, though in reality he had come a good deal farther than he imagined. He was so far south that

Guard jet had entered George Wallace's radar control area and now appeared on Wallace's screen at Leesburg as a green dot, slightly larger than the Redfern family's Beech Bonanza. A more experienced controller would have recognized the dot instantly for what it was. George, however, still busy with other traffic, had not yet observed the extra, unidentified signal.

Lieutenant Neel, at fifteen thousand feet, decided he would finish his flying practice with some aerobatics—two loops, a couple of slow rolls—and then return to base. He swung the T-33 into a steep turn and circled again while he took the standard precaution of looking for other airplanes above and below. He was now even closer than before to Airway V44.

The thing his wife failed to realize, Keith Bakersfeld thought, was that a man couldn't just quit his job irresponsibly, on a whim, even if he wanted to. Especially when the man had a family to support, children to educate. Especially when the job you possessed, the skills you so patiently acquired, had fitted you for nothing else. In some branches of government service, employees could leave and utilize their proficiency elsewhere. Air traffic controllers could not. Their work had no counterpart in private industry; no one else wanted them.

Being trapped that way—which was what it amounted to, Keith recognized—was a disillusion which came with other disillusion. Money was one. When you were young, enthusiastic, wanting to be a part of aviation, the civil service pay scale of an air traffic controller seemed adequate or better. Only later did it become clear how inadequate—in relation to the job's awesome responsibility—that pay scale was. The two most skillful specialists involved in air traffic nowadays were pilots and controllers. Yet pilots earned thirty thousand dollars a year while a senior controller reached his ceiling at ten thousand. No one believed pilots should earn less. But even pilots, who were notoriously selfish in taking care of themselves, believed air traffic controllers should earn more.

Nor was promotion—as in most other occupations—something an air traffic controller could look forward to. Senior supervisory posts were few; only a fortunate handful ever attained them.

And yet . . . unless you were reckless or uncaring—which controllers, by the nature of their work, were not—there was

no way out. So there would be no quitting for himself, Keith decided. He must have another talk with Natalie; it was time she accepted that for better or worse, it was too late for change. He had no intention, at this stage, of scratching inadequately for some other kind of living.

He really must go back. Glancing at his watch, he realized guiltily that it was almost fifteen minutes since he left the control room. For part of the time he had been daydreaming—something he rarely did, and it was obviously the somniferous effect of the summer's day. Keith closed the washroom window. From the corridor outside, he hurried downward to the main control room.

High over Frederick County, Maryland, Lieutenant Neel straightened up his National Guard T-33 and eased on forward trim. Neel had completed his somewhat casual inspection and had seen no other aircraft. Now, beginning his first loop and slow roll, he put the jet trainer into a steep dive.

Entering the control room, Keith Bakersfeld was aware at once of an increased tempo. The hum of voices was louder than when he left. Other controllers were too preoccupied to glance up—as they had done earlier this morning—as he passed by them on the way to his own position. Keith scribbled a signature in the sector log and noted the time, then moved behind George Wallace, getting the picture, letting his eyes adjust to the control room semidarkness, in sharp contrast to the bright sunlight outside. George had murmured "Hi!" as Keith returned, then continued transmitting radio instructions to traffic. In a moment or two, when Keith had the picture, he would relieve George and slip into his seat. It had probably been good for George, Keith reasoned to be on his own for a while; it would improve his confidence. From the adjoining sector console, Perry Young had noted Keith's return.

Keith studied the radarscope and its moving pinpoint of light—the aircraft "targets" which George had identified then noted on small movable markers on the screen. A bright green dot without identification caught Keith's eye. He asked George sharply, "What's the other traffic near the Bonanza 403?"

Lieutenant Neel had

over Frederick County, though a little farther south. He leveled the T-33 jet, then put the nose down sharply and began a dive into a second loop.

"What other traffic . . . ?" George Wallace's eyes followed Keith's across the radarscope. He gasped; then in a strangled voice—"My God!"

With a swift, single movement, Keith ripped the radio headset from George and shouldered him aside. Keith flung a frequency switch open, snapped a transmit button down. "Beech Bonanza NC-403, this is Washington Center. There is unidentified traffic to your left. Make an immediate right turn now!"

The National Guard T-33 was at the bottom of its dive. Lieutenant Neel pulled the control column back and, with full power on, began a fast, steep climb. Immediately above was the tiny Beech Bonanza, containing Irving Redfern and his family, cruising steadily on Airway V44.

In the control room . . . breathlessly . . . silently . . . praying hard . . . they watched the closing, bright green dots.

The radio crackled with a burst of static. "Washington Center, this is Beech . . ." Abruptly the transmission stopped.

Irving Redfern was a consulting engineer-economist. He was a competent amateur pilot, but not a commercial one.

An airline pilot, receiving the Washington Center message, would have flung his aircraft instantly into a steep right turn. He would have caught the urgency in Keith's voice, would have acted, without waiting to trim, or acknowledge, or—until later—question. An airline pilot would have ignored all minor consequences except the overriding urgency of escaping the nearby peril which the route center message unmistakably implied. Behind him, in the passenger cabin, scalding coffee might have spilled, meals scattered, even minor injuries resulted. Later there would have been complaints, apologies, denunciations, perhaps a Civil Aeronautics Board inquiry. But—with ordinary luck—there could have been survival. Quick action could have insured it. It would have insured it for the Redfern family, too.

Airline pilots were conditioned, by training and usage, to

wift, sure reflexes. Irving Redfern was not. He was a precise, scholarly man, accustomed to think before acting, and to following correct procedures. His first thought was to acknowledge the Washington Center message. Thus, he used up two or three seconds—all the time he had. The National Guard T-33, swooping upward from the bottom of its loop, struck the Redferns' Beech Bonanza on the left side, slicing off the private aircraft's port wing with a single screeching rip of metal. The T-33, mortally damaged itself, continued upward briefly while its forward section disintegrated. Scarcely knowing what was happening—he had caught only the briefest glimpse of the other plane—Lieutenant Neel ejected and waited for his parachute to open. Far below, out of control and spinning crazily, the Beechcraft Bonanza, with the Redfern family still inside, was plummeting to earth.

Keith's hands were trembling as he tried again. "Beech Bonanza NC-403, this is Washington Center. Do you read?"

Beside Keith, George Wallace's lips moved silently. His face was drained of color.

As they watched in horror, the dots on the radarscope converged, blossomed suddenly, then faded.

Perry Yount, aware of something wrong, had joined them. "What is it?"

Keith's mouth was dry. "I think we've had a mid-air."

It was then it happened: the nightmarish sound which those who heard it wished that they had not, yet afterward would not be able to erase from memory.

In the pilot's seat of the doomed, spinning Beech Bonanza, Irving Redfern—perhaps involuntarily, perhaps as a last despairing act—pressed the transmit button of his microphone and held it down. The radio still worked.

At Washington Center, the transmission was heard on a console speaker which Keith had switched in when his emergency transmissions began. At first there was a burst of static, then immediately a succession of piercing, frantic, chilling screams. Elsewhere in the control room, heads turned. Faces nearby paled. George Wallace was sobbing hysterically. Senior supervisors came hurrying from other sections.

Suddenly, above the screaming clearly, a single voice—terrified, forlorn, beseeching—

audible. Only later, when the tape recording of the last transmission was played and replayed many times, were the full words put together, the voice identified as that of Valerie Redfern, nine years old.

"... Mummy! Daddy! ... Do something! I don't want to die ... Oh, Gentle Jesus, I've been good ... Please, I don't want ..."

Mercifully, the transmission stopped.

The Beech Bonanza crashed and burned near the village of Lisbon, Maryland. What remained from the four bodies was unrecognizable and was buried in a common grave.

Lieutenant Neel landed safely by parachute, five miles away.

All three controllers involved in the tragedy—George Wallace, Keith Bakersfeld, Perry Yount—were at once suspended from duty, pending investigation.

Later, the trainee, George Wallace, was held technically not to blame, since he was not a qualified controller when the accident occurred. He was, however, dismissed from government service and barred forever for further employment in air traffic control.

The young Negro supervisor, Perry Yount, was held wholly responsible. The investigating board—taking days and weeks to play back tapes, examine evidence, and review decisions which Yount himself had had to make in seconds, under pressure—decided he should have spent less time on the emergency involving the Northwest Orient 727 and more in supervising George Wallace during the absence of Keith Bakersfeld. The fact that Perry Yount was doing double duty—which, had he been less cooperative, he could have refused—was ruled not relevant. Yount was officially reprimanded, and reduced in civil service grade.

Keith Bakersfeld was totally exonerated. The investigating board was at pains to point out that Keith had requested to be temporarily relieved from duty, that his request was reasonable, and he followed regulations in signing out and in. Furthermore, immediately on return, he perceived the possibility of a mid-air collision and tried to prevent it. For his quick thinking and action—though the attempt was unsuccessful—he was commended by the board.

The question of the length of Keith's absence from the control room did not arise initially. Near the end of the in-

in serious trouble with the Military Police. According to stories, Wallace repeatedly started fist fights and brawls in which he appeared to go out of his way to bring physical punishment on himself. The rumors were not confirmed.

For Keith Bakersfeld, it seemed for a while as if life would go on as usual. When the investigation ended, his temporary suspension was lifted; his qualifications and government service rating remained intact. He returned to work at Leesburg. Colleagues, aware that Keith's experience could easily have been their own, were friendly and sympathetic. His work, at first, went well enough.

After his abortive attempt to raise the subject before the investigating board, Keith confided to no one—not even to Natalie—the fact of his washroom loitering that fateful day. Yet the secret knowledge was seldom far from the forefront of his mind.

At home, Natalie was understanding and, as always, loving. She sensed that Keith had undergone a traumatic shock from which he would need time to recover, and she attempted to meet his moods—to talk or be animated when he felt like it, to stay silent when he did not. In quiet, private sessions Natalie explained to the boys, Brian and Theo, why they, too, should show consideration for their father.

In an abstracted way, Keith understood and appreciated what Natalie was trying to do. Her method might eventually have succeeded, except for one thing—an air traffic controller needed sleep. Keith was getting little sleep and, some nights, none.

On the occasions he did sleep, he had a persistent dream in which the scene in the Washington Center control room, moments before the mid-air collision, was re-created . . . the merging pinpoints of light on the radarscope . . . Keith's last desperate message . . . the screams; the voice of little Valerie Redfern . . .

Sometimes the dream had variations. When Keith tried to move toward the radarscope to seize George Wallace's radio headset and transmit a warning, Keith's limbs resisted, and would change position only with frustrating slowness, as if the air surrounding them were heavy sludge. His mind warned frantically: If he could only move freely, the tragedy could be averted. . . . Although his body strained and fought, he always reached his goal too late. At other times he attained the headset, but his voice would fail. He knew that if he

could articulate words, a warning would suffice, the situation could be saved. His mind would race, his lungs and larynx strain, but no sound came.

But even with variations, the dream always ended the same way—with the Beech Bonanza's last radio transmission as he heard it so many times during the inquiry, on the played-back tape. And afterward, with Natalie asleep beside him, he would lie awake, thinking, remembering, longing for the impossible—to change the shape of things past. Later still, he would resist sleep, fighting for wakefulness, so he would not endure the torture of the dream again.

It was then that in the loneliness of night, his conscience would remind him of the stolen, wasted minutes in the route center washroom; crucial minutes when he could have returned to duty, and should have done, but through idleness and self-concern had failed to do so. Keith knew—as others did not—that the real responsibility for the Redfern tragedy was his own, not Perry Yount's. Perry had been a circumstantial sacrifice, a technical victim. Perry had been Keith's friend, had trusted Keith that day to be conscientious, to come back to the control room as quickly as he could. Yet Keith, though knowing his friend was standing double duty, aware of the extra pressures on him, had been twice as long as he needed to be, and had let Perry down; so in the end, Perry Yount stood accused and convicted in Keith's place.

Perry for Keith—a sacrificial goat.

But Perry, though grievously wronged, was still alive. The Redfern family was dead. Dead because Keith doodled mentally, dallying in the sunshine, leaving a semi-experienced trainee too long with responsibilities which were rightly Keith's, and for which Keith was better qualified. There could be no question that had he returned sooner, he would have spotted the intruding T-33 long before it neared the Redfern's plane. The proof was that he *had* spotted it when he did return—too late to be of use.

Around and around . . . over and over in the night . . . as if committed to a treadmill . . . Keith's mind labored on, self-torturing, sick with grief, recrimination. Eventually he would sleep from exhaustion, usually to dream, and to awake again.

In daytime, as well as night, the memory of the Redferns persisted. Irving Redfern, his wife . . .

of Keith's own children, Brian and Theo—alive and well—appeared a personal reproach. Keith's own living, breathing, seemed to him an accusation.

The effect of sleepless nights, the mental turmoil, showed quickly in his work. His reactions were slow, decisions hesitant. A couple of times, under pressure, Keith "lost the picture" and had to be helped. Afterward he realized he had been under close surveillance. His superiors knew from experience what might happen, had half-expected some such signs of strain.

Informal, friendly talks followed, in upper-level offices, which achieved nothing. Later, on a suggestion from Washington, and with Keith's consent, he was transferred from the East Coast to the Midwest—to Lincoln International for control tower duty. A change of locale, it was believed, would prove therapeutic. Officialdom, with a touch of humanity, was also aware that Keith's older brother, Mel, was general manager at Lincoln; perhaps Mel Bakersfeld's influence would be steadying too. Natalie, though loving Maryland, made the transition without complaint.

The idea hadn't worked.

Keith's sense of guilt persisted; so did the nightmare which grew, and took on other patterns, though always the basic one remained. He slept only with the aid of barbiturates prescribed by a physician friend of Mel's.

Mel understood part of his brother's problem, but not all. Keith still kept the secret knowledge of his washroom dawdling at Leesburg solely to himself. Later, watching Keith's deterioration, Mel urged him to seek psychiatric help, but Keith refused. His reasoning was simple. Why should he seek some panacea, some ritualistic mumbo-jumbo to insulate his guilt, when the guilt was real, when nothing in heaven or earth or clinical psychiatry could ever change it?

Keith's dejection deepened until even Natalie's resilient nature rebelled against his moods. Though aware that he slept badly, Natalie had no knowledge of his dreams. One day she inquired in anger and impatience, "Are we supposed to wear hair shirts for the rest of our lives? Are we never to have fun again, to laugh the way we used to? If you intend to go on this way, you'd better understand one thing—I don't, and I won't let Brian and Theo grow up around this kind of misery either."

When Keith hadn't answered, Natalie went on, "I've told

you before: our lives, our marriage, the children, are more important than your work. If you can't take that kind of work any more—and why should you if it's that demanding?—then give it up now, get something else. I know what you always tell me: the money'll be less; you'd throw away your pension. But that isn't everything; we'd manage somehow. I'll take all the hardship you can give me, Keith Bakersfeld, and maybe I'd complain a little, but not much, because anything would be better than the way we are right now." She had been close to tears, but managed to finish. "I'm warning you I can't take much more. If you're going on like this, it may have to be alone."

It was the only time Natalie had hinted at the possibility of their marriage breaking up. It was also the first time Keith considered suicide.

Later, his idea hardened to resolve.

The door of the darkened locker room opened. A switch snapped on. Keith was back again in the control tower at Lincoln International, blinking in the overhead light's glare.

Another tower controller, taking his own work break, was coming in. Keith put away his untouched sandwiches, closed his locker, and walked back toward the radar room. The other man glanced at him curiously. Neither spoke.

Keith wondered if the crisis involving the Air Force KC-135, which had had radio failure, had ended yet. Chances were, it had; that the aircraft and its crew had landed safely. He hoped so. He hoped that something good, for someone, would survive this night.

As he went in, he touched the O'Hagan Inn key in his pocket to be sure, once again, that it was there. He would need it soon.

4

It was almost an hour since Tanya Livingston had left Mel Bakersfeld in the central lobby of the main terminal. Even now, though other incidents had intervened, she remembered the way their hands touched at the elevator, the tone he used when he had said, "It'll give me a reason to see you again tonight."

Tanya hoped very much that Mel remembered too, and—though she was aware he had to go downtown—that he would find time to stop by first.

The "reason" Mel referred to—as if he needed one—was his curiosity about the message received by Tanya while in the coffee shop. "There's a stowaway on Flight 80," a Trans America agent had told her. "They're calling for you," and "the way I hear it, this one's a dilly."

The agent had already been proved right.

Tanya was once more in the small, private lounge behind the Trans America check-in counters where earlier this evening she had comforted the distraught young ticket agent, Patsy Smith. But now, instead of Patsy, Tanya faced the little old lady from San Diego.

"You've done this before," Tanya said. "Haven't you?"

"Oh yes, my dear. Quite a few times."

The little old lady sat comfortably relaxed, hands folded daintily in her lap, a wisp of lace handkerchief showing between them. She was dressed primly in black, with an old-fashioned high-necked blouse, and might have been somebody's great-grandmother on her way to church. Instead she had been caught riding illegally, without a ticket, between Los Angeles and New York.

There had been stowaways, Tanya recalled reading somewhere, as long ago as 700 B.C., on ships of the Phoenicians which plied the eastern Mediterranean. At that time, the penalty for those who were caught was excruciating death—disembowelment of adult stowaways, while children were burned alive on sacrificial stones.

Since then, penalties had abated, but stowaways had not.

Tanya wondered if anyone, outside a limited circle of airline employees, realized how much of a stowaway epidemic there had been since jet airplanes increased the tempo and pressures of passenger aviation. Probably not. Airlines worked hard to keep the whole subject under wraps, fearing that if the facts became known, their contingent of non-paying riders would be greater still. But there were people who realized how simple it all could be, including the little old lady from San Diego.

Her name was Mrs. Ada Quonsett. Tanya had checked this fact from a Social Security card, and Mrs. Quonsett would undoubtedly have reached New York undetected if she had not made one mistake. This was confiding her status to her

seat companion, who told a stewardess. The stewardess reported to the captain, who radioed ahead, and a ticket agent and security guard were waiting to remove the little old lady at Lincoln International. She had been brought to Tanya, part of whose job as passenger relations agent was to deal with such stowaways as the airline was lucky enough to catch.

Tanya smoothed her tight, trim uniform skirt in the gesture which had become a habit. "All right," she said, "I think you'd better tell me about it."

The older woman's hands unfolded and the lace handkerchief changed position slightly. "Well, you see, I'm a widow and I have a married daughter in New York. Sometimes I get lonely and want to visit her. So what I do is go to Los Angeles and get on an airplane that's going to New York."

"Just like that? Without a ticket."

Mrs. Quonsett seemed shocked. "Oh, my dear, I couldn't possibly afford a ticket. I just have Social Security and this small pension my late husband left. It's all I can do to manage the bus fare from San Diego to Los Angeles."

"You *do* pay on the bus?"

"Oh, yes. The Greyhound people are very strict. I once tried buying a ticket to the first stop up the line, then staying on. But they make a check at every city, and the driver found my ticket wasn't good. They were quite unpleasant about it. Not like the airlines at all."

"I'm curious," Tanya said, "why you don't use San Diego airport."

"Well, I'm afraid, my dear, they know me there."

"You mean you've been caught at San Diego?"

The little old lady inclined her head. "Yes."

"Have you been a stowaway on other airlines? Besides ours?"

"Oh, yes. But I like Trans America best."

Tanya was trying hard to remain severe, though it was difficult when the conversation sounded as if they were discussing a stroll to the corner store. But she kept her face impassive as she asked, "Why do you like Trans America, Mrs. Quonsett?"

"Well, they're always so reasonable in New York. When I've stayed with my daughter a week or two, and I'm ready to go home, I go to your airline offices and tell them."

"You tell them the truth? That you came to New York as

"That's right, my dear. They ask me the date and the flight number—I always write it down so I'll remember. Then they look up some papers."

"The flight manifest," Tanya said. She wondered: was this conversation real or just imagination.

"Yes, dear, I think that's what it's called."

"Please go on."

The little old lady looked surprised. "There isn't anything else. After that, they just send me home. Usually the same day, on one of your airplanes."

"And that's everything? Nothing else is said?"

Mrs. Quonsett gave a gentle smile, as she might have done at a vicarage afternoon tea. "Well, I do sometimes get a little scolding. I'm told I've been naughty, and not to do it again. But that really isn't much, is it?"

"No," Tanya said. "It certainly isn't."

The incredible thing, Tanya realized, was that it was all so obviously true. As airlines were aware, it happened frequently. A would-be stowaway merely boarded an airplane—there were plenty of ways it could be done—and sat quietly, waiting for departure. As long as the stowaway stayed away from the first class compartment, where passengers could be identified easily, and unless the flight was full, detection was unlikely. It was true that stewardesses would count heads, and their tally might disagree with the gate agent's manifest. At that point a stowaway would be suspected, but the agent in charge would be faced with two choices. Either he could let the airplane go, recording on the manifest that the head and ticket counts did not agree, or a recheck could be made of the tickets of everyone aboard.

A recheck, if decided on, would take most of half an hour; meanwhile, the cost of holding a six-million-dollar jet airplane on the ground would soar. Schedules, both at origin and down the line, would be disrupted. Passengers with connections to make, or appointments, would grow angrily impatient, while the captain, conscious of his punctuality record, would fume at the agent. The agent would reason that he might have made a mistake anyway; moreover, unless he could show good reason for a delay, he would get a roasting later on from his District Transportation Manager. In the end, even if a stowaway was found, the loss in dollars and goodwill would far exceed the cost of providing a free ride for a single individual.

So what happened was that the airline did the only sensible thing—it closed the doors, and sent the airplane on its way.

That was usually the end of it. Once in flight, stewardesses were too busy to do a ticket check, and passengers would certainly not submit to the delay and annoyance of one at journey's end. Therefore the stowaway walked off, unquestioned and unhindered.

What the little old lady had told Tanya about returning was just as accurate. Airlines took the view that stowaway incidents should not happen and, when they did, it was their own fault for failing to prevent them. On the same basis, airlines accepted responsibility for insuring that stowaways were returned to their point of origin and—since there was no other way to convey them—offenders went back in regular seats, getting normal service, including airline meals.

"You're nice, too," Mrs. Quonsett said. "I can always tell nice people when I meet them. But you're a lot younger than the others in the airline—those I get to meet, I mean."

"You mean the ones who deal with cheats and stowaways."

"That's right." The little old lady seemed unabashed. Her eyes moved appraisingly. "I should say you're twenty-eight."

Tanya said shortly, "Thirty-seven."

"Well, you have a young mature look. Perhaps it comes from being married."

"Come off it," Tanya said. "That isn't going to help you."

"But you are married."

"I was. I'm not now."

"Such a pity. You could have beautiful children. With red hair like your own."

Red hair, perhaps, but not with the beginnings of gray, Tanya thought—the gray she had noticed again this morning. As to children, she might have explained that she did have a child, who was at home in their apartment and, she hoped, asleep. Instead, she addressed Mrs. Ada Quonsett sternly.

"What you've done is dishonest. You've defrauded; you've broken the law. I suppose you realize you can be prosecuted."

For the first time, a gleam of triumph crossed the older woman's innocent face. "But I won't be, will I? They never do prosecute anybody."

There was really no point in continuing, Tanya thought. She knew perfectly well, and so apparently did Mrs. Quonsett, that airlines never prosecuted stowaways, on the theory that publicity would be more harmful than other

There was just a chance, though, that some more questions might produce information useful in the future.

"Mrs. Quonsett," Tanya said, "since you've had so much free travel from Trans America, the least you can do is help us a little."

"I'll be glad to if I can."

"What I'd like to know is how you get aboard our flights."

The little old lady smiled. "Well, my dear, there are quite a few ways. I try to use different ones as much as I can."

"Please tell me about them."

"Well, most times I try to be at the airport early enough so I can get myself a boarding pass."

"Isn't that difficult to do?"

"Getting a boarding pass? Oh, no; it's very easy. Nowadays airlines use their ticket folders as passes. So I go to one of the counters and say I've lost my ticket folder, and please may I have another. I pick a counter where the clerks are busy, with a lot of people waiting. They always give me one."

Naturally they would, Tanya thought. It was a normal request which occurred frequently. Except that, unlike Mrs. Quonsett, most people wanted a fresh ticket folder for a legitimate reason.

"But it's just a blank folder," Tanya pointed out. "It isn't made out as a gate pass."

"I make it out myself—in the ladies' room. I always have some old passes with me, so I know what to write. And I keep a big black pencil in my purse." Depositing the lace handkerchief in her lap, Mrs. Quonsett opened her black beaded purse. "See?"

"I do see," Tanya said. She reached out, removing the crayon pencil. "Do you mind if I keep this?"

Mrs. Quonsett looked faintly resentful. "It's really mine. But if you want it, I suppose I can get another."

"Go on," Tanya said. "So now you have a boarding pass. What happens after that?"

"I go to where the flight is leaving from."

"The departure gate?"

"That's right. I wait until the young man checking the tickets is busy—he always is when a lot of people come together. Then I walk past him, and on to the airplane."

"Suppose someone tries to stop you?"

"No one does, if I have a pass."

"Not even the stewardesses?"

"They're just young girls, my dear. Usually they're talking to each other, or interested in the men. All they look at is the flight number, and I always get that right."

"But you said you don't always use a boarding pass."

Mrs. Quonsett blushed. "Then, I'm afraid, I have to tell a little white lie. Sometimes I say I'm going aboard to see my daughter off—most airlines let people do that, you know. Or, if the plane has come in from somewhere else, I say I'm going back to my seat, but I left my ticket on board. Or, I tell them my son just got on, but he dropped his wallet and want to give it to him. I carry a wallet in my hand, and that works best of all."

"Yes," Tanya said, "I imagine it would. You seem to have thought everything out very carefully." She had plenty of material, she mused, for a bulletin to all gate agents and stewardesses. She doubted, though, if it would have much effect.

"My late husband taught me to be thorough. He was a teacher—of geometry. He always said you should try to think of every angle."

Tanya looked hard at Mrs. Quonsett. Was her leg being gently pulled?

The face of the little old lady from San Diego remained impassive. "There's one important thing I haven't mentioned."

On the opposite side of the room a telephone rang. Tanya got up to answer it.

"Is that old biddy still with you?" The voice was the District Transportation Manager's. The D.T.M. was responsible for all phases of Trans America operations at Lincoln International. Usually a calm, good-natured boss, tonight he sounded irascible. Clearly, three days and nights of flight delays, rerouting unhappy passengers, and endless needlings from the airline's Eastern head office were having their effect.

"Yes," Tanya said.

"Get anything useful out of her?"

"Quite a lot. I'll send you a report."

"When you do, use some goddam capitals for once, so I can read it."

"Yes, sir."

She made the "sir" sufficiently pointed, so there was a momentary silence at the other end. Then the D.T.M. grunted. "Sorry, Tanva! I guess I'm passing on to you what

I've been getting from New York. Like the cabin boy kicking the ship's cat, only you're no cat. Can I do anything?"

"I'd like a one-way passage to Los Angeles, tonight, for Mrs. Ada Quonsett."

"Is that the old hen?"

"The same."

The D.T.M. said sourly, "I suppose, a company charge."

"I'm afraid so."

"What I hate about it is putting her ahead of honest-to-goodness fare-paying passengers who've been waiting hours already. But I guess you're right; we're better off to get her out of our hair."

"I think so."

"I'll okay a requisition. You can pick it up at the ticket counter. But be sure to alert Los Angeles, so they can have the airport police escort the old hag off the premises."

Tanya said softly, "She could be Whistler's Mother."

The D.T.M. grunted. "Then let Whistler buy her a ticket."

Tanya smiled and hung up. She returned to Mrs. Quonsett.

"You said there was an important thing—about getting aboard flights—that you hadn't told me."

The little old lady hesitated. Her mouth had tightened noticeably at the mention, during Tanya's conversation, of a return flight to Los Angeles.

"You've told me most of it," Tanya prompted. "You might as well finish. *If* there's anything else."

"There certainly is." Mrs. Quonsett gave a tight, prim nod. "I was going to say it's best not to choose the big flights—the important ones, I mean, that go non-stop across the country. They often get full, and they give people seat numbers, even in Economy. That makes it harder, though I did it once when I could see there weren't many others going."

"So you take flights that aren't direct. Don't you get found out at intermediate stops?"

"I pretend to be asleep. Usually they don't disturb me."

"But this time you were."

Mrs. Quonsett pressed her lips in a thin, reproving line. "It was that man sitting beside me. He was very mean. I confided in him, and he betrayed me to the stewardess. That's what you get for trusting people."

"Mrs. Quonsett," Tanya said. "I imagine you heard; we're going to send you back to Los Angeles."

There was the slightest gleam behind the elderly, gray eyes.

"Yes, my dear. I was afraid that would happen. But I'd like to get a cup of tea. So, if I can go now, and you'll tell me what time to come back . . ."

"Oh, no!" Tanya shook her head decisively. "You're not going anywhere alone. You can have your cup of tea, but an agent will be with you. I'm going to send for one now, and he'll stay with you until you board the Los Angeles flight. If I let you loose in this terminal I know exactly what would happen. You'd be on an airplane for New York before anybody knew it."

From the momentary hostile glare which Mrs. Quonsett gave her, Tanya knew she had guessed right.

Ten minutes later, all arrangements were complete. A single seat reservation had been made on Flight 103 for Los Angeles, leaving in an hour and a half. The flight was non-stop; there was to be no chance of Mrs. Quonsett getting off en route and heading back. D.T.M. Los Angeles had been advised by teletype; a memo was going to the crew of Flight 103.

The little old lady from San Diego had been handed over to a male Trans America agent—a recently recruited junior, young enough to be her grandson.

Tanya's instructions to the agent, Peter Coakley, were precise. "You're to stay with Mrs. Quonsett until flight time. She says she wants some tea, so take her to the coffee shop and she can have it; also something to eat if she asks, though there'll be dinner on the flight. But whatever she has, stay with her. If she needs the ladies' room, wait outside; otherwise, don't let her out of your sight. At flight time, take her to the departure gate, go aboard with her and hand her over to the senior stewardess. Make it clear that once aboard, she is not to be allowed off the airplane for any reason. She's full of little tricks and plausible excuses, so be careful."

Before leaving, the little old lady grasped the young agent's arm. "I hope you don't mind, young man. Nowadays an old lady needs support, and you do so remind me of my dear son-in-law. He was good-looking, too, though of course he's a lot older than you are now. Your airline does seem to employ nice people." Mrs. Quonsett glanced reproachfully at Tanya. "At least, most of them are."

"Remember what I said," Tanya cautioned Peter Coakley. "She's got a barrelful of tricks."

Mrs. Quonsett said severely, "That isn't very kind. I'm sure this young man will form his own opinion."

The agent was grinning sheepishly.

At the doorway, Mrs. Quonsett turned. She addressed Tanya. "Despite the way you've behaved, my dear, I want you to know that I don't bear any grudge."

A few minutes later, from the small lounge which she had used for tonight's two interviews, Tanya returned to the Trans America executive offices on the main mezzanine. The time, she noticed, was a quarter to nine. At her desk in the big outer office she speculated on whether the airline had heard the last, or not, of Mrs. Ada Quonsett. Tanya rather doubted it. On her capital-less typewriter she began a memo to the District Transportation Manager.

to: dtm

from: tanya liv'stn

subject: whistler's mum

She stopped, wondering where Mel Bakersfeld was, and if he would come.

5

He simply couldn't, Mel Bakersfeld decided, go downtown tonight.

Mel was in his office, in the mezzanine administrative suite. His fingers drummed thoughtfully on the surface of his desk, from where he had been telephoning, obtaining latest reports on the airport's operating status.

Runway three zero was still out of use, still blocked by the mired Aéreo-Mexican jet. As a result, the general runway availability situation was now critical, and traffic delays—both in the air and on the ground—were worsening. The possibility of having to declare the airport closed, some time within the next few hours, was very real.

Meanwhile, aircraft takeoffs were continuing over Meadowood, which was a hornet's nest all its own. The airport switchboard, as well as air traffic control's, was being swamped with bitterly complaining calls from Meadowood

householders—those who were at home. A good many others, Mel had been informed, were at the protest meeting he had heard about earlier this evening; and now there was a rumor—which the tower chief had passed along a few minutes ago—that some kind of public demonstration was being planned, to take place at the airport tonight.

Mel thought glumly: a bunch of demonstrators underfoot was all he needed.

One good thing was that the category three emergency had just been declared concluded, the air force KC-135 which caused it, having landed safely. But one emergency ended was no assurance another would not begin. Mel had not forgotten the vague unease, the presentiment of danger he had felt while on the airfield an hour ago. The feeling, impossible to define or justify, still bothered him. Yet even without it, the other circumstances were enough to require his remaining here.

Cindy, of course—still waiting for him at her charity whingding—would raise all hell. But she was angry, anyway, because he was going to be late; he would have to brace himself to absorb the extra wrath as a result of not appearing at all. He supposed he might as well get Cindy's first salvo over with. The slip of paper with the downtown number where he had reached his wife earlier was still in his pocket. He took it out, and dialed.

As before, it took several minutes for Cindy to come to the telephone, and when she did, surprisingly, there was none of the fire she had shown during their previous conversation—only an icy chill. She listened in silence to Mel's explanation—why it was essential he should remain at the airport. Because of the lack of argument, which he had not expected, he found himself floundering, with labored excuses not wholly convincing to himself. He stopped abruptly.

There was a pause before Cindy inquired coldly, "Have you finished?"

"Yes."

She sounded as if she were talking to someone distasteful and remote. "I'm not surprised, because I didn't expect you to come. When you said you would, I assumed as usual you were lying."

Mel stopped. What was the use? He conceded wearily, "Go on."

"As I was trying to say when you interrupted—also as usual . . ."

"Cindy, for God's sake!"

" . . . knowing you were lying, gave me the chance to do some thinking." She paused. "You say you're staying at the airport."

"Considering that's what this conversation is all about . . ."

"How long?"

"Until midnight; perhaps all night."

"Then I'll come out there. You can expect me."

"Listen, Cindy, it's no good. This isn't the time or place."

"Then we'll make it the time. And for what I have to say to you, any place is good enough."

"Cindy, please be reasonable. I agree there are things we have to discuss, but not . . ."

Mel stopped, realizing he was talking to himself. Cindy had hung up.

He replaced his own phone and sat in the silent office, meditatively. Then, not quite knowing why, he picked up the telephone again and, for the second time tonight, dialed home. Earlier, Roberta had answered. This time it was Mrs. Sebastiani, their regular babysitter.

"I was just calling to check," Mel said. "Is everything all right? Are the girls in bed?"

"Roberta is, Mr. Bakersfeld. Libby's just going."

"May I speak to Libby?"

"Well . . . just for a moment, if you promise to be very quick."

"I promise."

Mrs. Sebastiani, Mel perceived, was her usual didactic self. When on duty she exacted obedience, not just from children, but from entire families. He sometimes wondered if the Sebastianis—there was a mousy husband who appeared occasionally—ever had emotional marriage problems. He suspected not. Mrs. Sebastiani would never permit it.

He heard the patter of Libby's feet approach the phone.

"Daddy," Libby said, "does our blood keep going round inside forever and ever?"

Libby's questions were always intriguingly different. She opened new subjects as if they were presents under a Christmas tree.

"Not forever, dear; nothing's forever. Just so long as you live. Your blood has been going around for seven years, ever since your heart started pumping."

"I can feel my heart," Libby said. "In my knee."

He was on the point of explaining that hearts were not in knees, and about pulses and arteries and veins, then changed his mind. There was plenty of time for all that. As long as you could feel your heart—wherever it seemed to be—that was the important thing. Libby had an instinct for essentials; at times he had the impression that her little hands reached up and gathered stars of truth.

"Goodnight, Daddy."

"Goodnight, my love."

Mel was still not sure why he had called, but he felt better for having done so.

As to Cindy, when she determined to do something she usually did it, so it was entirely likely that she would arrive at the airport later tonight. And perhaps she was right. There were fundamental things they had to settle, notably whether their hollow shell of a marriage was to continue for the children's sake, or not. At least they would have privacy here, out of hearing of Roberta and Libby, who had overheard too many of their fights before.

At the moment there was nothing specific for Mel to do, except be available. He went out from his office onto the executive mezzanine, looking down on the continued bustling activity of the main terminal concourse.

It would not be many years, Mel reflected, before airport concourses changed dramatically. Something would have to be done soon to revise the present inefficient way in which people boarded airplanes and got off them. Simply walking on and off, individually, was far too cumbersome and slow. As each year passed, individual airplanes cost more and more millions of dollars; at the same time, the cost of letting them stay idle on the ground grew greater. Aircraft designers, airline planners, were striving to arrange more flying hours, which produced revenue, and fewer ground hours, which produced none at all.

Already plans were afoot for "people-pods"—based on American Airline-type "igloos" now used for pre-loading air freight. Most other airlines had their own variants of the igloo system.

fit tightly in a jet plane fuselage. Each igloo was pre-loaded with freight of assorted shapes and sizes, and could be lifted to fuselage level, and stowed inside a jet, in minutes. Unlike conventional passenger planes, the inside of a jet freighter was usually a hollow shell. Nowadays when an all-cargo plane arrived at an airport freight terminal, igloos already in the airplane were off-loaded, and new ones put in. With a minimum of time and labor, an entire jet could be swiftly reloaded, reloaded, and be ready again for takeoff.

"People-pods" would be an adaptation of the same idea and Mel had seen drawings of the type now contemplated. They would comprise small, comfortable cabin sections complete with seats, which passengers would step into at an airport check-in point. The pods would then be whisked along conveyor lines—similar to present baggage conveyor systems—to ramp positions. While their occupants remained seated, the people-pods would be slid into an aircraft which might have arrived only a few minutes earlier, but had already discharged other people-pods containing incoming passengers.

When the pods were loaded and in place, windows in them would correspond with windows in the aircraft fuselage. Doors at the end of each pod would fold back so that stewards and passengers could pass through to other sections. Galley compartments, complete with fresh food and fresh stewardsesses, would be inserted as separate pods.

A refinement of the system might eventually allow boarding of people-pods downtown, or permit interline transfers of passengers without ever leaving their seats.

A related concept was a "sky lounge" already under development in Los Angeles. Each lounge, holding forty passengers, would be part-bus, part-helicopter. On local routes it could travel suburban or downtown streets under its own power, then, at a local heliport become a pod beneath an outsize helicopter—the entire unit whisked to and from the airport.

And these things would happen, Mel Bakersfeld reflected. Or if not those precisely, then something similar, and so on. A fascination, for those who worked in the aviation industry, was the speed with which fantastic dreams came true.

A shout, abruptly, from the concourse below, broke into his thoughts.

"Hey, Bakersfeld! Hey up there!"

Mel searched with his eyes, seeking the source of the voice.

beating it was made more difficult by the fact that fifty or more faces, their owners curious about who was being called, had simultaneously swung up. A moment later he identified the caller. It was Egan Jeffers, a tall, lean Negro in light tan slacks and a short-sleeved shirt. One sinewy brown arm gestured urgently.

"You get down here, Bakersfeld. You hear me! You got troubles!"

Mel smiled. Jeffers, who held the terminal shoeshine concession, was an airport character. With a challenging, broad grin across his homely features, he could make the most outrageous statements and somehow get away with it.

"I hear you, Egan Jeffers. How about you coming up instead?"

The grin widened. "Nuts to that, Bakersfeld! I'm a lessee and don't forget it."

"If I do, I suppose you'll read me the Civil Rights Act."

"You said it, Bakersfeld. Now haul your ass down here."

"And you watch your language in my airport." Still amused, Mel turned away from the mezzanine rail and headed for the staff elevator. At the main concourse level, Egan Jeffers was waiting.

Jeffers operated four shoeshine parlors within the terminal. As concessions went, it was not a major one, and the airport's parking, restaurant, and newsstand concessions produced revenues which were astronomical by comparison. But Egan Jeffers, a one-time curbside bootblack, blithely behaved as if he alone kept the airport solvent.

"We gotta contract, me and this airport. Check?"

"Check."

"Down in all that fancy rig-y-marole it says I got the exclusive right to shine shoes in these here premises. *Ex-clu-sive*. Check?"

"Check."

"Like I said, man, you got trouble. Follow me, Bakersfeld."

They crossed the main concourse to a lower level escalator which Jeffers descended in long strides, two steps at a time. He waved genially to several people as they passed. Less athletically, favoring his weaker foot, Mel followed.

At the foot of the escalator, near the group of car-rental booths occupied by Hertz, Avis, and Budget, Jeffers

polish outa the mouths of me and the boys who work for me."

Mel inspected the cause of complaint. At the Avis counter a bold display card read:

A SHINE WHILE YOU SIGN

With Our Compliments

* * *

We're Trying Harder Still!

Beneath, at floor level, was a rotating electric shoe polisher, positioned so that anyone standing at the counter could do what the notice said.

Mel was half amused; the other half of his mind accepted Egan Jeffers' complaint. Half-kidding or not, Jeffers was within his rights. His contract spelled out that no one else at the airport could shine shoes, just as Jeffers himself could not rent cars or sell newspapers. Each concessionaire received the same kind of protection in return for the substantial portion of his profits which the airport appropriated for itself.

With Egan Jeffers watching, Mel crossed to the car-rental booth. He consulted his pocket panic list—a slim booklet containing private telephone numbers of senior airport personnel. The Avis manager was listed. The girl behind the counter switched on an automatic smile as he approached. Mel instructed her, "Let me use your phone."

She protested, "Sir, it's not a public . . ."

"I'm the airport manager." Mel reached across, picked up the telephone and dialed. Not being recognized in his own airport was a frequent experience. Most of Mel's work kept him behind scenes, away from public areas, so that those who worked there seldom saw him.

Listening to the ringing tone, he wished that other problems could be settled as swiftly and simply as this one was going to be.

It took a dozen rings, then several minutes more of waiting, before the Avis manager's voice came on the line. "Ken Kingsley here."

"I might have needed a car," Mel said. "Where were you?"

"Playing with my kid's trains. Takes my mind off automobiles—and people who call me about them."

"Must be great to have a boy," Mel said. "I just have girl Is your boy mechanically minded?"

"An eight-year-old genius. Any time you need him to run that toy airport of yours, let me know."

"Sure will, Ken." Mel winked at Egan Jeffers. "There one thing he might do now. He could set up a shoeshine machine at home. I happen to know where there's one surplus. So do you."

There was a silence, then the Avis manager sighed. "What is it you guys always want to stifle a little honest sales promotion?"

"Mostly because we're mean and ornery. But we can make it stick. Remember that contract clause?—any change in display space must have prior approval of airport management. Then there's the one about not infringing on other lessee business."

"I get it," Kingsley said. "Egan Jeffers has been beefing."

"Let's say he isn't cheering."

"Okay, you win. I'll tell my people to yank the damn thing. Is there any fat rush?"

"Not really," Mel said. "Any time in the next half hour will do."

"You bastard."

But he could hear the Avis man chuckling as he hung up. Egan Jeffers nodded approvingly, his wide grin still in place. Mel brooded: I'm the friendly airport fun man; I make everybody happy. He wished he could do the same thing for himself.

"You handled that A-OK, Bakersfeld," Jeffers said. "Just stay on the ball so it don't happen again." At a businesslike pace, still beaming, he headed for the "up" escalator.

Mel followed more slowly. On the main concourse level at the Trans America counters, a milling crowd was in front of two positions marked:

Special Check-in
Flight Two—*The Golden Argosy*
Rome Nonstop

Nearby, Tanya Livingston was talking animatedly with a group of passengers. She signaled Mel and, after a moment or two, came over to join him.

"I mustn't stop; it's like a madhouse here. I thought you were going downtown."

"My plans changed," Mel said. "For that matter, I thought you were going off duty."

"The D.T.M. asked if I'd stay. We're trying to get *The Golden Argosy* away on time. It's supposed to be for prestige, though I suspect the real reason is, Captain Demerest doesn't like to be kept waiting."

"You're letting prejudice carry you away." Mel grinned. "Though sometimes I do, too."

Tanya gestured down the concourse to a raised platform with a circular counter surrounding it, a few yards from where they were standing. "That's what your big fight with your brother-in-law was all about; why Captain Demerest is so mad at you. Isn't it?"

Tanya was pointing to the airport's insurance-vending booth. A dozen or more people were ranged around the circular counter, most of them completing application forms for air trip insurance. Behind the counter, two attractive girls, one a striking blonde with big breasts, were busy writing policies.

"Yes," Mel acknowledged, "that was most of our trouble—at least, recently. Vernon and the Air Line Pilots Association think we should abolish insurance booths at airports, and insurance policy vending machines. I don't. The two of us had a battle about it in front of the Board of Airport Commissioners. What Vernon didn't like, and still doesn't, is that I won."

"I heard." Tanya looked at Mel searchingly. "Some of us don't agree with you. This time we think Captain Demerest is right."

Mel shook his head. "Then we'll have to disagree. I've been over it all so many times; Vernon's arguments just don't make sense."

They hadn't made any more sense—in Mel's opinion—that day a month ago, at Lincoln International, when Vernon Demerest had appeared before an Airport Commissioners meeting. Vernon requested the hearing, and had represented the Air Line Pilots Association, which was waging a campaign to outlaw insurance vending at airports everywhere.

Mel remembered the details of the session clearly.

It was a regular Board of Airport Commissioners meeting, on a Wednesday morning in the airport board room. All five

commissioners were present: Mrs. Mildred Ackerman, an attractive brunette housewife who was rumored to be a mistress of the mayor, hence her appointment; and her four male colleagues—a university professor, who was Board chairman, two local businessmen, and a retired union official.

The Board room was a mahogany paneled chamber, in the terminal, on the executive mezzanine. At one end, on a raised platform, the commissioners sat in reclining leather chairs behind a handsome elliptical-shaped table. At a lower level was a second table, less elaborate. Here Mel Bakersfeld presided, flanked by his department heads. Alongside was a press table and, at the rear, a section for the public, since Board meetings were nominally open. The public section was rarely occupied.

Today the only outsider, apart from commissioners and staff, was Captain Vernon Demerest, smartly attired in Trans America uniform, his four gold stripes of rank bright under the overhead lights. He sat waiting in the public section, with books and papers spread over two other chairs beside him. Courteously, the Board elected to hear Captain Demerest first, ahead of its regular business.

Demerest rose. He addressed the Board with his usual self-assurance, and referred only occasionally to his notes. He was appearing, he explained, on behalf of the Air Line Pilots Association, of which he was a local council chairman. However, the views he would expound were equally his own, and were shared by most pilots of all airlines.

The commissioners settled back in their reclining chairs to listen.

Airport insurance vending, Demerest began, was a ridiculous, archaic hangover from flying's early days. The very presence of insurance booths and machines, their prominence in airport concourses, were insults to commercial aviation, which had a finer safety record, in relation to miles traveled, than any other form of transportation.

In a railway station or bus depot, or on boarding an ocean liner, or driving his own car from a parking garage, did a departing traveler have special insurance policies, against death and mutilation, thrust beneath his nose with subtle sales pressure? Of course not!

Then why aviation?

Demerest -

clared, was that insurance companies knew a rich bonanza when they saw it, "and never mind the consequences."

Commercial aviation was still sufficiently new so that many people thought of traveling by air as hazardous, despite the provable fact that an individual was safer in a commercial airliner than in his own home. This inherent mistrust of flying was magnified on the exceedingly rare occasions when an airline accident occurred. The impact was dramatic, and obscured the fact that far more deaths and injuries occurred in other, more accepted ways.

The truth about the safety of flying, Demerest pointed out, was attested by insurance companies themselves. Airline pilots, whose exposure to air travel was far greater than that of passengers, could buy standard life insurance at regular rates and, through their own group plans, at even lower rates than the general populace.

Yet other insurance companies, abetted by greedy airport managements, and with the docile acquiescence of airlines, continued to batten on the fears and gullibility of air travelers.

Listening, at the staff table, Mel conceded mentally that his brother-in-law was making a lucid presentation, though the reference to "greedy airport managements" had been unwise. The remark had produced frowns from several of the five commissioners, including Mrs. Ackerman.

Vernon Demerest seemed not to notice. "Now, madam and gentlemen, we come to the most significant, the vital point."

This, he declared, was the very real danger, to every air passenger and to all flying crews, created by irresponsible, casual sales of insurance policies at airport counters, and by vending machines . . . "policies promising vast sums, fortunes, in return for a mere few dollars' premium."

Demerest continued heatedly: "The system—if you choose to dignify a public disservice by calling it a system . . . and most pilots don't—offers a gilt-edged, open invitation to maniacs and criminals to engage in sabotage and mass murder. Their objectives need be only the simplest: personal reward for themselves or their expected beneficiaries."

"Captain!" The woman commissioner, Mrs. Ackerman, was leaning forward in her chair. From her voice and expression, Mel guessed she was doing a slow burn about the "greedy airport managements" remark. "Captain, we're hearing a

whole lot of your opinions. Do you have any facts to back up all this?"

"Indeed I do, madam. There are many facts."

Vernon Demerest had prepared his case thoroughly. Using charts and graphs, he demonstrated that known in-flight disasters caused by bombings or other acts of violence averaged one and one half per year. Motives varied, but a consistent, prevalent cause was financial gain from flight insurance. As well, there had been additional bombing attempts which either failed or were prevented, and other disasters where sabotage was suspected but not proved.

He named classic incidents: Canadian Pacific Airlines, 1949 and 1965; Western Airlines, 1957; National Airlines, 1960 and a suspected sabotage in 1959; two Mexican airlines, 1952 and 1953; Venezuelan Airlines, 1960; Continental Airlines, 1962; Pacific Air Lines, 1964; United Air Lines, 1950, 1955, and a suspected sabotage in 1965. In nine of the thirteen incidents, all passengers and crew members perished.

It was true, of course, that where sabotage was exposed, any insurance policies which had been taken out by those involved were automatically invalidated. In short: sabotage didn't pay, and normal, informed people were aware of this. They also knew that even after an air disaster from which there were no survivors, providing wreckage was located, it was possible to tell whether an explosion had occurred and, usually, by what means.

But it was not normal people, Demerest reminded the commissioners, who committed bombings or savage acts of violence. It was the abnormal, the psychopaths, the criminally insane, the conscienceless mass killers. That kind of people were seldom well-informed, and even if they were, the psychopathic mind had a way of perceiving only what it wanted to, of bending facts to suit what it was convenient to believe.

Mrs. Ackerman made an interjection again; this time her hostility to Demerest was unmistakable. "I'm not sure any of us, even you, Captain, have qualifications to discuss what goes on in the mind of psychopaths."

"I wasn't discussing it," Demerest said impatiently. "In any case, that isn't the point."

"Pardon me, you were discussing it. And I happen to think it is the point."

Vernon Demerest flushed. He was accustomed to com-

the surface, flashed. "Madam, are you normally stupid or just being deliberately obtuse?"

The Board chairman rapped sharply with his gavel, and Mel Bakersfeld resisted the urge to laugh.

Well, Mel thought, we might as well finish right now. Vernon should stick to flying, which he was good at, and avoid diplomacy, where he had just struck out. The chances of the Airport Board doing anything which Captain Demerest wanted were, at this moment, minus nil—at least unless Mel helped Demerest out. For a moment he wondered if he should. He suspected Demerest realized he had gone too far. However, there was still time to turn what had just happened into a joke which everyone could laugh at, including Mildred Ackerman. Mel had a knack for doing that kind of thing, for making differences amenable, at the same time saving face for those on both sides. Also, he knew he was a favorite of Millie Ackerman's; they got on well together, and she always listened attentively to anything Mel might say.

Then he decided: the hell with it. He doubted if his brother-in-law would do the same thing if their situations were reversed. Let Vernon get out of the mess himself. In any case, Mel was going to have his own say in a few minutes' time.

"Captain Demerest," the Board chairman observed coldly, "that last remark is uncalled for, out of order, and you will please withdraw it."

Demerest's features were still flushed. He hesitated, then nodded. "Very well, I have just glanced at Mrs. Ackerman. I beg the lady she can understand that this is a subject which commercial flying crews, feel strongly about something which seems to me so obvious that my sentence is incomplete."

Mrs. Ackerman was glaring. The apology Mel thought, had been handled badly. No use smoothing things over, even if he wanted to.

One of the other commissioners asked, "exactly do you want from us?"

Demerest took a pace forward. His voice was firm. "I'm appealing to you for abolition of Chinese and over-the-counter insurance vending machines, and a promise that you will refuse to do so again, for the same purpose."

"You'd abolish insurance sales entirely?"

"At airports—yes. I may say, madam and gentlemen, that the Air Line Pilots Association is urging other airports to do the same thing. We're also asking Congress to take action to make airport insurance sales illegal."

"What would be the point of doing that in the United States, when air travel is international?"

Demerest smiled faintly. "This campaign is international, too."

"How international?"

"We have the active support of pilots' groups in forty-eight other countries. Most believe that if an example were set in North America, either by the U.S. or Canada, others would follow."

The same commissioner said skeptically, "I'd say you're all expecting quite a lot."

"Surely," the chairman interjected, "the public is entitled to buy air travel insurance if they want it."

Demerest nodded agreement. "Of course. No one is saying they can't."

"Yes, you are." It was Mrs. Ackerman again.

chance of the psychotic, the maniac, the unbalanced individual being noticed, his intentions questioned.

"Another thing to remember—an insane or unbalanced person is a creature of impulse. Where flight insurance is concerned, this impulse is catered to by the quickie, no-questions-asked policies available from airport vending machines and at insurance counters."

"I think we all get the point you're making," the chairman said sharply. "You're beginning to repeat yourself, Captain."

Mrs. Ackerman nodded. "I agree. Personally, I'd like to hear what Mr. Bakersfeld has to say."

The eyes of the commissioners swung toward Mel. He acknowledged, "Yes, I do have some observations. But I'd prefer to wait until Captain Demerest is completely finished."

"He's finished," Mildred Ackerman said. "We just decided."

One of the other commissioners laughed, and the chairman rapped with his gavel. "Yes, I really think so . . . If you please, Mr. Bakersfeld."

As Mel rose, Vernon Demerest returned, glowering, to his seat.

"I may as well make it clear," Mel began, "that I take the opposite point of view to just about everything Vernon has said. I guess you could call it a family disagreement."

The commissioners, who were aware of Mel's relationship by marriage to Vernon Demerest, smiled, and already, Mel sensed, the tension of a few minutes earlier had lessened. He was used to these meetings and knew that informality was always the best approach. Vernon could have found that out, too—if he had taken the trouble to inquire.

"There are several points we ought to think about," Mel continued. "First, let's face up to the fact that most people have always had an inherent fear of flying, and I'm convinced that feeling will always exist, no matter how much progress we make, and however much we improve our safety record. Incidentally, the one point on which I agree with Vernon is that our safety record is exceedingly good already."

He went on: Because of this inherent fear, many passengers felt more comfortable, more reassured, with air trip insurance. They wanted it. They also wanted it to be obtainable at airports, a fact proven by the enormous volume of sales from vending machines and airport insurance booths. It was a matter of freedom that passengers should have the

right, and the opportunity, to buy insurance or not. As for getting the insurance ahead of time, the plain fact was that most people didn't think of it. Besides, Mel added, if flight insurance were sold this way, a great deal of revenue to airports—including Lincoln International—would be lost. At the mention of airport revenue, Mel smiled. The airport commissioners smiled with him.

That was the crux of it, of course, Mel realized. Revenue from the insurance concessions was too important to lose. At Lincoln International, the airport gained half a million dollars annually from commissions on insurance sales, though few purchasers realized that the airport appropriated twenty-five cents from every premium dollar. Yet insurance represented the fourth largest concession, with only parking, restaurants, and auto rentals producing larger sums for the airport's coffers. At other big airports, insurance revenue was similar or higher. It was all very well, Mel reflected, for Vernon Demerest to talk about "greedy airport managements," but that kind of money had a way of talking, too.

Mel decided not to put his thoughts into speech. His single brief reference to revenue was enough. The commissioners, who were familiar with the airport's financial affairs, would get the point.

He consulted his notes. They were notes which one of the insurance companies doing business at Lincoln International had supplied him with yesterday. Mel had not asked for the notes, nor had he mentioned to anyone outside his own office that today's insurance debate was coming up. But the insurance people had somehow learned, and it was extraordinary how they always did—then acted promptly to protect their interests.

Mel would not have used the notes if they had run counter to his own honestly held opinions. Fortunately, they did not.

"Now," Mel said, "about sabotage—potential and otherwise." He was aware of the board members listening intently.

"Vernon has talked quite a lot about that—but I must say, having listened carefully, that most of his remarks seemed to me to be overstatements. Actually, the proven incidents of air disasters because of insurance-inspired bombings have been very few."

In the spectator section, Captain Demerest shot to his feet. "Great God!—how many disasters do we need to have!"

The chairman rapped sharply with his gavel. "Captain . . . if you please!"

Mel waited until Demerest subsided, then continued calmly. "Since the question has been asked, the answer is 'none.' The more pertinent question is: Might not the disasters still have occurred, even if airport-purchased insurance had not been available?"

Mel paused, to let his point sink home, before continuing.

"It can be argued, of course, that if airport insurance had not been available, the disasters we are talking about might never have happened at all. In other words, these were crimes of impulse, triggered by the ease with which airport insurance can be bought. Similarly, it can be contended that even if the crimes were contemplated in advance, they might not have been carried through had flight insurance been less readily available. Those, I think, are Vernon's arguments—and the ALPA's."

Mel glanced briefly at his brother-in-law who gave no sign beyond a scowl.

"The glaring weakness of all those arguments," Mel maintained, "is that they are purely suppositional. It seems to me just as likely that someone planning such a crime would not be deterred by the absence of airport insurance, but would merely obtain their insurance elsewhere, which—as Vernon himself pointed out—is a simple thing to do."

Expressed another way, Mel pointed out, flight insurance appeared only a secondary motive of would-be saboteurs, and not a prime reason for their crime. The real motives, whether aerial sabotage occurred, were based on age-old human weaknesses—love triangles, greed, business failures, suicide.

As long as there had been human beings, Mel argued, it had proven impossible to eliminate these motives. Therefore those concerned with aviation safety and sabotage prevention should seek, not to abolish airport flight insurance, but to strengthen other precautionary measures in the air and on the ground. One such measure was stricter control of the sale of dynamite—the principal tool used by most aerial saboteurs to date. Another proposal was development of "sniffer" devices to detect explosives in baggage. One such device, Mel informed the attentive Airport Commissioners, was already in experimental use.

A third idea—urged by flight insurance companies—was that passengers' baggage be opened for examination before

Bakersfeld and Vernon Demerest had never liked each other, despite Demerest's marriage to Mel's sister, Sarah, and both men knew it; also, of late, the dislike had sharpened to open antagonism.

"You're damn right there are hard feelings," Demerest said. The peak of his anger had passed, but his eyes were hard.

The commissioners, now filing out from the Board room, looked curiously at them both. The commissioners were on their way to lunch. In a few minutes Mel would join them.

Demerest said contemptuously, "It's easy for people like you—ground-bound, desk-tied, with penguins' minds. If you were in the air as often as I am, you'd have a different point of view."

Mel said sharply, "I wasn't always flying a desk."

"Oh, for Christ's sake! Don't hand me that hero veteran crap. You're at zero-feet now; the way you think shows it. If you weren't, you'd see this insurance deal the way any self-respecting pilot does."

"You're sure you mean self-respecting, not self-adoring?" If Vernon wanted a slanging match, Mel decided, he could have one. There was no one else within hearing now. "The trouble with most of you pilots is you've become so used to thinking of yourselves as demigods and captains of the clouds, you've convinced yourselves your brains are something wonderful too. Well, except in a few specialized ways, they're not. Sometimes I think the rest of what you have has added through sitting up in that rarefied air too long while automatic pilots do the work. So when someone comes up with an honest opinion which happens to run counter to your own, you behave like spoiled little children."

"I'll let all that stuff go," Demerest said, "though if anybody's childish it's you right now. What's more to the point is that you're dishonest."

"Now look, Vernon . . ."

"An honest opinion, you said," Demerest snorted in disgust. "Honest opinion, my eye! In there, you were using an insurance company poop sheet. You were reading from it! I could see from where I was sitting, and I know because I have a copy myself." He touched the pile of books and papers he was carrying. "You didn't even have the decency, or take the trouble, to prepare a case yourself."

Mel flushed. His brother-in-law had caught him out. He

ould have prepared his own case, or at least adapted the insurance company's notes and had them retyped. It was true; had been busier than usual for several days before the meeting, but that was no excuse.

"Some day you may regret this," Vernon Demerest said. If you do, and I'm around, I'll be the one to remind you of today. Until then, I can do without seeing you any more than I have to."

Before Mel could reply, his brother-in-law had turned and gone.

Remembering, now, with Tanya beside him in the main terminal concourse, Mel wondered—as he had several times since—if he could not have handled the clash with Vernon a good deal better. He had an uneasy feeling that he had behaved badly. He could still have differed with his brother-in-law; even now Mel saw no reason to change his point of view. But he could have done it more good-naturedly, avoiding the tactlessness which was a part of Vernon Demerest's makeup, but not of Mel's.

There had been no confrontation, since that day, between the two of them; the near-encounter with Demerest in the airport coffee shop tonight had been Mel's first sight of his brother-in-law since the airport commissioners' meeting. Mel had never been close to his older sister, Sarah, and they seldom visited each other's homes. Yet sooner or later, Mel and Vernon Demerest would have to meet, if not to resolve their differences, at least to shelve them. And, Mel thought, judging by the strongly worded snow committee report—unquestionably inspired by Vernon's antagonism—the sooner it happened, the better.

to flame. Suddenly, he wanted their closeness to become closer still.

"You didn't send me far away," Mel answered. "You brought me nearer. At this moment I want you very much." As their eyes met directly, he added, "In every way."

Tanya was characteristically frank. "I want you too." She smiled slightly. "I have for a long time."

His impulse was to suggest that they both leave now, and find some quiet place together . . . Tanya's apartment perhaps . . . and hang the consequences! Then Mel accepted what he already knew; he couldn't go. Not yet.

"We'll meet later," he told her. "Tonight. I'm not sure how much later, but we will. Don't go home without me." He wanted to reach out, and seize and hold her, and press her body to his, but the traffic of the concourse was all around them.

She reached out, her fingertips resting lightly on his hand. The sense of contact was electric. "I'll wait," Tanya said. "I'll wait as long as you want."

A moment later she moved away, and was instantly swallowed up in the press of passengers around the Trans-America counters.

6

Despite her forcefulness when she had talked with Mel a half-hour earlier, Cindy Bakersfeld was uncertain what to do next. She wished there were someone she could trust to advise her. Should she go to the airport tonight, or not?

Alone and lonely, with the cocktail party babel of the Friends of the Archidona Children's Relief Fund around her, Cindy brooded uneasily over the two courses of action she could take. Through most of the evening, until now, she had moved from group to group, chatting animatedly, meeting people she knew, or wanted to. But for some reason tonight—rather more than usual—Cindy was aware of being here unaccompanied. For the past few minutes she had been standing thoughtfully, preoccupied, by herself.

She reasoned again: She didn't feel like going unescorted into dinner, which would begin soon. So on the one hand

could go home; on the other, she could seek out Mel and face a fight.

On the telephone with Mel she had insisted she would go to the airport and confront him. But if she went, Cindy realized, it would mean a showdown—almost certainly irreversible and final—between them both. Commonsense told her that sooner or later the showdown must come, so better have it now and done with; and there were other related matters which had to be resolved. Yet fifteen years of marriage were not to be shrugged off lightly like a disposable plastic raincoat. No matter how many deficiencies and disagreements there were—and Cindy could think of plenty—when two people lived together that long, there were connecting strands between them which it would be painful to sever.

Even now, Cindy believed, their marriage could be salvaged if both of them tried hard enough. The point was: Did they want to? Cindy was convinced she did—if Mel would meet some of her conditions, though in the past he had refused to, and she doubted very much if he would ever change as much as she would like. Yet without some changes, continuing to live together as they were would be intolerable. Lately there had not even been the consolation of sex which once upon a time made up for other inadequacies. Something had gone wrong there too, though Cindy was not sure what. Mel still excited her sexually; even now, just thinking about him in that way was enough to arouse her, and at this moment she was conscious of her body stirring. But somehow, when the opportunity was there, their mental separation inhibited them both. The result—at least in Cindy—was frustration, anger, and later a sexual appetite so strong that she had to have a man. Any man.

She was still standing alone, in the plush La Salle Salon of the Lake Michigan Inn, where tonight's reception for the press was being held. The buzz of conversation around her was mostly about the storm and the difficulty everyone had had in getting here; but at least—unlike Mel, Cindy thought—they had made it. Occasionally there was a mention of Archidona, reminding Cindy that she still hadn't found out where Archidona—Ecuador or Spain . . . *damn you Mr. Sauerfeld!* Okay, so I'm not as smart as you are—her mind was directed at.

An arm brushed against hers and a voice said amiably, "No drink, Mrs. Bakersfeld? Can I get you one?"

Cindy turned. The questioner was a newspaperman named Derek Eden, whom she knew slightly. His by-line appeared in the *Sun-Times* frequently. Like many of his kind, he had an easy, confident manner and air of mild dissipation. She was aware that each of them had taken note of the other on previous occasions.

"All right," Cindy said. "A Bourbon and water, go lightly on the water. And please use my first name; I think you know it."

"Sure thing, Cindy." The newspaperman's eyes were admiring and frankly appraising. Well, Cindy thought, why not? She knew she looked good tonight; she had dressed well and made up carefully.

"I'll be back," Derek Eden assured her, "so don't go away now I've found you." He headed purposefully for the bar.

Waiting, surveying the crowded La Salle Salon, Cindy caught the glance of an older woman in a flowered hat. At once Cindy smiled warmly and the woman nodded, but her eyes moved on. She was a society page columnist. A photographer was beside her and together they were planning pictures for what would probably be a full-page layout in tomorrow's paper. The woman in the flowered hat motioned several of the charity workers and their guests together, and they crowded in, smiling obligingly, trying to look casual, but pleased that they had been selected. Cindy knew why she had been passed over; alone she was not important enough, though she would have been if Mel were there. In the city's life, Mel rated. The galling thing was—socially, Mel didn't care.

Across the room the photographer's light gun flashed; the woman in the hat was writing names. Cindy could have cried. For *almost every charity . . .* she volunteered, worked hard, served on the meanest committees, did menial chores which more socially prominent women rejected; then to be left out like this . . .

Damn you again, Mel Bakersfeld! Damn the bitching snow! And screw that demanding, stinking, marriage-wrecking airport!

The newspaperman, Derek Eden, was coming back with Cindy's drink and one of his own. Threading his way across the room, he saw her watching him and smiled. He looked

sure of himself. If Cindy knew men, he was probably calculating what his chances were of laying her tonight. Reporters, she supposed, knew all about neglected, lonely wives.

Cindy did some calculating of her own concerning Derek Eden. Early thirties, she thought; old enough to be experienced, young enough to be taught a thing or two and to get excited, which was what Cindy liked. A good body from the outward look of him. He would be considerate, probably tender; would give as well as take. And he was available; even before he left to get the drinks he had already made that clear. Communication didn't take long between two reasonably sensitive people with a similar idea.

A few minutes earlier she had weighed the alternatives of going home or to the airport. Now, it seemed, there might be a third choice.

"There you are." Derek Eden handed her the drink. She glanced at it; there was a lot of Bourbon, and he had probably told the barman to pour heavily. Really!—men were so obvious.

"Thank you." She sipped, and regarded him across the glass.

Derek Eden raised his own drink and smiled. "Noisy in here, isn't it?"

For a writer, Cindy thought, his dialogue was deplorably unoriginal. She supposed she was expected to say yes, then the next thing he would come up with would be, *Why don't we go some place where it's quieter?* The lines to follow were equally predictable.

Postponing her response, Cindy took another sip of Bourbon.

She considered. Of course, if Lionel were in town she would not have bothered with this man. But Lionel, who was her storm anchor at other times, and who wanted her to divorce Mel so that he, Lionel, could marry her, Cindy . . . Lionel was in Cincinnati (or was it Columbus?) doing whatever architects did when they went on business trips, and wouldn't be back for another ten days, perhaps longer.

Mel didn't know about Cindy and Lionel, at least not specifically, though Cindy had an idea that Mel suspected she had a lover somewhere, stashed away. She also had a parallel notion that Mel didn't mind much. It gave him an excuse to concentrate on the airport, to the hotel, and

that goddamned airport, which had been fifty times worse than a mistress in their marriage.

It had not always been that way.

Early in their marriage, soon after Mel left the Navy, Cindy had been proud of his ambitions. Later, when Mel was rapidly ascending the lower rungs of aviation management, she was happy when promotions, new appointments, came his way. As Mel's stature grew, so did Cindy's—especially socially, and in those days they had social engagements almost every evening. On behalf of them both, Cindy accepted invitations to cocktail parties, private dinners, opening nights, charity soirees . . . and if there were two the same night, Cindy was expert at judging which was more important, and turning down the other. That kind of socializing, getting to know prominent people, was important to a young man on the rise. Even Mel saw that. He went along with everything Cindy arranged, without complaining.

The trouble was, Cindy now realized, she and Mel had two different long-term aims. Mel saw their social life as a means to fulfilling his professional ambitions; his career was the essential, the socializing a tool which eventually he would dispense with. Cindy, on the other hand, envisaged Mel's career as a passport to an even greater—and higher level—social life. Looking back, it sometimes occurred to her that if they had understood each other's point of view better in the beginning, they might have compromised. Unfortunately, they hadn't.

Their differences began around the time that Mel—in addition to being general manager of Lincoln International—was elected president of the Airport Operators Council.

When Cindy learned that her husband's activity and influence now extended to Washington, D.C., she had been overjoyed. His subsequent summons to the White House, the rapport with President Kennedy, led Cindy to assume they would plunge forthwith into Washington society. In roseate daydreams she saw herself strolling—and being photographed—with Jackie or Ethel or Joan, at Hyannis Port or on the White House lawn.

It hadn't happened; not any of it. Mel and Cindy had not become involved in Washington social life at all, although they could have done so quite easily. Instead, they began—at Mel's insistence—declining some invitations. Mel reasoned that his professional reputation was now such that he no

longer needed to worry about being "in" socially, a status he had never cared for, anyway.

When she caught on to what was happening, Cindy exploded, and they had a first-class row. That was a mistake, too. Mel would sometimes respond to reason, but Cindy's anger usually made him stand firm to the point of obstinacy. Their dispute raged for a week, Cindy becoming bitchier as it progressed, thus making things worse. Being bitchy was one of Cindy's failings, and she knew it. Half the time she didn't intend to be that way, but sometimes, faced with Mel's indifference, her fiery temper got the better of her—as it had on the telephone tonight.

After the week-long argument, which never really ended, their quarrels became more frequent; they also stopped trying to conceal them from the children, which was impossible, anyway. Once—to the shame of them both—Roberta announced that in future after school she would be going to a friend's house first, "because when I stay home, I can't do my homework while you're fighting."

Eventually a pattern was established. Some evenings Mel accompanied Cindy to certain social events which he had agreed on in advance. Otherwise, he stayed longer hours at the airport and came home less frequently. Finding herself alone much more, Cindy concentrated on what Mel sneered at as her "junior league charities" and "silly social climbing."

Well, maybe at times, Cindy thought, it did look silly to Mel. But she didn't have much else, and it so happened she enjoyed the social status competition—which was what it was, really. It was all very well for a man to criticize; men had plenty of activities to occupy their time. In Mel's case there was his career, his airport, his responsibilities. What was Cindy supposed to do? Stay home all day and dust the house?

Cindy had no illusions about herself so far as mental acuity went. She was no great intellect, and she knew that in lots of ways, mentally, she would never measure up to Mel. But then, that was nothing new. In their early years of marriage, Mel used to find her occasional mild stupidities amusing, though nowadays when he derided her—as he had taken to doing lately—he seemed to have forgotten that. Cindy was also realistic about her former career as an actress—she would never have made the grade to stardom, or have come close to it. It was true that, in the past, she sometimes implied that she might have done so if marriage had not ended

her theatrical activity. But that was merely a form of self-defense, a need to remind others—including Mel—that she was an individual as well as being the airport manager's wife. Within herself Cindy knew the truth—that as a professional actress she would almost certainly not have risen above bit parts.

The involvement in social life, however—in the *mise en scène* of local society—was something Cindy could handle. It gave her a sense of identity and importance. And although Mel scoffed, and denied that what Cindy had done was an achievement, she *had* managed to climb, to be accepted by socially conspicuous people whom she would not have met otherwise, and to be involved in events like tonight's . . . except that on this occasion she needed Mel as escort, and Mel—thinking first of his goddamned airport, as always—had let her down.

Mel, who had so much in the way of identity and prestige, had never understood Cindy's need to carve out some kind of individuality for herself. She doubted if he ever would.

Just the same, Cindy had gone ahead. She also had plans for the future which she knew would entail a monstrous family battle if she and Mel stayed married. It was Cindy's ambition to have her daughter Roberta, and later Libby, presented as debutantes at the Passavant Cotillion, glittering apex of the Illinois deb season. As the girls' mother, Cindy herself would garner social status.

She had once mentioned the notion casually to Mel, who reacted angrily, "Over my dead body!" Debutantes and their silly, simpering mothers, he advised Cindy, belonged to an age that was gone. Debutante balls, he declared—and thank goodness there were few of them left—were an anachronistic perpetuation of a snobbery and class structure which the nation was fortunately shedding, though—judging by people who still thought as Cindy did—not nearly fast enough. Mel wanted his children to grow up (he told Cindy) with the knowledge that they were equal to others, but not with some conceited, misguided notion that they were socially superior. And so on.

Unusual for Mel, whose policy declarations were normally brief and concise, he had gone on for some time.

Lionel, on the other hand, thought the whole thing was a good idea.

Lionel was Lionel Urquhart. At the moment he hovered alongside Cindy's life in the shape of a question mark.

Curiously, it was Mel who had brought Cindy and Lionel together to begin with. Mel had introduced them at a civic luncheon which Lionel was attending because of something architectural he had done for the city, and Mel was there because of the airport. The two men had known each other casually for years.

Afterward, Lionel telephoned Cindy, and they met a few times for luncheons and dinners, then more frequently, and eventually for the ultimate intimacy between a man and a woman.

Unlike many people who made a practice of extra-marital sex, Lionel had taken the experience extremely seriously. He lived alone, having been separated from his wife for several years, but was not divorced. Now he wanted to get a divorce, and have Cindy do the same, so they could marry. By this time, he knew that Cindy's own marriage was shaky.

Lionel and his estranged wife had never had children—a fact, he confided to Cindy, that he greatly regretted. It was not too late, he declared, for Cindy and himself to have a child if they married soon. Also, he would be more than happy to provide a home for Roberta and Libby, and would do his best to be a substitute father.

Cindy had put off a decision for several reasons. Principally, she hoped that relations between herself and Mel would improve, making their marriage closer to what it used to be. She could not say with assurance that she was still in love with Mel; love, Cindy found, was something you became more skeptical about as you grew older. But at least she was used to Mel. He was there; so were Roberta and Libby; and, like many women, Cindy dreaded a major upheaval in her life.

Initially, too, she believed that a divorce and remarriage would be damaging to her socially. On this point, however, she had now changed her mind. Plenty of people had divorces without dropping out of sight socially, even temporarily, and one saw wives with old husbands one week, new ones the next. Cindy even had the impression sometimes that not to have been divorced, at least once, was somewhat square.

It was possible that marriage to Lionel might improve Cindy's status socially. Lionel was much more amenable to

partying and entertaining than Mel. Also, the Urquharts were an old, respected city family. Lionel's mother still presided, dowager-like, over a decaying mansion near the Drake Hotel, where an antique butler ushered visitors in, and an arthritic maid brought afternoon tea on a silver tray. Lionel had taken Cindy there for tea one day. Afterward he reported that Cindy had made a good impression, and he was sure he could persuade his mother to sponsor Roberta and Libby as debutantes when the time came.

There and then—because her differences with Mel had grown even more intense—Cindy might have plunged ahead, committing herself to Lionel, except for one thing. Sexually, Lionel was a dying duck.

He tried hard, and occasionally he managed to surprise her, but most of the times they made love he was like a clock whose mainspring is running down. He said gloomily one night, after an abortive session in the bedroom of his apartment, which had been frustrating for both of them, "You should have known me when I was eighteen; I was a young ram." Unfortunately, Lionel was now a long way from eighteen; he was forty-eight.

Cindy envisaged that if she married Lionel, such limited sex as they now enjoyed as lovers would drift into nothingness when they came to live together. Of course, Lionel would try to make up in other ways—he was kind, generous, considerate—but was that enough? Cindy was far from being on the wane sexually; she had always been strongly sensual, and lately her desire and sexual appetite seemed to have grown. But even if Lionel failed in that area, she wasn't batting any better with Mel right now, so what was the difference? Overall, Lionel would give her more.

Perhaps the answer was to marry Lionel Urquhart and do some bedding down on the side. The latter might be difficult, especially when she was newly married, but if she was cautious it could be managed. Other people she knew of—men and women, some in high places—did the same thing to keep themselves satiated physically, and their marriages intact. After all, she had succeeded in deceiving Mel. He might suspect her in a general sense, but Cindy was positive that Mel had no definite knowledge about Lionel or anyone else.

Now, how about tonight? Should she go to the airport for a showdown with Mel, as she had considered earlier? Or should she let herself get involved for the evening with this

newspaperman, Derek Eden, who was standing beside her waiting for an answer to his question.

It occurred to Cindy that perhaps she could manage both. She smiled at Derek Eden. "Tell me again. What was it you said?"

"I said it was noisy in here."

"Yes, it is."

"I wondered if we might skip the dinner and go somewhere quieter."

Cindy could have laughed aloud. Instead, she nodded. "All right."

She glanced around at the other hosts and guests of the Archidona Children's Relief Fund press party. The photographers had stopped taking pictures; so there was really no point in staying any longer. She could slip out quietly, and not be noticed.

Derek Eden asked, "Do you have a car here, Cindy?"

"No, do you?" Because of the weather, Cindy had come in a taxi.

"Yes."

"All right," she said, "I won't leave here with you. But if you're waiting in your car, outside, I'll come through the main doors in fifteen minutes."

"Better make it twenty minutes. I'll need to make a couple of phone calls."

"Very well."

"Do you have any preference? I mean where we'll go?"

"That's entirely up to you."

He hesitated, then said, "Would you like dinner first?"

She thought amusedly: the "first" was a message—to make quite sure she understood what she was getting into.

"No," Cindy said. "I haven't time. I have to be somewhere else later."

She saw Derek Eden's eyes glance down, then return to her face. She sensed the intake of his breath, and had the impression that he was marveling at his own good fortune. "You're the greatest," he said. "I'll only believe my good luck when you come out through those doors."

With that, he turned away and slipped quietly from the La Salle Salon. A quarter of an hour later, unnoticed, Cindy followed him.

She collected her coat and, as she left the Lake Michigan Inn, drew it closely around her. Outside it was still snowing,

and an icy, shrieking wind swept across the open spaces of the Lakeshore and the Outer Drive. The weather made Cindy remember the airport. A few minutes ago she had made a firm resolve: she would still go there, later tonight; but it was early yet—not quite half-past nine—and there was plenty of time—for everything.

A porter forsook the shelter of the Inn doorway and touched his hat. "Taxi, ma'am?"

"I don't think so."

At that moment the lights of a car in the parking lot came on. It moved forward, skidding once on the loose snow, then came toward the door where Cindy was waiting. The car was a Chevrolet, several models old. She could see Derek Eden at the wheel.

The porter held the car door open and Cindy got in. As the door slammed closed, Derek Eden said, "Sorry about the car being cold. I had to call the paper, then make some arrangements for us. I got here just ahead of you."

Cindy shivered, and pulled her coat even tighter. "Wherever we're going, I hope it's warm."

Derek Eden reached across and took her hand. Since the hand was resting on her knee, he held that too. Briefly she felt his fingers move, then he returned his hand to the wheel. He said softly, "You'll be warm. I promise."

7

Forty-five minutes before its scheduled departure time of 10 P.M., Trans America Airlines Flight Two—*The Golden Argosy*, Captain Vernon Demerest commanding—was in the final stages of preparation for its five-thousand-mile, non-stop journey to Rome.

General preparations for the flight had been under way for months and weeks and days. Others, more immediate, had continued for the past twenty-four hours.

An airline flight from any major terminal is, in effect, like a river joining the sea. Before it reaches the sea, a river is fed by tributaries, originating far back in time and distance, each tributary joined along its length by others, either greater or smaller. At length, at the river's mouth, the river itself is the

sum of everything which flowed into it. Translated into aviation terms, the river at the sea is an airliner at its moment of takeoff.

The aircraft for Flight Two was a Boeing 707-320B Intercontinental Jetliner, registered number N-731-TA. It was powered by four Pratt & Whitney turbofan jet engines, providing a cruising speed of six hundred and five miles per hour. The aircraft's range, at maximum weight, was six thousand miles, or the straight line distance from Iceland to Hong Kong. It carried a hundred and ninety-nine passengers and twenty-five thousand U.S. gallons of fuel—enough to fill a good-sized swimming pool. The aircraft's cost to Trans America Airlines was six and a half million dollars.

The day before yesterday N-731-TA had flown from Düsseldorf, Germany, and, two hours out from Lincoln International, an engine overheated. As a precaution, the captain ordered it shut down. None of the aircraft's passengers were aware that they were operating with three engines instead of four; if necessary, the aircraft could have flown on one. Nor was the flight even late arriving.

Trans America Maintenance, however, was advised by company radio. As a result, a crew of mechanics was waiting, and whisked the airplane to a hangar as soon as passengers and freight were disembarked. Even while taxiing to the hangar, diagnostic specialists were at work, seeking out the airplane's trouble, which they located quickly.

A pneumatic duct—a stainless steel pipe around the affected engine—had cracked and broken in flight. The immediate procedure was for the engine to be removed and a replacement installed. That was relatively simple. More complicated was the fact that for several minutes before the overheating engine was shut down, extremely hot air must have escaped into the engine nacelle. This heat could conceivably have damaged one hundred and eight pairs of wires from the aircraft's electrical system.

Close examination of the wires showed that while some had been heated, none apparently had suffered damage. If a similar condition had occurred within an automobile, bus, or truck, the vehicle would have been put back into service without question. But airlines took no such chances. It was decided that all one hundred and eight pairs of wires must be replaced.

The work of replacement was highly skilled, but exacting

and tedious because only two men at a time could operate in the confined space of the engine nacelle. Moreover, each pair of wires must be identified, then connected painstakingly to cannon plugs. A non-stop, day-and-night effort was planned, with teams of electrical mechanics relieving each other.

The entire job would cost Trans America Airlines thousands of dollars in skilled man-hours and lost revenue while the big aircraft was unproductive on the ground. But the loss was accepted without question, as all airlines accepted such losses in pursuit of high safety standards.

The Boeing 707—N-731-TA—which was to have flown to the West Coast and back before its flight to Rome, was taken out of service. Operations was advised, and hastily shuffled schedules to help bridge the gap. A connecting flight was canceled and several dozen passengers transferred to competitive airlines. There was no substitute aircraft. When it came to multimillion-dollar jets, airlines did not carry spares.

Operations, however, urged Maintenance to have the 707 ready for Flight Two to Rome, which was then thirty-six hours away from scheduled departure. An operations vice-president in New York personally called the Trans America base maintenance chief, and was told: "If we can get it ready for you, we will." A top-notch foreman and a crack crew of mechanics and electricians were already on the job, all of them aware of the importance of finishing quickly. A second crew, to relieve the others through the night, was being rounded up. Both crews would work extra hours until the job was done.

Contrary to general belief, aircraft mechanics took a close interest in the operational flights of airplanes they serviced. After a complex job, or a rush one such as this, they would follow the progress of a particular airplane to learn how their work had stood up. It was a source of satisfaction to them when, as usually happened, the airplane functioned well. Months later they might say to each other, observing an airplane taxiing in, "There's old 842. Remember that time . . . and the trouble we had with her. I guess we cured it."

Through the critical day and a half following discovery of the trouble with N-731-TA, work on the airplane, though slow by its nature, continued as speedily as possible.

At length, three hours from Flight Two's departure time, the last of the hundred-odd pairs of wires was reconnected.

took another hour to replace the engine cowling and for a engine run-up on the ground. Then, before the airplane could be accepted for service, an air test was required. By his time, urgent calls from Operations demanded: Would N-731-TA be ready for Flight Two or not? If not, would Maintenance for Chrissake say so, so Sales could be informed of a possible long delay, and passengers notified before they left their homes.

His fingers crossed, and touching wood, the maintenance chief replied that, barring complications on the air test, the aircraft would be available on time.

It was—but only just. The chief Trans America pilot at the base, who had been standing by for just that purpose, test flew the airplane, barreling up through the storm to clearer altitudes above. He reported on return: "You guys down here'd never know it, but the moon's still there," then certified N-731-TA as completely airworthy. Executive pilots liked that kind of assignment; it helped build up their needed flying hours without going far from their desks.

There was so little time left when the chief pilot landed, that he taxied the airplane directly to gate forty-seven of the terminal, where—as Flight Two, *The Golden Argosy*—it was to load.

Thus Maintenance had come through—as Maintenance did so often—but no corners had been cut.

Once the airplane was at its gate, knots of workers bustled in and around it like scurrying elves.

Food was a major item to go aboard. Seventy-five minutes before departure time, Departure Control called the caterer's flight kitchen, ordering food for the flight, according to the number of passengers expected. Tonight the first-class section of Flight Two would have only two vacant seats; the economy section would be three quarters full. First-class, as usual, was allocated six meals extra; economy had the same number of meals as passengers. Thus, first-class passengers could have a second dinner if they asked for it; economy passengers couldn't.

Despite the exact count, a last-minute passenger would always get a meal. Spare meals—including Kosher meals—were available in lockers near the departure gate. If an unexpected passenger went aboard as doors were closing, his food tray was passed in after him.

Liquor stocks, requiring a signed stewardess receipt, came

aboard too. Liquor for first-class passengers was free; tourist passengers paid a dollar a drink (or the equivalent in foreign currency) unless they took advantage of a piece of inside information. The information was that stewardesses were issued almost no change, sometimes none, and where a stewardess could not make change, her instructions were to give the passenger his or her drinks free. Some regular travelers had drunk free for years in tourist class, merely by proffering a fifty- or twenty-dollar bill and insisting they had nothing smaller.

At the same time that the food and liquor went aboard, other commissary supplies were checked and replenished. There were several hundred items, ranging from babies' diapers, blankets, pillows, airsick bags, and a Gideon Bible to accessories like "Tray, beverage service, 8-hole, qty. 5." All were expendable. At the conclusion of a flight, airlines never bothered checking inventories. Whatever was missing was replaced without question, which was why passengers who walked from an airplane with anything portable were seldom stopped.

Included in commissary supplies were magazines and newspapers. Newspapers were usually available on flights—with an exception. The Trans America commissary had a standing order: if a newspaper front page featured an air disaster, the newspapers were not to go aboard, but were thrown away. Most other airlines had the same rule.

Tonight, on Flight Two, there were plenty of newspapers. The principal news was weather—the effect, on the entire Midwest, of the three-day winter storm.

Baggage was now coming aboard Flight Two as passengers were beginning to check in. When a passenger saw his bag disappear at the check-in counter it went, by a series of conveyor belts, to a room deep below the departure gates which baggage men privately called "the lion's den." It acquired that name because (so baggage men confided after several drinks) only the brave or innocent would allow a bag they cared about to enter here. Some bags—as saddened owners could testify—came into the lion's den and were never seen again.

In the den, an attendant on duty watched each bag arrive. According to its destination label, he flicked a lever on a panel and, a moment later, an automatic arm reached out and grabbed the bag, setting it beside others for the same flight.

From this point, and others, a crew of several men transferred all bags to the proper airplanes.

It was an excellent system—when it worked. Unfortunately, it often didn't.

Baggage handling—airlines conceded privately—was the least efficient part of air travel. In an age where human ingenuity could place a capsule the size of a houseboat in outer space, it was a fact that an airline passenger's bag could not be counted on to arrive safely at Pine Bluff, Arkansas, or Minneapolis-St. Paul, or even at the same time as the passenger. An astounding amount of airline baggage—at least one bag in every hundred—went to wrong destinations, was delayed or lost entirely. Executives pointed woefully to the many opportunities for human error which existed with baggage handling. Efficiency experts periodically examined airline baggage systems, and periodically they were improved. Yet no one had come up with a system which was infallible— even close to it. The result was that all airlines employed staffs, at every major terminal, whose job was solely to trace missing baggage. Such staffs were seldom idle.

An experienced, cagey traveler did the best he could by making sure that the tags which agents or porters put on his bags when he checked in showed his correct destination. Often they didn't. With surprising frequency, wrong tags were slapped on in haste, and had to be changed when the error was pointed out. Even then, when the bags disappeared from sight, there was the sense of having entered a labyrinth, and at that point the traveler could only pray that some day, somewhere, he would be reunited with his baggage again.

Tonight, at Lincoln International—though it was late yet—the baggage for Flight Two was already being loaded. Two bags, which should have gone to Rome, were at the moment being loaded aboard a flight for Milwaukee.

Freight was now going aboard Flight Two in a stream. So was mail. Tonight there was the usual pounds of mail in colored nylon bags, some for London—Milan, Palermo, Vatican City, Pisa, Naples, Rome—and for onward transmission to faraway places like Rome, like pages from Marco Polo... London, Rome, Paris, bass, Jerusalem, Athens, Rhodes, Calcutta.

The heavier-than-usual mail load was a sign of the America. A flight of British Overseas Airways Corporation scheduled to leave shortly before their American flight.

had just announced a three-hour delay. The post office ramp supervisor, who kept constant watch on schedules and delays, promptly ordered a switch of mail from the BOAC airliner to Trans America. The British airline would be unhappy because carriage of mail was highly profitable, and competition for post office business keen. All airlines kept uniformed representatives at airport post offices, their job to keep an eye on the flow of mail and insure that their own airline got a "fair share"—or more—of the outgoing volume. Post office supervisors sometimes had favorites among the airline men, and saw to it that business came their way. But in cases of delay, friendships didn't count. At such moments there was an inflexible rule: the mail went by the fastest route.

Inside the terminal, at lower level, and a few hundred feet from the Boeing 707 aircraft which was now Flight Two, was Trans America Control Center (Lincoln International). The center was a bustling, jam-packed, noisy conglomeration of people, desks, telephones, teletypes, Tel Autographs, private line TV, and information boards. Its personnel were responsible for directing the preparation of Flight Two and all other Trans America flights. On occasions like tonight, with schedules chaotic because of the storm, the atmosphere was pandemonic, the scene resembling an old-time newspaper city room, as seen by Hollywood.

In a corner of the control center was the Load Control desk—the desk top invisible beneath a sea of paper—manned by a young, bearded man with the improbable name of Fred Phirmphoot. In his spare time Phirmphoot was an abstract painter; recently he had taken to throwing paint on canvas, then riding over it with a child's tricycle. He was reputed to dabble—at weekends—with LSD, and also suffer from body odor. The last was a constant annoyance to fellow workers in the control center—hot and stuffy in spite of the cold, bitter weather outside—and more than Fred Phirmphoot had been told that he should take a shower more often.

Yet, paradoxically, Phirmphoot had a keen mathematical mind, and his superiors swore that he was one of the best control men in the business. At the moment he was masterminding the loading of Flight Two.

An airplane (Fred Phirmphoot would occasionally call his bored beat friends), "She's a bird that's a teeter

man. If you ain't hep, that airplane chick'll teeter or totter, maybe the twain; but me, baby, I don't let it none."

The trick was to distribute weight correctly through the airplane so that its fulcrum point and center of gravity were at predetermined places; hence, the aircraft would be balanced, and stable in the air. Fred Phirmphoot's job was to calculate how much could be stowed aboard Flight Two (and other flights) and where. No mailbag, no individual piece of freight, went into any position in the aircraft hold without his say-so. At the same time, he was concerned with cramming in as much as possible. "Illinois to Rome, man," Fred was apt to declare, "that's long spaghetti. It don't pay off in marmalade."

He worked with charts, manifests, tabulations, an adding machine, last-minute messages, a walkie-talkie, three telephones—and an uncanny instinct.

The ramp supervisor had just asked, by walkie-talkie, for permission to load another three hundred pounds of mail in the forward compartment.

"Roger-dodger," Fred Phirmphoot acknowledged. He shuffled papers, checking the passenger manifest which had lengthened in the past two hours. Airlines allowed an average weight for passengers—a hundred and seventy pounds in winter, ten pounds less in summer. The average always worked out, with one exception: when a football team was traveling. The husky ballplayers threw all calculations out of joint, and at that time load dispatchers added their own estimates, which varied according to how well they knew the team. Baseball and hockey players were no problem; being smaller they fitted the average. Tonight the manifest showed that Flight Two had only normal passengers.

"It's okay for the mail, baby," Fred Phirmphoot replied into the walkie-talkie, "but I want that coffin moved back to the rear compartment; from the look of the weight slip, that dead guy was a fatso. Also, there's a packaged generator from Westinghouse. Locate that midships; the rest of the freight can fit around it."

Phirmphoot's problems had just been added to by an order from the crew of Flight Two that an extra two thousand pounds of fuel were to be added for taxiing and ground running, in addition to the normal reserve for that purpose. Out on the airfield tonight, all aircraft were being subjected to long delays, with engines running, before takeoff. A jet en-

gine, operating at ground level, drank fuel like a thirsty elephant, and Captains Demerest and Harris didn't want to waste precious gallongage which they might require on the way to Rome. At the same time, Fred Phirmphoot had to calculate that all that extra fuel, which was now being pumped into the wing tanks of N-731-TA, might not be burned before takeoff; therefore, some of it could be added to the total takeoff weight. The question was, how much?

There were safety limits for gross weights at takeoff, yet with every airline flight the objective was to carry as much as possible, to earn maximum revenue. Fred Phirmphoot's dirty fingernails danced over his adding machine, making hasty computations. He pondered the result, fingering his beard, his body odor rather worse than usual.

The decision about extra fuel was one of many decisions which Captain Vernon Demerest had been making for the past half hour. Or rather, he had been letting Captain Anson Harris make the decisions, then—as check captain with the final responsibility—Demerest approved them. Vernon Demerest was enjoying his passive role tonight—having someone else do most of the work, yet relinquishing none of his own authority. So far Demerest had not faulted any of Anson Harris's decisions, which was not surprising since Harris's experience and seniority were almost as great as Demerest's own.

Harris had been dour and huffy when they met for the second time tonight in the crew room at the Trans America hangar. Demerest noted with amusement that Anson Harris was wearing a regulation shirt, though it was on the small side, and every now and then Harris's hand would go up to ease the collar. Captain Harris had managed to switch shirts with an obliging first officer who later related the story zestfully to his own captain.

But after a few minutes, Harris relaxed. A professional to his bushy, graying eyebrows, he was aware that no flight crew could function efficiently with hostility in the cockpit.

In the crew room both captains inspected their mail slots and there was a pile of mail as usual, some of it company bulletins which must be read before tonight's flight. The remainder—memos from the chief pilot, medical branch, the research department, cartographer's office, and the rest, they would take home to go through later.

While Anson Harris inserted a couple of amendments in

his flight manuals—which Demerest had announced his intention of checking—Vernon Demerest studied the Crew Schedule Board.

The Schedule Board was made up monthly. It showed the dates on which captains and first and second officers would fly, and on which routes. There was a similar board for stewardesses in their crew room down the hall.

Every pilot bid, each month, for the route he wanted to fly, and those who were most senior got first choice. Demerest invariably got what he bid for; so did Gwen Meighen, whose seniority among the stewardesses was correspondingly high. It was the bidding system which made it possible for pilots and stewardesses to make mutual layover plans much as Demerest and Gwen had done in advance of tonight.

Anson Harris had finished the hasty amending of his flight manuals.

Vernon Demerest grinned. "I guess your manuals are okay, Anson. I've changed my mind; I won't inspect them."

Captain Harris gave no sign, except a tightening around his mouth.

The second officer for the flight, a young two-striper named Cy Jordan, had joined them. Jordan was flight engineer; also a qualified pilot. He was lean and angular, with a hollow-cheeked, mournful face, and always looked as if he needed a good meal. Stewardesses heaped extra food upon him, but it never seemed to make any difference.

The first officer who usually flew as second-in-command to Demerest, tonight had been told to stay home, though under his union contract he would receive full pay for the round-trip flight. In the first officer's absence, Demerest would do some of the first officer duties, Jordan the rest. Anson Harris would do most of the flying.

"Okay," Demerest told the other two, "let's get moving."

The crew bus, snow-covered, its windows steamed inside, was waiting at the hangar door. The five stewardesses for Flight Two were already in the bus, and there was a chorus of "Good evening, Captain . . . good evening, Captain," as Demerest and Anson Harris clambered in, followed by Jordan. A gust of wind, and snow flurries, accompanied the pilots. The bus driver hastily closed the door.

"Hi, girls!" Vernon Demerest waved cheerfully, and winked at Gwen. More conventionally, Anson Harris added a "Good evening."

The wind buffeted the bus as the driver felt his way warily around the plowed perimeter track, the snowbanks high on either side. Word had filtered around the airport of the experience of the United Air Lines food truck earlier in the evening, and all vehicle drivers were being cautious as a result. As the crew bus neared its destination, the bright terminal lights were a beacon in the darkness. Farther out on the airfield a steady stream of aircraft was taking off and landing.

The bus stopped, and the crew scrambled out, diving for the shelter of the nearest door. They were now in the Trans America wing of the terminal, at lower level. The passenger departure gates—including gate forty-seven, where Flight Two was being readied—were above.

The stewardesses went off to complete their own preflight procedures while the three pilots headed for the Trans America international dispatch office.

The dispatcher, as always, had prepared a folder with the complex information which the flight crew would need. He spread it out on the dispatch office counter and the three pilots pored over it. Behind the counter a half-dozen clerks were assembling world-wide information on airways, airport conditions, and weather which other international flights of Trans America would require tonight. A similar dispatch room for domestic flights was down the hall.

It was at that point that Anson Harris tapped a preliminary load report with his pipestem and asked for the extra two thousand pounds of fuel for taxiing. He glanced at the second officer, Jordan, who was checking fuel consumption graphs, and Demerest. Both nodded agreement, and the dispatcher scribbled an order which would be relayed to the ramp fueling office.

The company weather forecaster joined the other four. He was a pale young man, scholarly behind rimless glasses, who looked as if he rarely ventured out into the weather personally.

Demerest inquired, "What have the computers given us tonight, John? Something better than here, I hope."

More and more, airline weather forecasts and flight plans were being spewed out by computers. Trans America and other airlines still maintained a personal element, with individuals liaising between computers and flight crews, but predictions were that the human weathermen would disappear soon.

After a few moments the second officer reported, "We should be able to reach thirty-three thousand around Detroit."

Anson Harris nodded. His gold ballpoint pen was racing as he filled in a flight plan which, in a few minutes' time, he would file with air traffic control. ATC would then tell him whether or not the altitudes he sought were available and, if not, what others he might have. Vernon Demerest, who normally would have prepared his own flight plan, glanced over the form when Captain Harris finished, then signed it.

All preparations for Flight Two, it seemed, were going well. Despite the storm, it appeared as if *The Golden Argosy*, pride of Trans America, would depart on time.

It was Gwen Meighen who met the three pilots as they came aboard the aircraft. She asked, "Did you hear?"

Anson Harris said, "Hear what?"

"We're delayed an hour. The gate agent just had word."

"Damn!" Vernon Demerest said. "Goddam!"

"Apparently," Gwen said, "a lot of passengers are on their way, but have been held up—I guess because of the snow. Some have phoned in, and Departure Control decided to allow them extra time."

Anson Harris asked, "Is boarding being delayed too?"

"Yes, Captain. The flight hasn't been announced. It won't be for another half-hour, at least."

Harris shrugged. "Oh, well; we might as well relax." He moved toward the flight deck.

Gwen volunteered, "I can bring you all coffee, if you like."

"I'll get coffee in the terminal," Vernon Demerest said. He nodded to Gwen. "Why don't you come with me?"

She hesitated. "Well, I could."

"Go ahead," Harris said. "One of the other girls can bring mine, and there's plenty of time."

A minute or two later, Gwen walked beside Vernon Demerest, her heels clicking as she kept pace with his strides down the Trans America departure wing. They were heading for the main terminal concourse.

Demerest was thinking: the hour's delay might not be a bad thing after all. Until this moment, with the essential business of Flight Two to think about, he had pushed all thoughts of Gwen's pregnancy from his mind. But, over coffee and a cigarette, there would be a chance to continue the discussion they had begun earlier. Perhaps, now, the subject

which he had not broached before—an abortion—could be brought into the open.

8

Nervously, D. O. Guerrero lit another cigarette from the stub of his previous one. Despite his efforts to control the motion of his hands, they trembled visibly. He was agitated, tense, anxious. As he had earlier, while putting his dynamite bomb together, he could feel rivulets of perspiration on his face and beneath his shirt.

The cause of his distress was time—the time remaining between now and the departure of Flight Two. It was running out, remorselessly, like sand from an hourglass; and much—too much—of the sand was gone.

Guerrero was in a bus en route to the airport. Half an hour ago the bus had entered the Kennedy Expressway, from which point, normally, there would have been a swift, fifteen-minute ride to Lincoln International. But the expressway, like every other highway in the state, was impeded by the storm, and jammed with traffic. At moments the traffic was halted, at other times merely inching along.

Before departure from downtown, the dozen or so bus passengers—all destined for Flight Two—had been told of their flight's delay by one hour. Even so, at the present rate of progress, it appeared as if it might take another two hours, perhaps three, to get to the airport.

Others in the bus were worried, too.

Like D. O. Guerrero, they had checked in at the Trans America downtown terminal in the Loop. Then, they had been in plenty of time, but now, in view of the mounting delay, were wondering aloud whether Flight Two would wait for them indefinitely, or not.

The bus driver was not encouraging. In reply to questions, he declared that usually, if a bus from a downtown terminal was late, a flight was held until the bus arrived. But when conditions got really bad, like tonight, anything could happen. The airline might figure that the bus would be held an hour or more—as it could be—and that the flight should go. Also, the driver added, judging by the few people in the air

it looked as if most passengers for Flight Two were out at the airport already. That often happened with international flights, he explained; relatives came to see passengers off, and drove them out by car.

The discussion went back and forth across the bus, though D. O. Guerrero, his spindly body hunched into his seat, took no part in it. Most of the other passengers appeared to be tourists, with the exception of a voluble Italian family—a man and woman with several children—who were talking animatedly in their own language.

"If I were you, folks, I wouldn't worry," the bus driver had announced a few minutes earlier. "The traffic ahead looks as if it's loosenin' up some. We might just make it."

So far, however, the speed of the bus had not increased.

D. O. Guerrero had a double seat section, three rows back from the driver, to himself. The all-important attaché case was held securely on his lap. He eased forward, as he had done several times already, straining to peer ahead into the darkness beyond the bus; all he could see, through the twin arcs cleared by the big, slapping windshield wipers; was what appeared to be an endless string of vehicle lights, disappearing into the falling snow. Despite his sweating, his pale, thin lips were dry; he moistened them with his tongue.

For Guerrero, "just making it" to the airport in time for Flight Two would simply not do. He needed an extra ten or fifteen minutes, at least, to buy flight insurance. He cursed himself for not having gone out to the airport sooner, and bought the flight insurance he needed in plenty of time. In his original plan, purchasing the insurance at the last minute, and thus minimizing any chance of inquiry, seemed a good idea. What he had not foreseen was the kind of night this had turned out to be—though he ought to have foreseen it, remembering the time of year. It was just that kind of thing—overlooking some significant, variable factor—which had dogged D. O. Guerrero through his business enterprises, and time after time brought grandiose schemes to naught. The trouble was, he realized, whenever he made plans, he convinced himself that everything would go exactly as he hoped; therefore he failed to allow for the unexpected. More to the point, he thought bitterly, he never seemed able to learn from past experience.

He supposed that when he got to the airport—assuming Flight Two had not already left—he could go to the Trans

America flight counter and announce himself as being present. Then he would insist on being allowed time to buy flight insurance before the flight took off. But it would involve the one thing he desperately wanted to avoid: drawing attention to himself, in the same way that he had drawn attention already—and for the stupidest omission he could possibly have made.

He had failed to bring any baggage, other than the small, slim attaché case in which he was carrying the dynamite bomb.

At the check-in counter downtown the ticket agent had asked, "Is that your baggage, sir?" He pointed to a large pile of suitcases belonging to a man in line behind.

"No." D. O. Guerrero hesitated, then held up the small attaché-briefcase. "I . . . er . . . don't have anything except this."

The agent's eyebrows went up. "No baggage for a trip to Rome, sir? You really are traveling light." He motioned to the attaché case. "Do you wish to check that?"

"No, thank you." All D. O. Guerrero wanted at that moment was his airline ticket, and to get away from the counter, and secure an inconspicuous seat on the airport bus. But the agent glanced curiously at him a second time, and Guerrero knew that, from this moment onward, he would be remembered. He had stamped himself indelibly on the ticket agent's memory—all because he forgot to bring a suitcase, which he could so easily have done. Of course, the reason he had not done so was instinctive. D. O. Guerrero knew—as others did not—that Flight Two would never reach its destination; therefore no baggage was necessary. But he *ought* to have had baggage, as a cover. Now, at the inquiry which would inevitably follow the flight's loss, the fact that one passenger—himself—had boarded without baggage, would be remembered and commented on. It would underscore whatever other suspicions about D. O. Guerrero investigators might, by that time, have.

But if there were no wreckage, he reminded himself, what could they prove?

Nothing! The flight insurance people would have to pay.

Would the bus *never* get to the airport?

The children from the Italian family were running *scintily* up and down the aisle of the bus. A few seats back, the mother was still jabbering in Italian to the husband. The old

a baby which was crying lustily. Neither the woman nor the man seemed aware of the baby's crying.

Guerrero's nerves were stretched and raw. He wanted to seize the baby and throttle it; to shout to the others, *Shut up! Shut up!*

Couldn't they sense? . . . Didn't the fools know that this was no time for stupid chattering? . . . No time, when Guerrero's whole future—at least, his family's future . . . the success of the plan so painstakingly worked out . . . everything, *everything*, was predicated on getting to the airport with time to spare.

One of the running children—a boy of five or six, with an attractive, intelligent face—stumbled in the aisle and fell sideways into the empty seat beside D. O. Guerrero. In regaining his balance, the boy's hand went out, striking the attaché case still on Guerrero's lap. The case slipped sideways and Guerrero grabbed it. He managed to stop it before it fell, then turned to the child, his face contorted to a snarl, his hand raised to strike.

Wide-eyed, the boy regarded him. He said softly, "*Scusi.*"

With an effort, Guerrero controlled himself. Others in the bus might be watching. If he were not careful, he would draw attention to himself again. Groping for some of the words he had picked up from Italians who had worked for him on construction projects, he said awkwardly, "*È troppo rumorosa.*"

The child nodded gravely. "*Sì.*" He stood where he was.

"All right," Guerrero said. "That's all. Get lost! *Se ne vada!*"

"*Sì,*" the boy said again. His eyes were uncomfortably direct, and for a moment Guerrero was reminded that this child, and others, would be aboard Flight Two. Well, it made no difference. There was no point in becoming sentimental; nothing would change his intentions now. Besides, when it happened, when he pulled the string of the attaché case and the airplane ripped apart, everything would be over quickly, before anyone—especially the children—had time to know.

The boy turned away, and went back in the bus to his mother.

At last!—the bus was moving faster . . . now it was speeding up! Ahead, through the windshield, D. O. Guerrero could see that the traffic had thinned, other lights in front were moving quickly. They might . . . just might . . . arrive at the

airport in time for him to buy flight insurance without any need to arouse attention. But it was going to be close. He hoped the insurance booth would not be busy.

He noticed that the children from the Italian family had returned to their seats, and he congratulated himself about not attracting attention a moment ago. If he had struck the child—as he almost had—people would have made a fuss. At least he had avoided that. It was still a pity that he had got himself noticed when checking in, though when he thought about it, he supposed that no irreparable harm had been done.

Or had it?

A new worry nagged him.

Supposing the ticket agent who had been curious about the absence of any baggage remembered the incident again, after the bus had gone. Guerrero knew he had appeared nervous at the time; supposing the agent had noticed, had later become suspicious. The agent would talk to someone else, a supervisor perhaps, who might already have telephoned the airport. Even at this moment, someone—the police?—might be waiting for the bus to arrive; to interrogate D. O. Guerrero; to open and inspect his single, small attaché case with the damning evidence inside. For the first time Guerrero wondered what would happen if he were caught. It would mean arrest, imprisonment. Then he thought: before he would allow that to happen . . . if he were accosted, if exposure seemed imminent . . . he would pull the loop of string on the outside of the case and blow himself, along with everyone nearby, to pieces. His hand went out. Beneath the attaché case handle he touched the loop of string and held it. It was reassuring . . . Now, for the moment, he would try to think of something else.

He wondered if Inez had yet found his note.

She had.

Inez Guerrero came tiredly into the miserable 51st Street apartment, and slipped off her shoes, which had been hurting, and her coat and kerchief, which were soaked from melted snow. She was aware of a cold coming, and an all-engulfing weariness. Her work as a waitress had been harder than usual today, the customers meaner, the tips smaller. Besides, she was not yet accustomed to it, which took a greater toll.

Two years ago, when the Guerreros lived comfortably in a congenial home in the sful, had been a pleasant. Since then, ravages of t swiftly to her face, so tha than she was, now she lo if Inez had been in a he sought the solace of a hot her in times of trouble—the Guerreros' married lif of sorts down the hall, was unheated and drafty, water heater which had t thought of it defeated her. a while in the shabby livi no idea where her husband

It was some time before room table.

I won't be home for expect to have some g prise you.

Few things surprised I cerned; he had always bee irrational. Good news wo couldn't bring herself to b

ad watched too many of her husband's ambitious schemes totter and collapse to believe in the likelihood of one more possibility succeeding.

But the first part of the note puzzled her. Where was D.O. going "for a few days"? Equally mystifying: What did he intend to use for money? The night before last the Guerreros pooled the last of the money they had in the world. The total was twenty-two dollars and some cents. Besides the money, they had only one thing left worth pawning; it belonged to Inez—her mother's ring, and so far she had resisted parting with it. It might have to go soon.

Of the twenty-two dollars-odd, Inez had taken fourteen, to use for food and as a token payment toward the rent. She had seen the desperation in D.O.'s face as he pocketed the remaining eight dollars and small change.

Inez decided to stop puzzling, and to go to bed as she had

planned. She was too weary even to worry about how her children were faring, though she had not heard from her sister in Cleveland—with whom the children were staying—for more than a week. She turned out the single light in the living room and went into the cramped, shabby bedroom.

She had trouble finding her nightgown. Some of the contents of the rickety dressing chest seemed to have been moved around. Eventually she found the nightgown in a drawer with three of D.O.'s shirts; they were the last he had, so wherever he had gone, he had not taken a change of clothing. Under one of the shirts a folded sheet of yellow paper caught her eye. She took it out and opened it.

The yellow sheet was a printed form which had been filled in by typewriter; what Inez was holding was a carbon copy. When she saw what it was, she sat down, unbelieving, on the bed. To make sure she had not misunderstood, she read the contents of the form again.

It was a time-payment contract between Trans America Airlines and D. O. "Buerrero"—the name, she noticed, was misspelled. The contract acknowledged that "Buerrero" had received a round-trip ticket to Rome, economy class; that he had made a down payment of forty-seven dollars, and hereby promised to pay the balance of four hundred and twenty-seven dollars, plus interest, in installments over twenty-four months.

It didn't make sense.

Inez stared dazedly at the yellow form. Within her mind, questions chased one another.

Why did D.O. need an air ticket at all? And if a ticket, why to Rome? And what about the money? He couldn't possibly pay the installments, though that part, at least, was understandable. There had been plenty of other obligations D. O. Guerrero incurred that he couldn't meet; debts never disturbed him, as they did Inez. But apart from the debt, where had the forty-seven dollars down payment come from? The form acknowledged receipt; the money had been paid. Yet two nights ago, D.O. declared that he had no more money than they pooled, and whatever else he might do, Inez knew he never lied to her.

Yet that forty-seven dollars came from somewhere. Where?

Suddenly, she remembered the ring; it was gold with a single diamond in a platinum setting. Until a week or two ago, Inez wore it regularly, but recently her hands had swol-

len and she took the ring off, leaving it in a small box in one of the bedroom drawers. For the second time tonight she searched the drawers: The box was there—empty. Obviously, to get the forty-seven dollars, D.O. had pawned the ring.

Her first reaction was regret. To Inez, the ring had meant something; it was a last tenuous link between herself and the past, her scattered family, her dead mother whose memory she revered. More realistically; the ring, though not exceptionally valuable, had been a last resort. While it was there, there was the knowledge that however bad things became, the ring would always provide a few days more of living. Now it was gone, and along with it, the minor reassurance.

Yet knowing where the down payment came from for the airline ticket, still provided no answer to the question—why? Why an air journey? Why to Rome?

Still seated on the bed, Inez applied herself to thinking carefully. For the moment, she ignored her tiredness.

Inez was not a highly intelligent woman. If she had been, probably she would not have endured marriage to D. O. Guerrero for almost twenty years; and even now, if better equipped mentally, she would have been more than a coffee-house waitress at a paltry wage. But occasionally, through slow, careful reasoning aided by instinct, Inez could reach right conclusions. Especially where her husband was concerned.

Now, instinct more than reason warned her that D. O. Guerrero was in trouble—more serious trouble than they had yet encountered. Two things convinced her: his irrationality of late, and the length of his intended journey; in the Guerrero's present circumstances, only some monumental, desperate undertaking could require a trip to Rome. She went to the living room and returned with the note, which she read again. Over the years there had been many notes; Inez sensed that this one did not mean what it said.

Beyond that, her reasoning failed to go. But she had the feeling, a conviction growing as each minute passed, that there must be something, *ought* to be something, she should do.

It did not occur to Inez to abdicate entirely; to abandon D.O. to the outcome of whatever new folly he might have begun. She was essentially a simple soul with an uncomplicated nature. Eighteen years ago she accepted D. O. Guerrero "for better or worse." That it had turned out to be mostly

"worse" did not, as Inez saw it, change her responsibility as a wife.

Her cautious, measured reasoning continued. She supposed the first thing to do was find out if D.O. had already left by air; if not, perhaps there was time to stop him. Inez had no idea how much of a start D.O. had, or how many hours ago his note to her was written. She looked again at the yellow time-payment form; it said nothing about when the flight would be, or its departure time, though she could telephone the airline—Trans America. As quickly as she could, Inez began putting on the clothes which, a few minutes earlier, she had taken off.

Her outdoor shoes hurt her feet again, and her coat was still sodden and uncomfortable as she went down the narrow stairs from the apartment to the street. In the mean lower hallway, snow had blown under the outer door and covered the bare boards of the floor. Outside, Inez saw, the snow was even deeper than when she came in. The cold, bleak wind assaulted her as she left the building's shelter, whipping more snow into her face.

There was no telephone in the Guerreros' apartment, and although Inez could have used a pay phone in the lunch counter on the lower floor, she wanted to avoid a meeting with the proprietor, who was also the building landlord. He had threatened eviction tomorrow if the Guerreros' arrears of rent were not paid in full. That was something else which Inez had pushed from her mind tonight, and which—if D.O. failed to return by morning—she would have to face alone.

A drugstore, with a pay phone, was a block and a half away. Picking her way through deep snow on uncleared sidewalks, Inez headed there.

The time was a quarter to ten.

The drugstore telephone was in use by two teen-age girls, and Inez waited almost ten minutes for it to be free. Then, when she dialed the Trans America number, a recording informed her that all lines to Reservations were busy, and would she please wait. She waited while the recording repeated itself several times before a brisk woman's voice declared that she was Miss Young, and could she help?

"Please," Inez said, "I want to ask about flights to Rome."

As if a button had been pressed, Miss Young replied that Trans America had direct non-stop flights from Lincoln International to Rome on Tuesdays and Fridays; through New

York there were connections daily, and did the caller wish to make a reservation now?

"No," Inez said. "No, I'm not going. It's about my husband. Did you say there was one on Fridays . . . a flight . . . tonight?"

"Yes, madam—our Flight Two, *The Golden Argosy*. It departs at ten o'clock local time, except that tonight the flight has been delayed one hour, due to weather conditions."

Inez could see the drugstore clock. By now, it was nearly five past ten.

She said quickly, "You mean the flight hasn't gone yet?"

"No, madam, not yet."

"Please . . ." As she often did, Inez found herself groping for words. "Please, it's important for me to find out if my husband is on that flight. His name is D. O. Guerrero, and . . ."

"I'm sorry; we're not permitted to give out that information." Miss Young was polite but firm.

"I don't think you understand, miss. It's my husband I'm asking about. This is his wife."

"I do understand, Mrs. Guerrero, and I'm sorry; but it's a company rule."

Miss Young, and others like her, were well drilled in the rule and understood its reason. Many businessmen took secretaries or mistresses along on air trips, listing them as wives, to take advantage of family plan fare reductions. In the past, a few suspicious, genuine wives had checked up, causing trouble for the airlines' customers—the men. Later, it was the men who complained bitterly about breaches of confidence, with the result that airlines nowadays made a policy of not disclosing passenger names.

Inez began, "Isn't there any way . . ."

"There really isn't."

"Oh, dear."

"Do I understand," Miss Young inquired, "that you think your husband might be leaving on Flight Two, but you're not sure?"

"Yes, that's right."

"Then the only thing you might do, Mrs. Guerrero, is to go out to the airport. Probably the flight hasn't boarded yet; so if your husband is there, you could see him. Even if the flight has boarded, they might help you at the departure gate. But you'd have to hurry."

"All right," Inez said. "If that's the only thing, I suppose I'd better try." She had no idea how she would get to the airport—more than twenty miles away—in less than an hour, in the storm.

"Just a moment." Miss Young sounded hesitant, her voice more human, as if some of Inez's distress had penetrated through the phones. "I really shouldn't do this, Mrs. Guerrero, but I'll give you a little tip."

"Please."

"At the airport, when you get to the departure gate, don't say you *think* your husband is aboard. Say you know he's aboard and you'd like to speak to him. If he isn't, you'll find out. If he is, it will make it easier for the gate agent to tell you what you want to know."

"Thank you," Inez said. "Thank you very much."

"You're entirely welcome, madam." Miss Young was her machine-like self once more. "Good night, and thank you for calling Trans America."

Replacing the telephone, Inez remembered something she had noticed coming in. A taxi was parked outside; now she saw the driver. In a yellow, peaked cap, he was at the drug-store soda fountain, in conversation with another man.

A taxi would be costly, but if she was to get to the airport by 11 P.M., it was probably the only means.

Inez crossed to the soda fountain and touched the driver on the arm. "Excuse me."

The cab driver turned. "Yeah, waddya want?" He had a mean, flabby face, and needed a shave.

"I was wondering how much it would cost for a taxi to the airport."

The driver inspected her through narrowed, calculating eyes. "From here, maybe nine, ten dollars on the meter."

Inez turned away. It was too much—more than half the small amount of money she had remaining; and she was not even sure that D.O. would be on the flight.

"Hey, you! Hold it!" The cabbie downed a Coke he had been drinking and hurried after Inez. He caught her at the door. "How much dough ya got?"

"It isn't that." Inez shook her head. "It's just . . . it's more than I can afford."

The cabbie snorted, "Suma you people think ya can get them kinda rides for peanuts. 'S long drag out there."

"Yes. I know."

"Why you wanna go? Whyn't yer get th' bus?"

"It's important; I have to be there . . . ought to be there . . . by eleven o'clock."

"Here," the cab driver said, "maybe it's bargain night. I'll take yer for seven, even."

"Well . . ." Inez still hesitated. Seven dollars was most of what she had planned to offer the apartment landlord tomorrow in an attempt to appease him about the arrears of rent. She would have no wages from the coffee house until the end of next week.

The cab driver said impatiently, "'S th' best offer you'll get. You wanna take it, or not?"

"Yes," Inez said. "Yes, I'll take it."

"Okay, lessgo."

While Inez climbed into the cab unaided, the driver smirked as he used a whisk broom to clear snow from the windshield and windows. When Inez approached him in the drugstore, he was already off duty and, since he lived near the airport, was about to dead-head home. Now, he had a fare. Also, he lied in declaring the meter fare to the airport to be nine or ten dollars; it was actually less than seven. But the lie made it possible to concoct what his passenger believed to be a deal, so now he could drive with his flag up and pocket the seven dollars for himself. High-flagging was illegal, but no cop, the driver reasoned, would be likely to spot him on a lousy night like this.

Thus, the cab driver thought smugly, in a single move he had managed to cheat both this stupid old crone of a passenger and his son-of-a-bitch employer.

As they moved off, Inez asked anxiously, "Are you sure you can get there by eleven o'clock?"

Over his shoulder the driver snarled, "I said so, didn't I, so-lemme do the drivin'."

Just the same, he conceded to himself, he was not certain that they would. The roads were bad, the other traffic slow. They might just make it, but it was going to be close.

Thirty-five minutes later, the taxi containing Inez was crawling tediously along the snowbound, still-plugged Kennedy Expressway. Sitting tensely on the back seat, her fingers working nervously, Inez was wondering how much longer the journey would last.

At the same moment, the airport bus containing the con-

ingent of Flight Two passengers swung on to the departure ramp entrance at Lincoln International. The bus, after shaking itself free from the slow-moving traffic nearer town, had continued to make good time; now, the clock above the terminal showed a quarter to eleven.

As the bus stopped, D. O. Guerrero was first to alight

9

"Bring along that portable public address system," Elliott Freemantle commanded. "We may be glad of it."

The Meadowood community meeting in the Sunday school hall of Meadowood First Baptist Church was swelling with excitement which Lawyer Freemantle had skillfully generated. The meeting was also about to move on to Lincoln International Airport.

"Don't hand me any bilgewater about it being no law or not wanting to go," Elliott Freemantle had entered the residence of six hundred a few minutes earlier. He stood before them confidently, impeccable as ever in his elegant blue spruce suit and gleaming alligator shoes; not a single strand of his styled hair was out of place, and he radiated confidence. The meeting was enthusiastically with him now, and the longer tongued he was, it seemed, the more they liked him.

He continued, "And don't let's have a lot of foolish excuses for not going. I don't want to hear about your mother-in-law left alone, or stays on the phone too long, because I couldn't care less; neither—at this moment—should you. If your car's stuck in the snow, leave it there and ride in someone else's. The point is: I'm going to the airport tonight, on your behalf, to make myself obnoxious." He paused as another aircraft thundered overhead. "By God!—it's time somebody did." The last remark had caused applause and laughter.

"I need your support, and I want you there—all of you. Now I'll ask you a plain, straight question: Are you coming?"

The hall resounded to a roar of, "Yes!" People were on their feet, cheering.

"All right," Freemantle said, and the hall had burst

He had already told them, he pointed out, that legal proceedings must be the basis of any action to gain relief for Meadowood community from its overwhelming airport noise. Such legal proceedings, however, should not be the kind which nobody noticed, or which took place in some out-of-the-way, unpeopled courtroom. Instead, they must be conducted in the spotlight of public attention and public sympathy.

"How do we get that kind of attention and sympathy?" Lawyer Freemantle paused, then answered his own question.

"We get it by making our point of view known in such a way that it becomes newsworthy. Then, and only then, can the attention-getting media—press, radio, and television—feature our viewpoint prominently, in the kind of way we want."

The press were good friends, he declared. "We do not ask them to share our point of view, merely to report it fairly, which—in my experience—they always do. But it helps our reporter friends if a cause can engender some drama; that way, they get a better story."

The three reporters at the press table were grinning as Freemantle added, "We'll see if we can stage some drama for them tonight."

While Elliott Freemantle was speaking, he was also observing shrewdly the progress of the legal forms, retaining himself as legal counsel for individual homeowners, which were now circulating through the hall. Many of the forms—at least a hundred, he estimated—had been signed and passed forward. He had watched ballpoint pens appear, husbands and wives bend over the documents to sign jointly, thus committing each family to payment of a hundred dollars. Lawyer Freemantle did some happy calculation: a hundred completed retainers meant ten thousand dollars for himself. Not a bad fee for—so far—an evening's work, and in the end the total fee would be a great deal more.

While the forms were still circulating, he decided, he would continue talking for a few minutes longer.

As to what was going to happen at the airport tonight, he instructed his listeners, they were to leave that to him. He hoped there would be a confrontation with the airport's management; in any case, he intended to stage a demonstration—within the airport terminal—which people would remember.

"All I ask is that you stay together and that you raise your voices only when I tell you."

Emphatically, he cautioned, there would be no disorder. No one must be able to say next day that the Meadowood anti-noise delegation violated any law.

"Of course"—Freemantle smiled suggestively—"we may get in the way and cause some inconvenience; I understand that the airport is extremely busy tonight. But we can't help that."

There was laughter again. He sensed that people were ready to go.

Still another aircraft reverberated overhead, and he waited until the sound had died.

"Very well! Let us be on our way!" Lawyer Freemantle raised his hands like a jet-age Moses, and mixquoted: "For I have promises to keep, with much ado before I sleep."

The laughter changed to renewed cheering, and people began moving toward the doors.

It was then that he had noticed the portable p.a. system, borrowed from the Meadowood First Baptist Church, and instructed that it be brought along. Floyd Zanetta, the meeting's chairman—virtually ignored since Elliott Freemantle eclipsed him in attention—hurried to comply.

Freemantle himself was stuffing signed retainer forms into his briefcase. A quick count showed that he had underestimated earlier—there were over a hundred and sixty forms, or more than sixteen thousand dollars' worth of collectible fees. In addition, many who had come forward to shake his hand within the past few minutes, assured him they would mail their own forms, along with checks, in the morning. Lawyer Freemantle glowed.

He had no real plan as to what would happen at the airport, any more than he had arrived tonight with a fixed idea about how to take over this meeting. Elliott Freemantle disliked fixed ideas. He preferred to improvise, to get situations rolling, then direct them this way or that, to his own advantage. His freewheeling methods had worked once already this evening; he saw no reason why they should not do so again.

The main thing was to keep these Meadowood homeowners convinced that they had a dynamic leader who would eventually produce results. Furthermore, they must remain convinced until the four quarterly payments, which the retainer agreements called for.

Elliott Freemantle had his money in the bank, the opinions were less important.

So he had to keep this situation lively, he reasoned, for ten or eleven months—and he would do it. He would give these people all the dynamism they could want. There would be need for some more meetings and demonstrations like tonight's because those made news. Too often, court proceedings didn't. Despite what he had said a few minutes ago about legal proceedings being a base, any sessions in court were likely to be unspectacular and possibly unprofitable. Of course, he would do his best to introduce some histrionics, though quite a few judges nowadays were wise to Lawyer Freemantle's attention-creating tactics, and curtailed them sternly.

But there were no real problems, providing he remembered—as he always did in these affairs—that the most important factor was the care and feeding of Elliott Freemantle.

He could see one of the reporters, Tomlinson of the *Tribune*, using a pay phone just outside the hall; another reporter was nearby. Good! It meant that downtown city desks were being alerted, and would cover whatever happened at the airport. There would also, if earlier arrangements Freemantle had made worked out, be some TV coverage, too.

The crowd was thinning. Time to go!

10

Near the airport's floodlighted main entrance, the flashing red beacon of the state police patrol car died. The patrol car, which had preceded Joe Patroni from the site of the wrecked tractor-trailer, slowed, and the state trooper at the wheel pulled over to the curb, waving the TWA maintenance chief past. Patroni accelerated. As his Buick Wildcat swept by, Patroni waved his cigar in salutation and honked his horn twice.

Although the last stage of Joe Patroni's journey had been accomplished with speed, over-all it had taken more than three hours to cover a distance—from his home to the airport—which normally took forty minutes. Now, he hoped, he could make good some of the lost time.

Fighting the snow and slippery road surface, he cut swiftly

time without lighting it, and descended from the truck cab. On the way out from the hangar he had changed from the overshoes he had been wearing into heavy fleece-lined boots; high as the boots were, the deep snow came over them.

Patroni pulled his own parka around him and nodded to Ingram. The two men knew each other slightly.

"Okay," Patroni said; he had to shout to make himself heard above the wind. "Gimme the poop."

As Ingram made his report, the wings and fuselage of the stalled Boeing 707 loomed above them both, like an immense ghostly albatross. Beneath the big jet's belly a red hazard light still winked rhythmically, and the collection of trucks and service vehicles, including a crew bus and roaring power cart, remained clustered on the taxiway side of the aircraft.

The Aéreo-Mexican maintenance foreman summarized what had been done already: the removal of passengers, and the first abortive attempt to get the airplane moving under its own power. Afterward, he informed Joe Patroni, as much weight had been taken off as possible—freight, mail, baggage, with most of the fuel load being sucked out by tankers. Then there had been a second attempt to blast the airplane out, again with its own jets, which also ended in failure.

Chewing his cigar instead of smoking it—one of Patroni's rare concessions to fire precaution, since the smell of aviation kerosene was strong—the TWA maintenance chief moved closer to the aircraft. Ingram followed, and the two were joined by several ground crewmen who emerged from the shelter of the crew bus. As Patroni surveyed the scene, one of the crewmen switched on portable floodlights which were rigged in a semicircle in front of the airplane's nose. The lights revealed that the main landing gear was partially out of sight, embedded in a covering of black mud beneath snow. The aircraft had stuck in an area which was normally grass-covered, a few yards off runway three zero, near an intersecting taxiway—the taxiway which the Aéreo-Mexican pilot had missed in the dark and swirling snow. It was sheer bad luck. Patroni realized, that at that point the ground must have been so waterlogged that not even three days of snow and freezing temperatures had been sufficient to harden it. As a result, the two attempts to blast the airplane free with its own power had merely succeeded in settling it deeper. Now, nacelles of the four jet engines beneath the wings were uncomfortably close to ground level.

Ignoring the snow, which swirled about him like a scene from *South with Scott*, Patroni considered, calculating the possibilities of success.

There was still a worthwhile chance, he decided, of getting the airplane out by use of its own engine power. It would be the fastest way, if it could be done. If not, they would have to employ giant lifting bags—eleven altogether, made of nylon fabric—placed under wings and fuselage, and inflated by pneumatic blowers. When the bags were in place, heavy-duty jacks would be used to raise the aircraft's wheels, then a solid floor built under them. But the process would be long, difficult, and wearying. Joe Patroni hoped it could be avoided.

He announced, "We gotta dig deep and wide in front of the gear. I want two six-foot-wide trenches down to where the wheels are now. Coming forward from the wheels, we'll level the trenches at first, then slope 'em up gradually." He swung to Ingram. "That's a lot of digging."

The foreman nodded. "Sure is."

"When we've finished that part, we'll start the engines and pull full power with all four." Patroni motioned to the stalled, silent aircraft. "That should get her moving forward. When she's rolling, and up the slope of the trenches, we'll swing her this way." Stomping with the heavy boots he had put on in the truck, he traced an elliptical path through the snow between the soft ground and the taxiway paved surface. "Another thing—let's lay big timbers, as many as we can, in front of the wheels. You got any at all?"

"Some," Ingram said. "In one of the trucks."

"Unload 'em, and send your driver around the airport to round up as many as he can. Try all the airlines, and airport maintenance."

The ground crewmen nearest Patroni and Ingram hailed others, who began scrambling from the crew bus. Two of the men rolled back a snow-covered tarpaulin on a truck containing tools and shovels. The shovels were passed around among figures, moving and shadowy outside the semicircle of bright lights. The blowing snow, at times, made it difficult for the men to see each other. They waited for orders to begin.

A boarding ramp, leading to the forward cabin door of the 707, had been left in place. Patroni p
the flyboys still aboard?"

Ingram grunted. "They're aboard. The goddam captain and first officer."

Patroni looked at him sharply. "They been giving you trouble?"

"It wasn't what they gave me," Ingram said sourly, "it's what they wouldn't. When I got here, I wanted 'em to pull full power, the way you just said. If they'd done it the first time, I reckon she'd have come out; but they didn't have the guts, which is why we got in deeper. The captain's made one big screwup tonight, and knows it. Now he's scared stiff of standing the ship on its nose."

Joe Patroni grinned. "If I were him, I might feel the same way." He had chewed his cigar to shreds; he threw it into the snow and reached inside his parka for another. "I'll talk to the captain later. Is the interphone rigged?"

"Yeah."

"Call the flight deck, then. Tell 'em we're working, and I'll be up there soon."

"Right." As he moved closer to the aircraft, Ingram called to the twenty or so assembled ground crewmen, "Okay, you guys; let's get digging!"

Joe Patroni seized a shovel himself and, within minutes, the group was shifting mud, earth, and snow.

When he had used the fuselage interphone to speak to the pilots in their cockpit high above, Ingram—with the aid of a mechanic—began groping through icy mud, with cold numbed hands, to lay the first of the timbers in front of the aircraft's wheels.

Across the airfield occasionally, as the snow gusted and limits of visibility changed, the lights of aircraft taking off and landing could be seen, and the whine-pitched roar of jet engines was carried on the wind to the ears of the men working. But close alongside, runway three zero remained silent and deserted.

Joe Patroni calculated: It would probably be an hour before the digging would be complete and the Boeing 707's engines could be started in an attempt to taxi the big airliner out. Meanwhile, the men now excavating the twin trenches, which were beginning to take shape, would have to be relieved in shifts, to warm themselves in the crew bus, still parked on the taxiway.

It was ten-thirty now. With luck, he thought, he might be home in bed—with Marie—soon after midnight.

He remained silent while their coffee and tea was set before them, then protested, "For God's sake, Gwen, let's be serious about this."

"Why should we be? Especially if I'm not. After all, if anyone's worrying, it ought to be me."

He was about to object again when Gwen reached for his hand under the table. Her expression changed to sympathy. "I'm sorry. I suppose it really is a bit shattering—for both of us."

It was the opening Demerest had been waiting for. He said carefully, "It needn't be shattering. What's more, we don't have to be parents unless we choose to be."

"Well," Gwen said matter-of-factly, "I was wondering when you'd get around to it." She snapped her compact closed, and put it away. "You almost did in the car, didn't you? Then thought better of it."

"Thought better of what?"

"Oh really, Vernon! Why pretend? We both know perfectly well what it is you're talking about. You want me to have an abortion. You've been thinking about it ever since I told you I was pregnant. Well, haven't you?"

He nodded reluctantly. "Yes." He still found Gwen's directness disconcerting.

"What's the matter? Did you think I'd never heard about abortions before?"

Demerest glanced over his shoulder, wondering if they could be overheard, but the clatter of the coffee shop, the buzz of conversation generally, were all-pervading.

"I wasn't sure how you'd feel."

"I'm not sure either." It was Gwen's turn to be serious. She was looking down at her hands, the long slender fingers he admired so much now clasped in front of her. "I've thought about it. I still don't know."

He felt encouraged. At least there was no slammed door, no blank refusal.

He tried to make himself the voice of reason. "It's really the only sensible thing to do. Maybe in some ways it's unpleasant to think of, but at least it's over quickly, and if it's done properly, therapeutically, there's no danger involved, no fear of complications."

"I know," Gwen said. "It's all terribly simple. Now you have it; now you don't." She looked at him directly. "Right?"

"Right."

He sipped his coffee. Perhaps this was going to be easier than he had thought.

"Vernon," Gwen said softly, "have you considered that what's inside me is a human being; that it's alive, a person—even now? We made love. It's us, you and me; a part of us." Her eyes, more troubled than he had yet seen them, searched his face for a response.

He said emphatically, his voice deliberately harsh, "That isn't true. A fetus at this stage is not a human being; nor is it a person, not yet. It could be later, but it isn't now. It doesn't have life or breath or feeling. An abortion—particularly this soon—isn't the same as taking a human life."

Gwen reacted with the same quick temper she had shown in the car on their way to the airport. "You mean it might not be such a good thing later on? If we waited, then had an abortion, it might not be so ethical when the baby was perfectly formed, its fingers and toes all there. To kill it then might be a little worse than now. Is that it, Vernon?"

Demerest shook his head. "I didn't say that."

"But you implied it."

"If I did, I didn't mean to. In any case, you're twisting words around."

Gwen sighed. "I'm being womanly."

"No one's more entitled to be." He smiled; his eyes moved over her. The thought of Naples, with Gwen . . . a few hours from now . . . still excited him.

"I do love you, Vernon. I really do."

Under the table he retrieved her hand. "I know. It's why this is hard for us both."

"The thing is," Gwen said slowly, as if thinking aloud. "I've never conceived a child before, and until it happens a woman always wonders if she can. When you find out, as I have, that the answer's yes, in a way it's a gift, a feeling . . . that only a woman knows . . . that's great and wonderful. Then suddenly in our kind of situation, you're faced with ending it all, of squandering what was given." Her eyes were misty. "Do you understand, Vernon? Really understand?"

He answered gently, "Yes, I think so."

"The difference between you and me is that you've had a child."

He shook his head. "I've no children. Sarah and I . . ."

"Not in your marriage. But there was a child, you told me

so. A little girl; the one from the 3-PPP Program"—Gwen gave the ghost of a smile—"who was adopted. Now, whatever happens there's always someone, somewhere, that's you again."

He remained silent.

Gwen asked, "Do you ever think about her? Don't you ever wonder where she is, what she's like?"

There was no reason to lie. "Yes," he said. "Sometimes I do."

"You've no means of finding out?"

He shook his head. He had once inquired, but was told that when an adoption was sealed, they threw away the files. There was no way to know—ever.

Gwen drank from her teacup. Over its rim she surveyed the crowded coffee shop. He sensed that her composure had returned; the trace of tears was gone.

She said with a smile, "Oh dear, what a lot of trouble I'm causing you."

He answered, and meant it: "It isn't my worrying that matters. It's what's best for you."

"Well, I suppose in the end I'll do what's sensible. I'll have an abortion. I just have to think it through, talk it out, first."

"When you're ready, I'll help. But we shouldn't lose much time."

"I suppose not."

"Look, Gwen," he assured her, "the whole thing is fast, and I promise you it'll be medically safe." He told her about Sweden; that he would pay whatever the clinic cost; that the airline would cooperate in getting her there.

She acknowledged, "I'll make up my mind, for sure, before we get back from this trip."

He picked up their check, and they rose to leave. It was nearing time for Gwen to be on hand to greet passengers boarding Flight Two.

As they left the coffee shop, she said, "I guess I'm pretty lucky you're the way you are. Some men would have walked away and left me."

"I won't leave you."

But he *would* leave her; he knew that now. When Naples and the abortion were over, he would finish with Gwen, break off their affair—as considerately as he could, but completely and definitely just the same. It would not be too difficult.

There might be an uncomfortable moment or two when Gwen learned of his intention, but she was not the kind to make a fuss; she had demonstrated that already. In any event, he could handle the situation, which would not be a new one. Vernon Demerest had disentangled himself successfully from amorous affairs before.

It was true that this time there was a difference. No one before had ever had quite the same effect on him as Gwen. No other woman had stirred him quite so deeply. No one else—at least, whom he remembered—had caused him to enjoy her company, just being with her, quite so much. Parting, for himself, would not be easy, and he knew he would be tempted, later on, to change his mind.

But he would not. Through all his life so far, once he had decided on a course of action, Vernon Demerest had seen it through. Self-discipline was a habit he enforced.

Besides, commonsense told him that if he did not break with Gwen soon, the time might come when he could not when—self-discipline or not—he could never bring himself to give her up. If that happened, it would entail a need for permanence and, along with that, the kind of catastrophic upheaval—marital, financial, emotional—which he was determined to avoid. Ten or fifteen years ago, maybe; not now.

He touched Gwen's arm. "You go on. I'll follow in a minute."

Ahead of them, as the crowds in the central concourse parted briefly, he had observed Mel Bakersfeld. Vernon Demerest had no particular objection to being seen with Gwen; just the same, there was no sense in advertising their relationship around the family.

His brother-in-law, he noticed, was talking animatedly with Lieutenant Ned Ordway, the efficient, amiable Negro who commanded the airport police detachment. Perhaps Mel would be too absorbed to notice his sister's husband, which was perfectly all right with Demerest, who had no particular wish for a meeting, though at the same time he had no intention of avoiding one.

Gwen disappeared into the crowd in the glimpse of her was of shapely, nylon-sheathed legs and white stockings, attractive and proportionate. *O Sole Mio* . . .

Damn! Mel Bakersfeld had seen him.

"I was looking for you," *Lieutenant* . . .

a few minutes earlier. "I've just heard we're having visitors—several hundred."

Tonight the airport police chief was in uniform; a tall, striking figure who looked like an African emperor, though for one so big, he spoke with surprising softness.

"We already have visitors." Mel glanced around the crowded, bustling concourse. He had been passing through on the way to his office on the executive mezzanine. "Not hundreds; thousands."

"I don't mean passengers," Ordway said. "The ones I'm talking about may cause us more trouble."

He told Mel about the Meadowood mass meeting to protest airport noise; now the meeting had adjourned and most of its members were on their way to the airport. Lieutenant Ordway had learned about the meeting, and its intended follow-up, from a TV news crew which had requested permission to set up cameras inside the terminal. After talking with the TV people, Ordway telephoned a friend on the *Tribune* city desk downtown, who read him the gist of a news story which a reporter at the original meeting had just phoned in.

"Hell!" Mel grumbled. "Of all the nights to choose! As if we don't have enough trouble already."

"I guess that's the idea; they'll get noticed more that way. But I thought you'd better be warned because they'll probably want to see you, and maybe someone from the FAA."

Mel said sourly, "The FAA goes underground when they hear of something like this. They never come out until the all clear's sounded."

"How about you?" The policeman grinned. "You plan to start tunneling?"

"No. You can tell them I'll meet a delegation of half a dozen, though even that's a waste of time tonight. There's nothing I can do."

"You realize," Ordway said, "that providing they don't create a disturbance or damage property, there's nothing I can do legally to keep the rest of them out."

"Yes, I realize it, but I'm not going to talk to a mob, though just the same, let's not look for trouble. Even if we get pushed around a little, make sure we don't do any pushing ourselves unless we have to. Remember that the press will be here, and I don't want to create any martyrs."

"I already warned my men. They'll make with the jokes and save the jujitsu."

"Good!"

Mel had confidence in Ned Ordway. The policing of Lincoln International was handled by a self-administering detachment of the city force, and Lieutenant Ordway represented the best type of career policeman. He had been in charge of the airport police detail a year, and would probably move on to a more important assignment downtown soon. Mel would be sorry to see him go.

"Apart from this Meadowood thing," Mel inquired, "how's everything else been?" He was aware that Ordway's force of a hundred policemen, like most others at the airport, had done extra hours of duty since the storm began.

"Mostly routine. More drunks than usual, and a couple of fist fights. But that figures because of all the flight delays and your busy bars."

Mel grinned. "Don't knock the bars. The airport takes a percentage from every drink, and we need the revenue."

"So do airlines, I guess. At least judging by the passengers they try to sober up, so they can put them aboard. I have my usual beef about that."

"Coffee?"

"Right. The moment a passenger in his cups shows up at an airline check-in counter, somebody from passenger relations gets assigned to pour coffee into him. Airlines never seem to learn that when the coffee's in, all you have is a wide-awake drunk. Mostly, that's when they call us."

"You can handle it."

Ordway's men, Mel was aware, were expert at dealing with airport drunks, who were rarely charged unless they became obstreperous. Mostly they were salesmen and businessmen from out of town, sometimes exhausted after a grueling, competitive week, whom a few drinks on the way home hit hard. If flight crews wouldn't allow them aboard—and captains, who had the last word on such matters, were usually adamant about it—the drunks were escorted to the police detention building and left to sober up. Later, they were allowed to go—usually sheepishly.

"Oh, there is one thing," the police chief said. "The parking lot people think we have several more dumped cars. In this weather it's hard to be sure, but we'll check it out as soon as we can."

Mel grimaced. Worthless cars abandoned on parking lots were currently a plague at every big city airport. Nowadays

when an old jalopy became useless, it was surprisingly hard to get rid of it. Scrap and salvage dealers were jammed to the limits of their yards and wanted no more—unless car owners paid. So an owner was faced with the alternatives of paying for disposal, renting storage, or finding a place to abandon his vehicle where it could not be traced back to him. Airports had become obvious dumping grounds.

The old cars were driven into airport parking lots, then license plates and other obvious identification quietly removed. Engine serial numbers could not be removed, of course, but the time and trouble involved in tracing them was never worth while. It was simpler for the airport to do what the ex-owner would not—pay for the car to be taken away and junked, and as quickly as possible since it was occupying revenue parking space. Recently, at Lincoln International, the monthly bill for old car disposal had become formidable.

Through the shifting throng in the concourse, Mel caught sight of Captain Vernon Demerest.

"Aside from that," Ordway said genially, "we're in great shape for your Meadowood visitors. I'll let you know when they get here." With a friendly nod, the policeman moved on.

Vernon Demerest—in Trans America uniform, his bearing confident as usual—was coming Mel's way. Mel felt a surge of irritation, remembering the adverse snow committee report which he had heard about, but still hadn't seen.

Demerest seemed disinclined to stop until Mel said, "Good evening, Vernon."

"Hi." The tone was indifferent.

"I hear that you're an authority, now, on snow clearance."

"You don't have to be an authority," Vernon Demerest said brusquely, "to know when there's a lousy job being done."

Mel made an effort to keep his tone moderate. "Have you any idea how much snow there's been?"

"Probably better than you. Part of my job is studying weather reports."

"Then you're aware we've had ten inches of snow on the airport in the past twenty-four hours; to say nothing of what was there already."

Demerest shrugged. "So clear it."

"It's what we're doing."

"Goddamned inefficiently."

"The maximum recorded snowfall here—ever," Mel persisted, "was twelve inches in the same period. That was an

undation, and everything closed down. This time we've come near to it, but we haven't closed. We've fought to stay open, and we've managed it. There isn't an airport anywhere that could have coped better than we have with this storm. We've had every piece of snow-moving machinery manned round the clock."

"Maybe you haven't got enough machinery."

"Good God, Vernon! Nobody has enough equipment for the kind of storm we've had these past three days. Anybody could use more, but you don't buy snow-clearing machinery for occasional maximum situations—not if you've any economic sense. You buy for optimums, then when an emergency hits you, you use everything you have, deploying it to best advantage. That's what my men have been doing, and they've done damned well!"

"Okay," Demerest said, "you have your opinion, I have mine. I happen to think you've done an incompetent job. I've said so in my report."

"I thought it was a committee report. Or did you elbow the others out so you could take a personal stab at me?"

"How the committee works is our business. The report is what matters. You'll get your copy tomorrow."

"Thanks a lot." His brother-in-law, Mel noticed, had not bothered to deny that the report was directed personally. Mel went on, "Whatever it is you've written won't change anything, but if it gives you satisfaction, it'll have a nuisance value. Tomorrow I'll have to waste time explaining how ignorant—in some areas—you really are."

Mel had spoken heatedly, not bothering to conceal his anger, and for the first time Demerest grinned. "Got under your skin a little, eh? Well, that's too bad about the nuisance value and your precious time. I'll remember it tomorrow while I'm enjoying Italian sunshine." Still grinning, he walked away.

He had not gone more than a few yards when the grin changed to a scowl.

The cause of Captain Demerest's displeasure was the central lobby insurance booth—tonight, clearly doing a brisk business. It was a reminder that Demerest's victory over Mel Bakersfeld had been picayune, a pinprick only. A week from now, the adverse snow committee report would be forgotten, but the insurance counter would still be here. So the real victory was still with his smooth, smug brother-in-law, who

had defeated Demerest's arguments in front of the Board of Airport Commissioners, and made him look a fool.

Behind the insurance counters two young girls—one of them the big-breasted blonde—were rapidly writing policies for applicants, while another half dozen people waited in line. Most of those waiting were holding cash in their hands—representing more quick profits for the insurance companies, Demerest reflected sourly—and he had no doubt the automatic vending machines in various locations in the terminal were just as busy.

He wondered if any of his own Flight Two passengers-to-be were among those in line. He was tempted to inquire and, if so, do some proselytizing of his own; but he decided not. Vernon Demerest had tried the same thing once before—urging people at an insurance counter not to buy airport flight insurance, and telling them why; and afterward there had been complaints, resulting in a sharply worded reprimand to him from Trans America management. Though airlines did not like airport insurance vending any more than aircrews did, the airlines were subject to differing pressures which forced them to stay neutral. For one thing, airport managements claimed they needed the insurance companies' revenue; if they didn't get it from that source, they pointed out, maybe the airlines would have to make up the difference in higher landing fees. For another, airlines were not eager to offend passengers, who might resent not being able to buy insurance in a way they had become used to. Therefore the pilots alone had taken the initiative—along with the abuse.

Preoccupied with his thoughts, Captain Demerest had paused for a few seconds, watching the insurance booth activity. Now he saw a newcomer join the queue—a nervous-looking man—spindly and stoop-shouldered, and with a small, sandy mustache. The man carried a small attaché case and seemed to be worrying about the time; he cast frequent glances at the central lobby clock, comparing it with his own watch. He was clearly unhappy about the length of the line-up ahead of him.

Demerest thought disgustedly: the man had left himself with too little time; he should forget about insurance and get aboard his flight.

Then Demerest reminded himself: he should be back on the flight deck of Flight Two. He began to walk quickly toward the Trans America departure concourse; at any

pushed the buttons in appropriate sequence; after that the machinery took over.

Almost all flight announcements—the exceptions were those for special situations—were pre-recorded on cartridge tapes. Although, to the ear, each announcement seemed complete in itself, it never was, for it consisted of three separate recordings. The first recording named the airline and flight; the second described the loading situation, whether preliminary, boarding, or final; the third recording specified gate number and concourse. Since the three recordings followed one another without a pause, they sounded—as they were intended to—continuous.

People who disliked quasi-human automation were sometimes cheered when flight announcement machines went wrong. Occasionally part of the machinery would jam, with such results as passengers for half a dozen flights being misdirected to the same gate. The resultant debacle, involving a thousand or more confused, impatient passengers, was an airline agent's nightmare.

Tonight, for Flight Two, the machinery worked.

"... passengers holding confirmed reservations please proceed to gate forty-seven, the Blue Concourse 'D'."

By now, thousands in the terminal had heard the announcement of Flight Two. Some who heard were more concerned than others. A few, not yet concerned, would be, before the night was done.

More than a hundred and fifty Flight Two passengers heard the announcement. Those who had checked in, but had not reached gate forty-seven, hastened toward it, a few recent arrivals still knocking snow from their clothing as they went.

Senior Stewardess Gwen Meighen was pre-boarding several families with small children when the announcement echoed down the boarding walkway. She used the flight deck interphone to notify Captain Anson Harris, and prepared herself for an influx of passengers within the next few minutes. Ahead of the passengers, Captain Vernon Demerest ducked aboard and hurried forward, closing the flight deck door behind him.

Anson Harris, working with Second Officer Cy Jordan, had already begun the pre-flight check.

"Okay," Demerest said. He slipped into the first officer's righthand seat, and took the check list clipboard. Jordan returned to his regular seat behind the other two.

Mel Bakersfeld, still in the central concourse, heard the announcement and remembered that *The Golden Argosy* was Vernon Demerest's flight. Mel genuinely regretted that once again an opportunity to end, or even lessen, the hostility between himself and his brother-in-law had ended in failure. Now, their personal relationship was—if possible—worse than before. Mel wondered how much of the blame was his own; some, certainly, because Vernon seemed to have a knack for probing out the worst in Mel, but Mel honestly believed that most of their quarrel was of Vernon's making. Part of the trouble was that Vernon saw himself as a superior being, and resented it when others didn't. A good many pilots whom Mel knew—especially captains—felt that way about themselves.

Mel still seethed when he remembered Vernon, after the airport commissioners' meeting, asserting that people like Mel were "ground-bound, desk-tied, with penguins' minds." As if flying an airplane, Mel thought, were something so damned extra-special compared with other occupations!

Just the same, Mel wished that tonight for a few hours he was a pilot once again, and was about to leave—as Vernon was leaving—on a flight for Rome. He remembered what Vernon had said about enjoying Italian sunshine tomorrow. Mel could do with a little of that, a little less, at this moment, of aviation's logistics of the ground. Tonight the surly bonds of earth seemed surlier than usual.

Police Lieutenant Ned Ordway, who had left Mel Bakersfeld a few minutes earlier, heard the announcement of Flight Two through the opened doorway of a small security office just off the main concourse. Ordway was in the office receiving a telephoned report from his desk sergeant at airport police headquarters. According to a radio message from a patrol car, a heavy influx of private automobiles, crammed with people, was coming into the parking lots, which were having difficulty accommodating them. Inquiries had revealed that most of the cars' occupants were from Meadowood community—members of the anti-~~_____~~ demonstration which Lieutenant Ordway had already ~~_____~~ about. As

lieutenant's orders, the desk sergeant said, police reinforcements were on their way to the terminal.

A few hundred feet from Lieutenant Ordway, in a passenger waiting area, the little old lady from San Diego, Mrs. Ada Quonsett, paused in her conversation with young Peter Coakley of Trans America, while both listened to the announcement of Flight Two.

They were seated, side by side, on one of a series of black, leather padded benches. Mrs. Quonsett had been describing the virtues of her late husband in the same kind of terms which Queen Victoria must have used when speaking of Prince Albert. "Such a dear person, so very wise, and handsome. He came to me in later life, but I imagine, when he was young, he must have been very much like you."

Peter Coakley grinned sheepishly, as he had done many times in the past hour and a half. Since leaving Tanya Livingston, with instructions to remain with the old lady stowaway until the departure of her return flight for Los Angeles, their talk had consisted chiefly of a monologue by Mrs. Quonsett in which Peter Coakley was compared frequently and favorably with the late Herbert Quonsett. It was a subject of which Peter was becoming decidedly weary. He was unaware that that was what Ada Quonsett astutely intended.

Surreptitiously, Peter Coakley yawned; this was not the kind of work he had expected when he became a Trans America passenger agent. He felt an absolute fool, sitting here in uniform, playing dry nurse to a harmless, garrulous old dame who could have been his great-grandmother. He hoped this duty would be over soon. It was bad luck that Mrs. Quonsett's flight to Los Angeles, like most others tonight, was being further delayed by the storm; otherwise the old girl would have been on her way an hour ago. He hoped to goodness that the L.A. flight would be called soon. Meanwhile, the announcement about Flight Two, which was continuing, made a welcome, if brief, respite.

Young Peter Coakley had already forgotten Tanya's cautioning words: "Remember . . . she's got a barrelful of tricks."

"Fancy that!" Mrs. Quonsett said when the announcement ended. "A flight to Rome! An airport is so interesting, don't you think, especially for a young, intelligent person like you? Now there was a place—Rome—which my late, dear husband

moved, hovering near the top of her old-fashioned, high-necked blouse. She dabbed at her mouth with the lace handkerchief and emitted a soft, low moan.

A look of alarm sprang to the young ticket agent's face. "What is it, Mrs. Quonsett? What's wrong?"

Her eyes closed, then opened; she gave several short gasps. "I'm so sorry. I'm afraid I don't feel at all well."

Peter Coakley inquired anxiously, "Do you want me to get help? A doctor?"

"I don't want to be a nuisance."

"You won't be . . ."

"No." Mrs. Quonsett shook her head weakly. "I think I'll just go to the ladies' room. I expect I'll be all right."

The young ticket agent appeared doubtful. He didn't want the old girl dying on him, though she looked ready for it. He asked uneasily, "Are you sure?"

"Yes, quite sure." Mrs. Quonsett decided she didn't want to attract attention here, not in the main part of the terminal. There were too many people nearby who would be watching. "Please help me up . . . thank you . . . now, if you'll just give me your arm . . . I believe the ladies' room is over there." On the way, she threw in a couple of low moans, producing anxious glances from Peter Coakley. She reassured him, "I've had an attack like this before. I'm sure I'll feel better soon."

At the door to the women's room she released young Coakley's arm. "You're very kind to an old lady. So many young people nowadays . . . Oh, dear! . . ." She cautioned herself: that was enough; she must be careful not to overdo it. "You'll wait here for me? You won't go away?"

"Oh, no. I won't go."

"Thank you." She opened the door and went in.

There were twenty or thirty women inside; everything at the airport was busy tonight, Mrs. Quonsett thought, including washrooms. Now she needed an ally. She looked the field over carefully before selecting a youngish secretary-type woman in a beige suit, who didn't seem in a hurry. Mrs. Quonsett crossed to her.

"Excuse me, I'm not feeling very well. I wonder if you'd help me." The little old lady from San Diego fluttered her hands and closed and opened her eyes, as she had for Peter Coakley.

The younger woman was concerned at once. "Of course I'll help. Would you like me to take you . . ."

"No . . . please." Mrs. Quonsett leaned against a washbasin, apparently for support. "All I want is to send a message. There's a young man outside the door in airline uniform—Trans America. His name is Mr. Coakley. Please tell him . . . yes, I would like him to get a doctor after all."

"I'll tell him. Will you be all right until I get back?"

Mrs. Quonsett nodded. "Yes, thank you. But you will come back . . . and tell me."

"Of course."

Within less than a minute the younger woman had returned. "He's sending for a doctor right away. Now, I think you should rest. Why don't . . ."

Mrs. Quonsett stopped leaning on the basin. "You mean he's already gone?"

"He went immediately."

Now all she had to do, Mrs. Quonsett thought, was get rid of this woman. She closed and opened her eyes again. "I know it's asking a great deal . . . you've already been so good . . . but my daughter is waiting for me by the main door, near United Air Lines."

"You'd like me to get her for you? Bring her here?"

Mrs. Quonsett touched the lace handkerchief to her lips. "I'd be so grateful, though really it's an imposition."

"I'm sure you'd do as much for me. How will I know your daughter?"

"She's wearing a long mauve coat and a small white hat with yellow flowers. She has a little dog—a French poodle."

The secretary-type woman smiled. "That should be easy. I won't be long."

"It is so good of you."

Ada Quonsett waited only a moment or two after the woman had gone. Mrs. Quonsett hoped, for her temporary helper's sake, she did not spend too much time searching for an imaginary figure in a mauve coat, accompanied by a nonexistent French poodle.

Smiling to herself, the little old lady from San Diego left the washroom, walking spryly. No one accosted her as she moved away and was absorbed in the surging terminal crowds.

Now, she thought, which was the way to the Blue Concourse "D," and gate forty-seven?

To Tanya Livingston, the Flight Two announcement was

like a scoreboard change at a quadruple-header ball game. Four Trans America flights were, at the moment, in various stages of departure; in her capacity as passenger relations agent, Tanya was liaising with them all. As well, she had just had an irritating session with a passenger from an incoming flight from Kansas City.

The aggressive, fast-talking passenger complained that his wife's leather traveling case, which appeared on the arrivals carousel with a rip in its side, had been damaged as a result of careless handling. Tanya did not believe him—the rip looked like an old one—but, as Trans America and other airlines invariably did, she offered to settle the claim on the spot, for cash. The difficulty had been in arriving at an agreeable sum. Tanya offered thirty-five dollars, which she considered to be more than the bag's value; the passenger held out for forty-five. Finally they settled at forty dollars, though what the complainant didn't know was that a passenger relations agent had authority to go to sixty dollars to get rid of a nuisance claim. Even when suspecting fraud, airlines found it cheaper to pay up quickly than enter into a prolonged dispute. In theory, ticket agents were supposed to note damaged bags at check-in, but seldom did; as a result, passengers who knew the ropes sometimes replaced worn-out luggage in that way.

Though the money was not her own, Tanya always hated parting with it when, in her opinion, the airline was being cheated.

Now, she turned her attention to helping round up stragglers for Flight Two, some of whom were still coming in. Fortunately, the bus with downtown check-ins had arrived several minutes earlier, and most of its passengers had by now been directed to Concourse "D," gate forty-seven. In a minute or two, Tanya decided, in case there were any last-minute passenger problems during boarding, she would go to gate forty-seven herself.

D. O. Guerrero heard the announcement of Flight Two while in line at the insurance counter in the terminal central concourse.

It was Guerrero, appearing hurried and whom Captain Vernon Demerest had seen arrive carrying his small attaché case which contained the bomb.

Guerrero had come directly from the b irance

counter, where he was now fifth in line. Two people at the head of the line were being dealt with by a pair of clerks who were working with maddening slowness. One of the clerks—a heavy-chested blonde in a low-cut blouse—was having a prolonged conversation with her present customer, a middle-aged woman. The clerk was apparently suggesting that the woman take out a larger policy than had been asked for; the woman was being indecisive. Obviously, it would take at least twenty minutes for Guerrero to reach the head of the line, but by then Flight Two would probably be gone. Yet he had to buy insurance; he had to be insured.

The p.a. announcement had said that the flight was being boarded at gate forty-seven. Guerrero should be at the gate now. He felt himself trembling. His hands were clammy on the attaché case handle. He checked his watch again, for the twentieth time, comparing it with the terminal clock. Six minutes had gone by since the announcement of Flight Two. The final call . . . the airplane doors closing . . . would come at any moment. He would have to do something.

D. O. Guerrero pushed his way roughly to the head of the line. He was past caring about being noticed or offending. A man protested. "Hey, buddy, we're waiting now!" Guerrero ignored him. He addressed the big-breasted blonde. "Please . . . my flight has been called—the one to Rome. I need insurance. I can't wait."

The man who had spoken before interrupted. "Then go without. Another time, please."

Guerrero was tempted to storm. There won't be another time. Instead, he addressed himself to the blonde again. "Can you?"

To his surprise the blonde woman, he had been expecting a rebuff. "You did not wait."

"Yes, yes. The flight has called."

"I know. She called again. Trans America Flight Two. It is called The Golden Eagle."

Despite his anxiety, he was aware that the girl had a sexy European accent, probably Hungarian.

D. O. Guerrero made an effort to speak normally. "That's right."

The girl turned her nose on the others who were waiting. "This gentleman really does not have much time. I'm sure you will not mind if I change him now."

So much had gone wrong before that he . . .

AIRPORT

...ve his good luck. There was some muttered grumbling the line of people waiting, but the man who had done the thing until now was silent. The girl produced an insurance application form. She came at the woman she had been dealing with. "This will only take a moment." Then she turned her smile again on D. O. Guerrero.

For the first time he realized how effective the smile was, and why there had been no real protest from the others. When the girl looked at him directly, Guerrero—who was seldom affected by women—had the feeling he was going to melt. She also had the biggest tits he had ever seen. "My name is Bunnie," the girl said in her European accent. "What is yours?" Her ballpoint pen was poised.

As a vendor of airport flight insurance, Bunnie Vorobioff was a remarkable success. She had come to the United States, not from Hungary as D. O. Guerrero had supposed, but from Glauchau in the southern portion of East Germany, via the Berlin Wall. Bunnie (who was then Gretchen Vorobioff, the homely, first chested daughter of a minor Communist official and a Yugoslav Communist herself) crossed the wall at night with two male companions. The young men were caught by searchlights, shot and killed; their bodies hung for twenty-four hours on barbed wire, in public view. Bunnie avoided the searchlights and small arms fire and survived, survival being a quality which seemed to come to her naturally.

Later, on arrival as a U.S. immigrant at age twenty, she had embraced American free enterprise and its glamour with the enthusiasm of a religious convert. She worked as a hospital aide, in which she had some training, moonlighted as a waitress. Into the remaining time she had crammed a Berlitz course in English, and also managed to get to bed—occasionally to sleep, more often with a book from the hospital. The interns repaid Gretchen's sexual favors by introducing her to silicone breast injections, which she casually and ended by being a joyous group experimenter. She saw just how big her breasts would get. Fortunately, they could become more than gargantuan, she had another new-found freedom by quitting her hospital job to get one with more money. Somewhere along the way she had come to Washington, D.C., and toured the White

the Capitol, and the Playboy Club. After the last, Gretchen further Americanized herself by adopting the name Bunnie.

Now, a year and a half later, Bunnie Vorobioff was totally assimilated. She was in an Arthur Murray dancing class, the Blue Cross and Columbia Record Club, had a charge account at Carson Pirie Scott, subscribed to *Reader's Digest* and *TV Guide*, was buying the *World Book Encyclopedia* on time, owned a wig and a Volkswagen, collected trading stamps, and was on pills.

Bunnie also loved contests of all kinds, especially those which held a hope of tangible reward. Along these lines, a reason she enjoyed her present job more than any other she had had so far, was that periodically her insurance company employers held sales contests for its staff, with merchandise prizes. One such contest was in progress now. It would end tonight.

The contest was the reason why Bunnie had reacted so agreeably when D. O. Guerrero announced that he was on his way to Rome. At this moment Bunnie needed forty more points to win her objective in the present sales contest—an electric toothbrush. For a while tonight she had despaired of completing her total of points before the deadline, since insurance policies she had sold today were mostly for domestic flights; these produced lower premiums and earned fewer contest points. However, if a maximum size policy could be sold for an overseas flight, it would earn twenty-five contest points, bringing the remainder within easy reach. The question was: How big an insurance policy did this Rome passenger want and, assuming it was less than the maximum, could Bunnie Vorobioff sell him more?

Usually she could. Bunnie merely turned on her most sexy smile, which she had learned to use like an instant warming oven, leaned close to the customer so that her breasts bemused him, then announced how much more benefit could be had for an additional small sum of money. Most times the ploy worked and was the reason for Bunnie's success as an insurance saleswoman.

When D. O. Guerrero had spelled out his name, she asked, "What kind of policy were you considering, sir?"

Guerrero swallowed. "Straight life—seventy-five thousand dollars."

Now that he had said it, his mouth was dry. He had a sudden fear that his words had alerted everyone in the

up; their eyes were boring into his back. His entire body was trembling; he was sure it would be noticed. To cover up, he lit a cigarette, but his hand was shaking so much that he had trouble bringing match and cigarette together. Fortunately, the girl, with her pen hovering over the entry "principal sum," appeared not to notice.

Bunnie pronounced, "That would cost two dollars and fifty cents."

"What? . . . Oh, yes." Guerrero managed to light the cigarette, then dropped the match. He reached into his pocket for some of the small amount of money he had remaining.

"But it is quite a tiny policy." Bunnie Vorobioff had still not marked in the principal sum. Now she leaned forward, bringing her breasts nearer to the customer. She could see him looking down at them with fascination; men always did. Some, she sensed at times, wanted to reach out and touch. Not this man, though.

"Tiny?" Guerrero's speech was awkward, halting. "I thought . . . it was the biggest."

Even to Bunnie, the man's nervousness was now apparent. She supposed it was because he would be flying soon. She directed a dazzling smile across the counter.

"Oh no, sir; you could buy a three hundred thousand dollar policy. Most people do, and for just ten dollars premium. Really, it isn't much to pay for all that protection, is it?" She kept her smile switched on; the response could mean a difference of nearly twenty contest points; it might gain or lose her the electric toothbrush.

"You said . . . ten dollars?"

"That's right—for three hundred thousand dollars."

D. O. Guerrero thought: *He hadn't known.* All along, he had believed that seventy-five thousand dollars was the top limit for airport-purchased insurance for an overseas flight. He had obtained the information from an insurance application blank which, a month or two ago, he had picked up at another airport. Now he remembered—the earlier blank came from an automatic vending machine. It had not occurred to him that over-the-counter policies could be that much greater.

Three hundred thousand dollars!

"Yes," he said eagerly. "Please . . . yes."

Bunnie beamed. "The full amount, Mr. Guerrero?"

He was about to nod assent when the supreme irony occurred to him. He probably did not possess ten dollars. He

told Bunnie, "Miss . . . wait!" and began searching his pockets, pulling out whatever money he could find.

The people in line behind were becoming restive. The man who had objected to Guerrero to begin with, protested to Bunnie, "You said he'd just take a minute!"

Guerrero had found four dollars and seventy cents.

Two nights ago, when D. O. Guerrero and Inez had pooled their last remaining money, D. O. had taken eight dollars, plus small change, for himself. After pawning Inez's ring and making the down payment on the Trans America ticket, there had been a few dollars left; he wasn't sure how many, but since then he had paid for meals, subway fares, the airport bus . . . He had known that he would need two and a half dollars for flight insurance, and had kept it carefully in a separate pocket. But beyond that he hadn't bothered, aware that once aboard Flight Two, money would be of no further use.

"If you don't have cash," Bunnie Vorobioff said, "you can give me a check."

"I left my checkbook home." It was a lie; there were checks in his pocket. But if he wrote a check, it would bounce and invalidate the insurance.

Bunnie persisted, "How about your Italian money, Mr. Guerrero? I can take lire and give you the proper rate."

He muttered, "I don't have Italian money," then cursed himself for having said it. *Downtown he had checked in without baggage for a flight to Rome. Now, insanely, he had demonstrated before onlookers that he had no money, either American or Italian. Who would board an overseas flight unequipped and penniless, except someone who knew the flight would never reach its destination?*

Then D. O. Guerrero reminded himself . . . except in his own mind . . . the two incidents—downtown and here—were unconnected. They would not be connected until afterward, and by then it wouldn't matter.

He reasoned, as he had on the way out: It was not the strength of suspicion which was important. The crucial factor would still be the absence of wreckage, the absence of proof.

Surprisingly, despite his latest gaffe, he discovered he was growing more confident.

He added some dimes and pennies to the pile of change on the insurance counter. Then, miraculously, in a inside pocket, he found a five-dollar bill.

Not concealing his excitement, Guerrero exclaimed, "That's it! I have enough!" There was even a dollar or so in small change left over.

But even Bunnie Vorobioff was doubtful now. Instead of writing the three hundred thousand dollar policy which the man was waiting for, she hesitated.

While he had searched his pockets, she had been watching the customer's face.

It was strange, of course, that this man was going overseas without money, but, after all, that was his own business; there could be plenty of reasons for it. What really bothered her was his eyes; they held a hint of frenzy, desperation. Both were qualities which Bunnie Vorobioff recognized from her past. She had seen them in others. At moments—though it seemed long ago—she had been close to them herself.

Bunnie's insurance company employers had a standing instruction: If a purchaser of flight insurance seemed irrational, unusually excited, or was drunk, the fact was to be reported to the airline on which he was traveling. The question for Bunnie was: Was this an occasion to invoke the rule?

She wasn't sure.

The company standing instruction was sometimes discussed, among themselves, by flight insurance sales clerks. Some of the girls resented or ignored it, arguing that they were hired to sell insurance, not to act as unpaid, unqualified psychologists. Others pointed out that many people who bought flight insurance at an airport were nervous to begin with; how could anyone, without special training, decide where nervousness ended and irrationality began? Bunnie herself had never reported a keyed-up passenger, though she knew a girl who had, and the passenger turned out to be an airline vice president, excited because his wife was going to have a baby. There had been all kinds of trouble over *that*.

Still Bunnie hesitated. She had covered her hesitation by counting the man's money on the counter. Now she wondered if Marj, the other clerk working beside her, had noticed anything unusual. Apparently not. Marj was busy writing a policy, earning *her* contest points.

In the end, it was Bunnie Vorobioff's past which swayed her decision. Her formative years . . . occupied Europe, her flight to the West, the Berlin Wall . . . had taught her survival, and conditioned her to something else: to curb curiosity, and not to ask unnecessary questions. Questions had a

way of leading to involvement, and involvement—in other people's problems—was something to be avoided when one had problems of one's own.

Without further questioning, at the same time solving her problem of how to win an electric toothbrush, Bunnie Vorobioff wrote a flight insurance policy, for three hundred thousand dollars, on D. O. Guerrero's life.

Guerrero mailed the policy to his wife, Inez, on his way to gate forty-seven and Flight Two.

13

U. S. Customs Inspector Harry Standish did not hear the announcement of Flight Two's impending departure, but knew it had been made. Flight announcements were not relayed to the Customs Hall, since only international arriving passengers came there, so Standish obtained his information on the telephone, from Trans America Airlines. He had been informed that Flight Two was beginning to load at gate forty-seven and would depart at its rescheduled time of 11 p.m.

Standish was watching the clock and would go to gate forty-seven in a few minutes, not on official business, but to say goodbye to his niece, Judy—his sister's child—who was leaving for a year's schooling in Europe. Standish had promised his sister, who lived in Denver, that he would see Judy off. Earlier this evening, in the terminal, he had spent some time with his niece—a pleasant, self-possessed girl of eighteen—and had said he would drop around for a final goodbye before her flight took off.

Meanwhile, Inspector Standish was trying to clear up a tiresome problem near the end of what had been an exceptionally harassing day.

"Madam," he said quietly to the haughty, angular woman whose several suitcases were spread open on the Customs inspection table between them, "are you quite sure you don't wish to change your story?"

She snapped back, "I suppose you're suggesting I should lie, when I've already told you the truth. Really!—you people are so officious, so disbelieving. I sometimes wonder if we're not living in a police state."

Harry Standish ignored the second remark, as Customs officers were trained to ignore the many insults they received, and answered politely, "I'm not suggesting anything, madam. I merely asked if you wished to amend your statement about these items—the dresses, the sweaters, and the fur coat."

The woman, whose American passport showed that she was Mrs. Harriet Du Barry Mossman who lived in Evanston, and had just returned from a month in England, France, and Denmark, replied acidly, "No, I don't. Furthermore, when my husband's lawyer hears of this interrogation . . ."

"Yes, madam," Harry Standish said. "In that case, I wonder if you'd mind signing this form. If you like, I'll explain it to you."

The dresses, sweaters, and fur coat were spread out on top of the suitcases. Mrs. Mossman had been wearing the coat—a sable jacket—until a few minutes ago when Inspector Standish arrived at Customs inspection station number eleven; he had asked her to take the coat off so that he could look at it more closely. Shortly before that, a red light on a wall panel near the center of the big Customs Hall had summoned Standish. The lights—one for each station—indicated that an inspecting officer had a problem and needed supervisory help.

Now, the young Customs man who had dealt with Mrs. Mossman originally was standing at Inspector Standish's side. Most of the other passengers, who had arrived aboard a Scandinavian Airlines DC-8 from Copenhagen, had cleared Customs and had left. Only this well-dressed American woman posed a problem, insisting that all she had bought in Europe was some perfume, costume jewelry, and shoes. The total declared value was ninety dollars—ten dollars less than the free exemption she was allowed. The young officer had been suspicious.

"Why should I sign anything?" Mrs. Harriet Du Barry Mossman demanded.

Standish glanced at an overhead clock; it was a quarter to eleven. He still had time to finish this and reach Flight Two before it left. He answered patiently, "To make things easier for yourself, madam. We're merely asking you to confirm in writing what you've already told us. You say the dresses were purchased . . ."

"How many times must I tell you? They were bought in Chicago and New York before I left for Europe; so were

the sweaters. The coat was a gift—purchased in the United States. I received it six months ago."

Why, Harry Standish wondered, did people do it? All the statements just made, he knew with certainty, were lies.

To begin with, the dresses—six, all of good quality—had had their labels removed. No one did that innocently; women were usually proud of the labels in quality clothes. More to the point—the workmanship of the dresses was unmistakably French; so was the styling of the fur coat—though a Saks Fifth Avenue label had been sewn unskillfully in the coat lining. What people like Mrs. Mossman failed to realize was that a trained Customs man didn't need to see labels to know where garments originated. Cutting, stitching—even the way a zipper was put in—were like familiar handwriting, and equally distinctive.

The same thing was true of the three expensive sweaters. They also were without labels, and were unmistakably from Scotland, in typical British "drab" shades, not available in the United States. When a U.S. store ordered similar sweaters, the Scottish mills made them in much brighter colors, which the North American market favored. All this, and much else, Customs officers learned as part of their training.

Mrs. Mossman asked, "What happens if I sign the form?"

"Then you may go, madam."

"And take my things with me? All my things?"

"Yes."

"Supposing I refuse to sign?"

"Then we shall be obliged to detain you here while we continue the investigation."

There was the briefest hesitation, then: "Very well. You fill out the form; I'll sign."

"No, madam; *you* fill it out. Now here, please describe the items, and alongside where you say they were obtained. Please give the name of the stores; also from whom you received the fur coat as a gift . . ."

Harry Standish thought: He would have to leave in a minute; it was ten to eleven now. He didn't want to reach Flight Two after the doors were closed. But first he had a hunch . . .

He waited while Mrs. Mossman completed the form and signed it.

Commencing tomorrow, an investigative officer would begin checking out the statement Mrs. Mossman had just made.

The dresses and sweaters would be requisitioned and taken to the stores where she claimed they were purchased; the fur jacket would be shown to Saks Fifth Avenue, who would undoubtedly disown it . . . Mrs. Mossman—though she didn't know it yet—was in for a great deal of trouble, including some heavy Customs duty to be paid, and almost certainly a stiff fine.

"Madam," Inspector Standish said, "is there anything else you wish to declare?"

Mrs. Mossman snapped indignantly, "There certainly isn't!"

"You're sure?" It was Customs Bureau policy to give travelers the utmost opportunity to make voluntary declarations. People were not to be entrapped unless they brought it on themselves.

Not deigning to reply, Mrs. Mossman inclined her head disdainfully.

"In that case, madam," Inspector Standish said, "will you kindly open your handbag?"

For the first time the haughty woman betrayed uncertainty. "But surely, purses are never inspected. I've been through Customs many times . . ."

"Normally they are not. But we do have the right."

Asking to see the contents of a woman's handbag was a rarity; like a man's pockets, a handbag was considered personal and almost never looked into. But when an individual chose to be difficult, Customs men could be difficult too.

Reluctantly, Mrs. Harriet Du Barry Mossman unclipped her purse.

Harry Standish inspected a lipstick and a gold compact. When he probed the powder in the compact, he extracted a diamond and ruby ring; he blew the powder on the ring away. There was a tube of hand lotion, partially used. Unrolling the tube, he could see that the bottom had been opened. When he pressed the tube near the top, there was something hard inside. He wondered when would-be smugglers would come up with something original. Such old tricks! He had seen them all many times.

Mrs. Mossman was noticeably pale. Her hauteur had disappeared.

"Madam," Inspector Standish said, "I have to leave for a short while, but I'll be back. In any case, this is going to take some time." He instructed the young Customs officer beside him, "Inspect everything else very carefully. Check the linings

the bag and cases, the seams and hems of all the clothes. He a list. You know what to do."

He was leaving when Mrs. Mossman called after him. " officer!"

He stopped. "Yes, madam."

"About the coat and dresses . . . perhaps I did make a mistake . . . I was confused. I did buy them, and there are no other things . . ."

Standish shook his head. What people never seemed to learn was that there had to be a cut-off point somewhere; after that, cooperation was too late. He saw that the young officer had found something else.

"Please! . . . I beg of you . . . my husband . . ." As the inspector turned away, the woman's face was white and drawn.

Walking briskly, Harry Standish used a short cut, below the public portion of the terminal, to reach Concourse "D" and gate forty-seven. As he went, he reflected on the foolishness of Mrs. Harriet Du Barry Mossman and the many like her. Had she been honest about the coat and dresses, and declared them, the duty payable would not have been great, especially for someone who was clearly well-to-do. The young customs officer, though noticing the sweaters, probably would not have bothered with them; and certainly her handbag would not have been inspected. Customs men were aware that most returning travelers did a little smuggling, and were often tolerant about it. Also, if asked, they would help people slip high-duty items under their duty-free exemption, charge no duty on other articles which were entitled to lower rates. The people who got nabbed, hit hard, and were sometimes prosecuted, were invariably the greedy ones like Mrs. Mossman, who tried to get away with everything. What had depressed Harry Standish today was the number of others of her kind.

He was relieved to see that the doors of Trans America Flight Two had not yet closed, and a few remaining passengers were still being checked in. His U. S. Customs uniform was a passport anywhere within the airport, and the busy gate agent barely glanced up as Inspector Standish went past. The gate agent, Standish noticed, was being helped by a red-headed woman passenger relations agent whom he knew as Mrs. Livingston.

The inspector entered the walkway to the tourist section.

a stewardess was at the rear airplane doorway. He smiled. "I'll only be a moment. Don't take off with me aboard."

He found his niece, Judy, in an aisle seat of a three-seat section. She was keeping a baby amused, the baby belonging to a young couple in the two seats alongside. Like all airplane tourist sections, this one already seemed cramped and crowded, the seats oppressively close to one another. On the few air journeys Inspector Standish made himself, he traveled tourist, but always had a sense of claustrophobia. Tonight he didn't envy any of these people the monotonous ten-hour journey which lay ahead of them.

"Uncle Harry!" Judy said. "I thought you weren't going to make it." She handed the baby back to its mother.

"I just came to say God bless!" he told her. "Have a good year, and when you come back don't try any smuggling."

She laughed. "I won't. Goodbye, Uncle Harry."

His niece put her face up to be kissed, and he bussed her affectionately. He felt good about Judy. He had a feeling she would not grow up to be a Mrs. Mossman.

Leaving the aircraft, with a friendly nod to the stewardesses, the Customs inspector paused a moment at the concourse gate, watching. The last moments before departure of any flight, especially one for some far distant place, always fascinated him, as it did many people. The final call . . . "*Trans America Airlines announce the immediate departure of Flight Two, The Golden Argosy . . .*" . . . was just coming over the p.a. system.

The knot of people waiting to board had been reduced to two. The redheaded passenger agent, Mrs. Livingston, was gathering up her papers as the regular gate agent dealt with the last arrival but one—a tall blond man, hatless, and wearing a camel-hair coat. Now, the blond man left the agent's desk and entered the tourist section walkway. Mrs. Livingston left too, walking away from the departure gate, toward the main section of the terminal.

While he had been watching, Inspector Standish was aware, almost subconsciously, of someone else nearby, facing a window which looked away from the departure gate. Now the figure turned. He saw that it was an old lady; she appeared small, demure, and frail. She was dressed primly in black in an old-fashioned style, and carried a black beaded purse. She looked as if she needed somebody to take care of her, and he

wondered why someone so old, and apparently alone, was here so late at night.

Moving with surprising spryness, the old lady crossed to where the Trans America ticket agent was dealing with the last Flight Two passenger. Standish heard some, though not all, of what was said; the old lady's words were punctuated by noise from outside, from the aircraft engines, which were being started. "Excuse . . . my son just boarded . . . blond hair, no hat, camel-hair coat . . . forgot his wallet . . . all his money." The old lady, Standish observed, was holding what looked like a man's billfold.

The gate agent glanced up impatiently. He appeared harassed; gate men usually were at the last moments of departure. The agent put out his hand to take the wallet, then, observing the old lady, changed his mind and said something quickly. He pointed to the tourist boarding walkway and Standish heard, "Ask a stewardess." The old lady smiled and nodded, and entered the walkway. A moment later she was out of sight.

All that Customs Inspector Standish had observed had taken only moments—perhaps less than a minute. Now, he saw a newcomer arrive—a stoop-shouldered, spindly man, hurrying down Concourse "D" toward gate forty-seven. The man had a gaunt face and a slight sandy mustache. He was carrying a small attaché case.

Standish had been about to turn away, but something about the man attracted his attention. It was the way the newcomer was holding his case—under his arm, protectively. Harry Standish had watched people, many times, doing the same thing as they came through Customs. It was a giveaway that whatever was inside the case was something they wanted to conceal. If this man had been coming in from overseas, Standish would have had him open the case, and would have examined its contents. But the man was going out of the United States.

Strictly speaking, it was none of Harry Standish's business. Yet something . . . instinct, a sixth sense which Customs men developed, plus a personal connection, through Judy, with Flight Two . . . something kept the inspector watching, his eyes directed at the small attaché case which the spindly man still cradled.

The feeling of confidence which returned to D O Guerrero at the insurance counter had remained. A. de

Mrs. Quonsett had left her plans flexible. There was a seat close by, which she could have occupied; however, a sudden movement by several passengers at once left a clear path to one of the aircraft toilets. A moment or two later, through the partially opened toilet door, she saw the original stewardess go forward out of sight and another stewardess begin the head count, starting at the front.

When the second stewardess—still counting—neared the back of the airplane, Mrs. Quonsett emerged from the toilet and walked quickly past with a muttered, "Excuse me." She heard the stewardess cluck her tongue impatiently. Mrs. Quonsett sensed that she had now been included in the count—but that was all.

A few rows forward, on the left side, there was an unoccupied seat in the middle of a section of three. In her experience as an aerial stowaway, the little old lady from San Diego had learned to seek such seats because most passengers disliked them; therefore they were the last to be chosen from seat selection boards and, where an airplane was less than full, were usually left empty.

Once in the seat, Mrs. Quonsett kept her head down, trying to be as inconspicuous as possible. She had no illusion that she could avoid discovery indefinitely. At Rome there would be Immigration and Customs formalities, making it impossible for her to walk away unimpeded, as she was accustomed to doing after her illegal flights to New York; but, with luck, she would have the thrill of reaching Italy, plus an agreeable journey back. Meanwhile, on this flight, there would be a good meal, a movie, and, later, perhaps, a pleasant conversation with her two seat companions.

Ada Quonsett wondered about her seat companions. She had noticed that both were men, but for the time being avoided looking at the man on her right since it would mean turning her face toward the aisle and the stewardesses, both of whom were now moving back and forth, making another head count. Mrs. Quonsett took covert stock, however, of the man on her left, a survey made easier by the fact that he was reclining and had his eyes closed. He was a gaunt, thin man, she observed, with a sallow face and scrawny neck, who looked as if a hearty meal might do him good. He had a small sandy mustache.

On his knees, Mrs. Quonsett noticed, the man on her left had an attaché case and, despite the fact that his eyes were closed, he was holding it firmly.

The stewardesses had finished their head count. Now a third stewardess appeared from the first class compartment forward, and the three of them were holding a hurried consultation.

The man on Mrs. Quonsett's left had opened his eyes. He was still gripping the case tightly. The little old lady from San Diego—an habitually curious soul—wondered what was inside.

Walking back toward the Customs Hall—this time through the passenger section of the terminal—Inspector Harry Standish was still thinking about the man with the attaché case. Standish could not have questioned the man; outside a Customs enclosure a Customs officer had no right to interrogate anyone, unless believing they had evaded Customs inspection. The man at the departure gate quite obviously had not.

What Standish could do, of course, was telegraph the man's description to Italian Customs, advising that he might be carrying contraband. But Standish doubted if he would. There was little cooperation between Customs departments internationally, only an intense professional rivalry. Even with Canadian Customs, close at hand, the same thing was true; incidents were on record where U. S. Customs had been tipped off that illegal diamond shipments were being smuggled into Canada, but—as a matter of policy—Canadian authorities were never told. Instead, U.S. agents spotted the suspects on arrival in Canada and tailed them, only making an arrest if they crossed the United States border. The U.S. reasoning was: the country which seized that kind of contraband kept it all, and Customs departments were averse to sharing loot.

No, Inspector Standish decided, there would be no telegram to Italy. He would, however, tell Trans America Airlines of his doubts and leave a decision to them.

Ahead of him he had seen Mrs. Livingston, the passenger relations agent who had been at the Flight Two departure gate. She was talking with a Skycap and a group of passengers. Harry Standish waited until the Skycap and passengers had gone.

"Hullo, Mr. Standish," Tanya said. "I hope things are quieter in Customs than around here."

"They aren't," he told her, remembering Mrs. Harriet Du Barry Mossman, no doubt still being questioned in the Customs Hall.

As Tanya waited for him to speak again, Standish hesitated. Sometimes he wondered if he was becoming too much the super sleuth, too aware of the keenness of his instincts. Most times, though, his instincts proved right.

"I was watching your Flight Two load," Standish said. "There was something bothered me." He described the gaunt, spindly man and the suspicious way he had been clasping an attaché case.

"Do you think he's smuggling something?"

Inspector Standish smiled. "If he were arriving from abroad, instead of leaving, I'd find out. All I can tell you, Mrs. Livingston, is that there's something in that case which he'd prefer other people not to know about."

Tanya said thoughtfully, "I don't quite know what I can do." Even if the man *was* smuggling she was not convinced it was the airline's business.

"Probably there's nothing to do. But you people cooperate with us, so I thought I'd pass the information on."

"Thank you, Mr. Standish. I'll report it to our D.T.M., and perhaps he'll want to notify the captain."

As the Customs inspector left, Tanya glanced at the overhead terminal clock; it showed a minute to eleven. Heading for Trans America Administration on the executive mezzanine, she reasoned: it was too late now to catch Flight Two at the departure gate; if the flight had not yet left the gate, it certainly would within the next few moments. She wondered if the District Transportation Manager was in his office. If the D.T.M. thought the information important, he might notify Captain Demerest by radio while Flight Two was still on the ground and taxiing. Tanya hurried.

The D.T.M. was not in his office, but Peter Coakley was. Tanya snapped, "What are you doing here?"

The young Trans America agent, whom the little old lady from San Diego had eluded, described sheepishly what had happened.

Peter Coakley had already received one dressing down.

The doctor, summoned to the women's washroom on a fool's errand, had been articulate and wrathful. Young Coakley clearly expected more of the same from Mrs. Livingston. He was not disappointed.

Tanya exploded, "Damn, damn, damn!" She remonstrated, "Didn't I warn you she had a barrellful of tricks?"

"Yes, you did. Mrs. Livingston. I guess I . . ."

"Never mind that now! Get on the phone to each of our gates. Warn them to be on the lookout for an old, innocent-looking woman in black—you know the description. She's trying for New York, but may go a roundabout way. If she's located, the gate agent is to detain her and call here. She is not to be allowed on any flight, no matter what she says.

"I'm going to call the other airlines."

boarding walkway was withdrawn. But another bright red light, still glowing, showed that the forward cabin door had not been closed, and a glance backward through the cockpit windows confirmed that the front boarding walkway was still in place.

Swinging around in his right-hand seat, Captain Demerest instructed Second Officer Jordan, "Open the door."

Cy Jordan was seated behind the other two pilots at a complex panel of instruments and engine controls. Now he half rose and, extending his long, lean figure, released the flight deck door which opened outward. Through the doorway, in the forward passenger section, they could see a half dozen figures in Trans America uniform, Gwen Meighen among them.

"Gwen!" Demerest called. As she came into the flight deck, "What the devil's happening?"

Gwen looked worried. "The tourist passenger count won't tally. We've made it twice; we still can't agree with the manifest and tickets."

"Is the ramp supervisor there?"

"Yes, he's checking our count now."

"I want to see him."

At this stage of any airline flight there was always a problem of divided authority. Nominally the captain was already in command, but he could neither start engines nor taxi away without authorization from the ramp supervisor. Both the captain and ramp chief had the same objective—to make an on-schedule departure. However, their differing duties sometimes produced a clash.

A moment later, the uniformed ramp supervisor, a single silver stripe denoting his rank, arrived on the flight deck.

"Look, chum," Demerest said, "I know you've got problems, but so have we. How much longer do we sit here?"

"I've just ordered a ticket recheck, captain. There's one more passenger in the tourist section than there ought to be."

"All right," Demerest said. "Now I'll tell you something. Every second we sit here we're burning fuel on three and four, *which you gave the okay to start . . .* precious fuel which we need in the air tonight. So unless this airplane leaves right now, I'm shutting everything down and we'll send for Fueling to top off our tanks. There's another thing you

ought to know: air traffic control just told us they have a temporary gap in traffic. If we taxi out right away, we can be off the ground fast; in ten minutes from now that may have changed. Now, you make the decision. What's it to be?"

Torn between dual responsibilities, the ramp supervisor hesitated. He knew the captain was right about burning fuel; yet to stop engines now, and top off tanks, would mean a further half hour's costly delay on top of the hour which Flight Two was late already. On the other hand, this was an important international flight on which the head count and ticket collection *ought* to agree. If there was really an unauthorized person aboard, and he was found and taken off, later the ramp supervisor could justify his decision to hold. But if the difference in tallies turned out to be a clerical error—as it might—the D.T.M. would roast him alive.

He made the obvious decision. Calling through the flight deck door, he ordered, "Cancel the ticket recheck. This flight is leaving now."

As the flight deck door closed, a grinning Anson Harris was on the interphone to a crewman on the ground below. "Clear to start two?"

The reply rattled back, "Okay to start two."

The forward fuselage door was closed and secured; in the cockpit, its red indicator light winked out.

Number two engine fired and held at a steady roar.

"Okay to start one?"

"Okay to start one."

The forward boarding walkway, like a severed umbilical cord, was gliding back toward the terminal.

Vernon Demerest was calling ground control on radio for permission to taxi.

Number one engine fired and held.

In the left seat, Captain Harris, who would taxi out and fly the takeoff, had his feet braced on the rudder pedal toe brakes.

It was still snowing hard.

"Trans America Flight Two from ground control. You are clear to taxi . . ."

The engine tempo quickened.

Demerest thought: *Rome . . . and Naples . . . here we come!*

It was 11 P.M., Central Standard Time.

In Concourse "D," half running, half stumbling, a figure reached gate forty-seven.

Even if there had been breath to ask, questions were unneeded.

The boarding ramps were closed. Portable signs denoting the departure of Flight Two, *The Golden Argosy*, were being taken down. A taxiing aircraft was leaving the gate.

Helplessly, not knowing what she should do next, Inez Guerrero watched the airplane's lights recede.

busied themselves with housekeeping chores around the airplane, Gwen used the p.a. system to welcome passengers aboard. With her soft English voice, she did the best she could with the treacly, insincere paragraph from her stewardess manual, which the company insisted must be read on every flight.

"On behalf of Captain Demerest and your crew . . . our most sincere wish that your flight will be pleasant and relaxing . . . shortly we shall have the pleasure of serving . . . if there is anything we can do to make your flight more enjoyable . . ."

Gwen wondered sometimes when airlines would realize that most passengers found such announcements, at the beginning and end of every flight, a boring intrusion.

More essential were the announcements about emergency exits, oxygen masks, and ditching. With two of the other stewardesses demonstrating, she accomplished them quickly.

They were still taxiing, Gwen observed—tonight more slowly than usual, taking longer to reach their takeoff runway. No doubt the reason was traffic and the storm. From outside she could hear an occasional splatter of wind-driven snow on windows and fuselage.

There was one more announcement to be made—that which aircrews liked least. It was required before takeoffs at Lincoln International, New York, Boston, Cleveland, San Francisco, and other airports with residential areas nearby.

"Shortly after takeoff you will notice a marked decrease in engine noise, due to a reduction in power. This is perfectly normal and is done as a courtesy to those who live near the airport and in the direct flight path."

The second statement was a lie. The power reduction was neither normal nor desirable. The truth was: it was a concession—some said a mere public relations gesture—involving risk to aircraft safety and human life. Pilots fought noise abatement power restrictions bitterly. Many pilots, at risk of their careers, refused to observe them.

Gwen had heard Vernon Demerest parody, in private, the announcement she had just made . . . "Ladies and gentlemen at the most critical point of takeoff, when we need our best power and have a hundred other things to do in the cockpit, we are about to throttle back drastically, then make a steep climbing turn at high gross weight and minimum speed. This is an exceedingly foolish maneuver for which a student pilot

would be thrown out of flying school. However, we are doing it on orders from our airline employers and the Federal Aviation Administration because a few people down below, who built their houses long after the airport was established, are insisting that we tiptoe past. They don't give a damn about air safety, or that we are risking your lives and ours. So hang on tight, folks! Good luck to us all, and please start praying."

Gwen smiled, remembering. There were so many things she appreciated about Vernon. He was energetically alive; he possessed strong feelings; when something interested him, he became actively involved. Even his failings—the abrasive manner, his conceit—were masculine and interesting. He could be tender, too—and was, in lovemaking, though responding eagerly to passion as Gwen had cause to know. Of all the men she knew, there was no one whose child she would bear more gladly than Vernon Demerest's. In the thought there was a bitter sweetness.

Replacing the p.a. microphone in its forward cabin niche, she was aware that the aircraft's taxiing pace had slowed; they must be near the takeoff point. These were the last few minutes she would have—for several hours to come—with any opportunity for private thoughts. After takeoff there would be no time for anything but work. Gwen had four stewardesses to supervise, as well as her own duties in the first class cabin. A good many overseas flights had male stewards directing cabin service, but Trans America encour-

On runway two five, immediately ahead of Trans America, a British VC-10 of BOAC, received word to go. It moved forward, with lumbering slowness at first, then swiftly. Its company colors—blue, white, and gold—gleamed briefly in the reflection of other aircrafts' lights, then were gone in a flurry of whirling snow and black jet exhaust. Immediately the ground controller's voice intoned, "Trans America Two, taxi into position, runway two five, and hold; traffic landing on runway one seven, left."

One seven, left, was a runway which directly bisected runway two five. There was an element of danger in using the two runways together, but tower controllers had become adept at spacing aircraft—landing and taking off—so that no time was wasted, but no two airplanes reached the intersection at the same moment. Pilots, uncomfortably aware of the danger of collision when they heard by radio that both runways were in use, obeyed controllers' orders implicitly.

Anson Harris swiftly and expertly jockeyed Flight Two on to runway two five.

Peering out, through snow flurries, Demerest could see the lights of an airplane, about to touch down on one seven. He thumbed his mike button. "Trans America Two, Roger. In position and holding. We see the landing traffic."

Even before the landing aircraft had bisected their own runway, the controller's voice returned. "Trans America Two, cleared for takeoff. Go, man, go!"

The final three words were not in any air traffic control manual, but to controller and pilots they had identical meaning: *Get the hell moving, now! There's another flight landing right after the last.* Already a fresh set of lights—ominously close to the airfield—was approaching runway one seven.

Anson Harris had not waited. His outspread fingers slid the four main throttles forward to their full extent. He ordered, "Trim the throttles," and briefly held his toe brakes on, allowing power to build, as Demerest set pressure ratios evenly for all four engines. The engines' sound deepened from a steady whine to a thunderous roar. Then Harris released the brakes and N-731-TA leaped forward down the runway.

Vernon Demerest reported to the tower, "Trans America Two on the roll," then applied forward pressure to the control yoke while Harris used nose wheel steering with his left hand, his right returning to the throttles.

AIRPORT

Speed built. Demerest called, "Eighty knots." Harris nodded, released nose wheel steering and took over the control yoke . . . Runway lights flashed by in swirling snow. Near crescendo, the big jet's power surged . . . At a hundred and thirty-two knots, as calculated earlier, Demerest called out "V-one"—notification to Harris that they had reached "decision speed" at which the takeoff could still be aborted and the aircraft stopped. Beyond V-one the takeoff must continue . . . Now they were past V-one . . . Still gathering speed, they hurtled through the runways' intersection, glimpsing to their right a flash of landing lights of the approaching plane; in mere seconds the other aircraft would cross where Flight Two had just passed. Another risk—skillfully calculated—had worked out; only pessimists believed that one day such a risk might not . . . As speed reached a hundred and fifty-four knots, Harris began rotation, easing the control column back. The nose wheel left the runway surface; they were in lift-off attitude, ready to quit the ground. A moment later, with speed still increasing, they were in the air.

Harris said quietly, "Gear up."
Demerest reached out, raising a lever on the central instrument panel. The sound of the retracting landing gear reverberated through the aircraft, then stopped with a thud as doors to the wheel wells closed.
They were going up fast—passing through four hundred feet. In a moment, the night and clouds would swallow them.

"Flaps twenty."
Still performing first officer duty, Demerest obeyed. He moved the control pedestal flap selector from thirty degrees to twenty. There was a brief sensation of sinking as the flaps—which provided extra lift at takeoff—came forward upward.

"Flaps up."

Now the flaps were fully retracted.
Demerest noted, for his report later, that at no point in the takeoff could he have faulted Anson Harris's performance the slightest degree. He had not expected to. Demerest was earlier needling, Vernon Demerest was aware that he was a top-grade captain, as exacting in performance as others—as Demerest was himself. It was Demerest had known in advance that their flight tonight would be, for himself, an easy journey. In mere seconds had passed since leaving the ground.

still climbing steeply, they passed over the runway's end, the lights below already dimming through cloud and falling snow. Anson Harris had ceased looking out and was flying on instruments alone.

Second Officer Cy Jordan was reaching forward from his flight engineer's seat, adjusting the throttles to equalize the power of all four engines.

Within the clouds there was a good deal of buffeting; from the outset of their journey, the passengers behind were getting a rough ride. Demerest snapped the "No Smoking" light switch off; the "Fasten Seat Belts" sign would remain on until Flight Two reached more stable air. Later, either Harris or Demerest would make an announcement to the passengers, but not yet. At the moment, flying was more important.

Demerest reported to departure control. "Turning portside one eight zero; leaving fifteen hundred feet."

• He saw Anson Harris smile at his use of the words "turning portside" instead of "turning left." The former was correct but unofficial. It was one of Demerest's own phrases; many veteran pilots had them—a minor rebellion against ATIS officialese which nowadays all flying people were supposed to hew to. Controllers on the ground frequently learned to recognize individual pilots by such personal idioms.

A moment later Flight Two received radio clearance to climb to twenty-five thousand feet. Demerest acknowledged while Anson Harris kept the aircraft climbing. Up there in a few minutes from now they would be in clear, calm air, the storm clouds far below, and high above, in sight, the stars.

The "turning portside" phrase *had* been noticed on the ground—by Keith Bakersfeld.

Keith had returned to radar watch more than an hour ago after the time spent in the controllers' locker room, alone, remembering the past and reaffirming his intention of tonight.

Several times since then Keith's hand had gone instinctively into his pocket, touching the key of his covertly rented room at the O'Hagan Inn. Otherwise, he had concentrated on the radarscope in front of him. He was now handling arrivals from the east and the continuing heavy traffic volume demanded intensive concentration.

He was not concerned directly with Flight Two; however, the departure controller was only a few feet away and in a brief interval between his own transmissions Keith heard the

"turning portside" phrase and recognized it, along with his brother-in-law's voice. Until then, Keith had no idea that Vernon Demerest was flying tonight; there was no reason why he should. Keith and Vernon saw little of each other. Like Mel, Keith had never achieved any close rapport with his brother-in-law, though there had been none of the friction between them which marred relations between Demerest and Mel.

Shortly after Flight Two's departure, Wayne Tevis, the radar supervisor, propelled his castor-equipped chair across to Keith.

"Take five, buddyboy," Tevis said in his nasal Texan drawl. "I'll spell you. Your big brother dropped in."

As he unplugged his headset and turned, Keith made out the figure of Mel behind him in the shadows. He remembered his earlier hope that Mel would not come here tonight; at the time Keith feared that a meeting between the two of them might be more than he could handle emotionally. Now he found that he was glad Mel had come. They had always been good friends as well as brothers, and it was right and proper there should be a leave-taking, though Mel would not know that it was that—at least, until he learned tomorrow.

"Hi," Mel said. "I was passing by. How have things been?"

Keith shrugged. "I guess, all right."

"Coffee?" Mel had picked up two take-out coffees from one of the airport restaurants on his way. They were in a paper bag; he offered one of the cups to Keith and took the other himself.

"Thanks." Keith was grateful for the coffee as well as for the break. Now that he was away from the radarscope, if only briefly, he realized that his own mental tension had been accumulating again within the past hour. He observed, as if watching someone else, that his hand holding the coffee cup was not entirely steady.

Mel glanced around the busy radar room. He was careful not to look too obviously at Keith whose appearance—the aunt, strained face with deep hollows beneath the eyes—had shocked him. Keith's appearance had deteriorated over recent months; tonight, Mel thought, his brother looked worse than at any time before.

His mind still on Keith, he nodded toward the profusion

AIRPORT

of radar equipment. "I wonder what the old man would have thought of all this."

The "old man" was—had been—their father, Wally (Wild Blue) Bakersfeld, stick-and-goggles aviator, stunt flier, crop duster, night mail carrier, and parachute jumper—the last when he needed money badly enough. Wild Blue had been a contemporary of Lindbergh, a crony of Orville Wright, and had flown to the end of his life, which terminated abruptly in a filmed Hollywood stunt sequence—an airplane crash, intended to be simulated, but which turned out to be real. It happened when Mel and Keith were in their teens, but not before Wild Blue had inculcated in both boys an acceptance of aviation as their way of life, which persisted into adulthood. In Keith's case, Mel sometimes thought, the father had done his younger son a disservice.

Keith shook his head without answering Mel's question, which didn't matter because it had been only rhetorical, Mel marking time while wondering how best to approach what was uppermost in his mind. He decided to do it directly.

Keeping his voice low, Mel said, "Keith, you're not well; you're looking damned awful. I know it, you know it; so why pretend? If you'll let me, I'd like to help. Can we talk—about whatever the trouble is? We've always been honest with each other."

"Yes," Keith acknowledged, "we've always been that." He sipped his coffee, not meeting Mel's eyes.

The reference to their father, though casual, had moved Keith strangely. He remembered Wild Blue well; he had been a poor provider—the Bakersfeld family was perpetually short of money—but a genial man with his children, especially if the talk was about flying, as the two boys usually wanted it to be. Yet in the end it was not Wild Blue who had been a father figure to Keith, but Mel; Mel Bakersfeld who possessed the sound sense and stability, as far back as Keith remembered, which their father lacked. It was Mel who always looked out for Keith, though never being ostentatious about it, or overprotective as some older brothers were, robbing a younger boy of dignity. Mel had a facility, even then, for doing things for people and making them feel good at the same time.

Mel had shared things with Keith had been candid and thoughtful, even in small ways. The coffee tonight was an exam

checked himself: Don't wax sentimental over a carton coffee just because this is a last meeting. This time, Keith's aloneness, his anguish and guilt were beyond Mel's fix. Even Mel could not bring back to life little Valerie Redfe and her parents.

Mel motioned with his head and they moved to the corridor outside the radar room.

"Listen, old chum," Mel said. "You need a break from all this—a long one; perhaps more than a break. Maybe you need to get away for good."

For the first time Keith smiled. "You've been listening, Natalie."

"Natalie's apt to talk a lot of sense."

Whatever Keith's other problems might be, Mel reflected he had been outstandingly fortunate in Natalie. The thought of his sister-in-law reminded Mel of his own wife, Cindy, who presumably was still on her way to the airport. Comparing your own marriage unfavorably with someone else's was disloyal, Mel supposed; at times, though, it was hard not to do it. He wondered if Keith really knew just how lucky—least in that important area—he had been.

"There's something else," Mel said. "I haven't brought it up before, but maybe now's the time. I don't think you've ever told me the whole of what happened at Leesburg—that day, the accident. Maybe you didn't tell anyone, because I've read all the testimony. Is there something else; that you've never told?"

Keith hesitated only momentarily. "Yes."

"I figured there might be." Mel chose his words carefully; he sensed that what was passing between them could be of critical importance. "But I also figured if you wanted me to know, you'd tell me; and if you didn't, well, it was none of my business. Sometimes, though, if you care about someone enough—say, like a brother—you ought to make it your business, whether they want you to butt in or not. So I'm making this mine now." He added softly, "You hear me?"

"Yes," Keith said, "I hear you." He thought: He could stop this conversation, of course; perhaps he should stop it now, at once—since it was pointless—by excusing himself and going back to the radarscope. Mel would assume they could resume later, not knowing that for the two of them together, there would be no later.

"That day at Leesburg," Mel insisted. "The part you've

never told—it has something to do with the way you feel, the way you *are*, right now. Hasn't it?"

Keith shook his head. "Leave it alone, Mel. Please!"

"Then I'm right. There *is* a relationship, isn't there?"

What was the point of denying the obvious? Keith nodded. "Yes."

"Won't you tell me? You have to tell someone; sooner or later you have to." Mel's voice was pleading, urgent. "You can't live with this thing—whatever it is—inside you forever. Who better to tell than me? I'd understand."

You can't live with this . . . Who better to tell than me?

It seemed to Keith that his brother's voice, even the sight of Mel, was coming to him through a tunnel, from the distant end, far away. At the farther end of the tunnel, too, were all the other people—Natalie, Brian, Theo, Perry Yount, Keith's friends—with whom he had lost communication long since. Now, of them all, Mel alone was reaching out, striving to bridge the gap between them . . . but the tunnel was long, their apartness—after all the length of time that Keith had been alone—too great.

And yet . . .

As if someone else were speaking, Keith asked, "You mean tell you here? Now?"

Mel urged, "Why not?"

Why not, indeed? Something within Keith stirred; a sense of wanting to unburden, even though in the end it could change nothing . . . Or could it? Wasn't that what the Confessional was all about; a catharsis; an exorcism of sin through acknowledgment and contrition? The difference, of course, was that the Confessional gave forgiveness and expiation, and for Keith there could be no expiation—ever. At least . . . he hadn't thought so. Now he wondered what Mel might say.

Somewhere in Keith's mind a door, which had been closed, inched open.

"I suppose there's no reason," he said slowly, "why I shouldn't tell you. It won't take long."

Mel remained silent. Instinct told him that if wrong words were spoken they could shatter Keith's mood, could cut off the confidence which seemed about to be given which he had waited so long and anxiously to hear he could finally learn what bedeviled Ke

they might come to grips with it. Judging by his brother's appearance tonight, it had better be soon.

"You've read the testimony," Keith said. His voice was a monotone. "You just said so. You know most of what happened that day."

Mel nodded.

"What you don't know, or anybody knows except me; what didn't come out at the inquiry, what I've thought about over and over . . ." Keith hesitated; it seemed as if he might not continue.

"For God's sake! For your own reason, for Natalie's sake, for mine—go on!"

It was Keith's turn to nod. "I'm going to."

He began describing the morning at Leesburg a year and a half before; the air traffic picture when he left for the washroom; supervisor Perry Yount; the trainee controller left in immediate charge. In a moment, Keith thought, he would admit how he had loitered; how he failed the others through indifference and negligence; how he returned to duty too late; how the accident, the multiple tragedy of the Redferns' deaths, had been solely his own doing; and how others were blamed. Now that at last he was doing what he had longed to, without knowing it, there was a sense of blessed relief. Words, like a cataract long damned, began tumbling out.

Mel listened.

Abruptly, a door farther down the corridor opened. A voice—the tower watch chief's—called, "Oh, Mr. Bakersfeld!"

His footsteps echoing along the corridor, the tower chief walked toward them. "Lieutenant Ordway has been trying to reach you, Mr. Bakersfeld; so has the Snow Desk. They both want you to call." He nodded. "Hi, Keith!"

Mel wanted to cry out, to shout for silence or delay, plead to be alone with Keith for a few minutes more. But he knew it was no good. At the first sound of the tower chief's voice Keith had stopped in mid-sentence as if a switch were snapped to "off."

Keith had not, after all, reached the point of describing his own guilt to Mel. As he responded automatically to the tower chief's greeting, he wondered: Why had he begun at all? What could he have hoped to gain? There could never be any gain, never any forgetting. No confession—to whomever made—would exorcise memory. Momentarily he had grasped at what he mistook for a faint flicker of hope, even perhaps

reprieve. As it had to be, it proved illusory. Perhaps it was as well that the interruption occurred when it did.

Once more, Keith realized, a mantle of loneliness, like an invisible thick curtain, surrounded him. Inside the curtain he was alone with his thoughts, and inside his thoughts was a private torture chamber where no one, not even a brother, could reach through.

From that torture chamber . . . waiting, always waiting . . . there could be only one relief. It was the way he had already chosen, and would carry through.

"I guess they could use you back inside, Keith," the tower watch chief said. It was the gentlest kind of chiding. Keith had already had one work-break tonight; another inevitably threw a heavier load on other people. It was also a reminder to Mel, perhaps unintended, that as airport general manager his writ did not run here.

Keith mumbled something and gave a distant nod. With a sense of helplessness, Mel watched his brother return to the radar room. He had heard enough to know that it was desperately important he should hear more. He wondered when that would be, and how. A few minutes ago he had broken through Keith's reserve, his secrecy. Would it happen again? With despair, Mel doubted it.

For sure, there would be no more confidences from Keith tonight.

"I'm sorry, Mr. Bakersfeld." As if belatedly guessing Mel's thoughts, the tower chief spread his hands. "You try to do the best for everybody. It isn't always easy."

"I know." Mel felt like sighing, but restrained himself. When something like this happened, you could only hope for the right occasion to occur again; meanwhile you got on with other things you had to do.

"Tell me, please," Mel said, "what were those messages again?"

The tower chief repeated them.

Instead of telephoning the Snow Control Desk, Mel walked down one floor of the control tower and went in. Danny Farrow was still presiding over the busy snow clearance command console.

There was a query about priorities in clearing the aircraft parking areas of competing airlines, which Mel settled, then checked on the situation concerning the blocked runway, three zero. There was no change, except that Joe Patroni

was now on the airfield and had taken charge of attempts to move the mired Aéreo-Mexican 707, which was still preventing the runway being used. A few minutes earlier, Patroni had reported by radio that he expected to make a new attempt to move the aircraft within an hour. Knowing Joe Patroni's reputation as a top-notch troubleshooter, Mel decided there was nothing to be gained by demanding a more detailed report.

At the Snow Desk Mel remembered the message to call Police Lieutenant Ordway. Assuming that the lieutenant was still in the terminal, Mel had him paged and, a few moments later, Ordway came on the line. Mel expected the lieutenant's call to be about the anti-noise delegation of Meadowood residents. It wasn't.

"The Meadowood people are starting to come in, but they haven't been a problem and they haven't asked for you yet," Ned Ordway said when Mel raised the question. "I'll let you know when they do."

What he had called about, the policeman reported, was a woman who had been picked up by one of his men. She was lying, and apparently wandering aimlessly in the main terminal. "We couldn't get any sense out of her, but she wasn't doing anything wrong so I didn't want to take her to the station house. She seemed upset enough without that."

"What did you do?"

Ordway said apologetically, "There aren't many quiet places around here tonight, so I put her in the anteroom outside your office. I thought I'd let you know in case you got back and wondered."

"That's all right. Is she alone?"

"One of my men was with her, though he may have left by now. But she's harmless; I'm sure of that. We'll check on her again soon."

"I'll be back at my office in a few minutes," Mel said. "I'll see if I can do any good myself." He wondered if he would have more success talking with the unknown woman than he had had with Keith; he doubted if he could do worse. The thought of Keith, who seemed close to breaking point, still troubled Mel deeply.

As an afterthought, he asked, "Did you find out the woman's name?"

"Yes, we got that much. It's a Spanish-sounding name. Just a minute; I have it written down."

There was a pause, then Lieutenant Ordway said, "Her name is Guerrero. Mrs. Inez Guerrero."

Tanya Livingston said incredulously, "You mean Mrs. Quonsett's aboard Flight Two?"

"I'm afraid there's no doubt of it, Mrs. Livingston. There was a little old lady, exactly the way you've described her." The gate agent who had supervised boarding of *The Golden Argosy* was in the D.T.M.'s office with Tanya and young Peter Coakley, the latter still mortified at having been bamboozled by Mrs. Ada Quonsett while she was in his charge.

The gate agent had come to the office a few minutes ago in response to Coakley's telephoned warning, to all Trans America gate positions, about the elusive Mrs. Quonsett.

"It just didn't occur to me there was anything wrong," the gate agent said. "We let other visitors aboard tonight; they came off." He added defensively, "Anyway, I'd been under pressure all evening. We were short staffed, and apart from the time you were there helping, I was doing the work of two people. You know that."

"Yes," Tanya said, "I know." She had no intention of passing out blame. If anyone was responsible for what had happened, it was Tanya herself.

"It was just after you left, Mrs. Livingston. The old lady said something about her son, I think it was, leaving his vallet. She even showed it to me. It had money in it, she said, which was why I didn't take it."

"She'd already figured that. It's one of her regular gags."

"I didn't know it, so I let her go aboard. From then until a few minutes ago when I got the phone call, I never gave her another thought."

"She fools you," Peter Coakley said. He gave a sideways glance at Tanya. "She sure fooled me."

The agent shook his head. "If I didn't have to believe it, I wouldn't, even now. But she's aboard, all right." He described the discrepancy between the tourist section head count and the ticket tally, then afterward, the ramp supervisor's decision to let the aircraft go, rather than incur further delay.

Tanya said quickly, "I suppose there's no doubt Flight Two's already taken off."

"Yes, they have. I checked on my way here. Even if they

hadn't, I doubt they'd bring the aircraft back in, especially tonight."

"No they wouldn't." Nor was there the slightest chance, Tanya knew, of *The Golden Argosy* changing course and returning for a landing, merely because of Ada Quonsett. The time and cost to disembark one stowaway would run to thousands of dollars—far more than to take Mrs. Quonsett to Rome and bring her back.

"Is there a refueling stop?" Sometimes, Tanya knew, Europe-bound flights made non-scheduled stops for fuel at Montreal or Newfoundland. If so, there would be a chance to pull Mrs. Quonsett off, robbing her of the satisfaction of getting all the way to Italy.

"I asked Operations about that," the agent answered. "The flight plan shows they're going right through. No stops."

Tanya exclaimed, "Damn that old woman!"

So Ada Quonsett was going to get her ride to Italy and back, with probably a night's lodging in between, and with meals supplied—all at airline expense. Tanya thought angrily: she had underestimated the old lady's determination not to be sent back to the West Coast; she had erred also in assuming that Mrs. Quonsett would head only for New York.

Barely fifteen minutes earlier Tanya had thought of the developing contest between herself and Ada Quonsett as a battle of wits. If it was, without doubt the little old lady from San Diego had won.

With uncharacteristic savageness, Tanya wished that the airline would make an exception and prosecute Mrs. Quonsett. But she knew they wouldn't.

Young Peter Coakley started to say something.

Tanya snapped, "Oh, shut up!"

The District Transportation Manager returned to his office a few minutes after Coakley and the gate agent left. The D.T.M., Bert Weatherby, was a hard-working, hard-driving executive in his late forties, who had come up the hard way, beginning as a ramp baggage handler. Normally considerate, and with a sense of humor, tonight he was tired and testy from three days of continuous strain. He listened impatiently to Tanya's report in which she accepted the main responsibility herself, mentioning Peter Coakley only incidentally.

Running a hand through his sparse graying hair, the D.T.M. observed, "I like to check that there's still some left up there. It's things like this that are making the rest of it fall out."

He considered, then rasped, "You got us into this mess; you'd better do the salvaging. Talk to Flight Dispatch; ask them to call the captain of Flight Two on company radio and fill him in on what happened. I don't know what he can do. Personally, I'd like to throw the old hag out at thirty thousand feet, but that'll be up to him. By the way, who is the captain?"

"Captain Demerest."

The D.T.M. groaned. "It would be. He'll probably think it's all a great joke because management boobed. Anyway, advise him the old biddy's to be detained on board after landing, and is not to be allowed off without escort. If the Italian authorities want to jail her, so much the better. Then get a signal off to our station manager in Rome. When they arrive it'll be his baby, and I hope he's got more competent people around him than I have."

"Yes, sir," Tanya said.

She started to tell the D.T.M. of the other matter concerning Flight Two—the suspicious-looking man with an attaché case whom Customs Inspector Standish had seen going aboard. Before she could finish, the D.T.M. cut her off.

"Forget it! What do the Customs people want us to do—their job? As long as the airline's not involved, I don't give a damn what the guy's carrying. If Customs here want to know what's in his case, let them ask Italian Customs to check, not us. I'll be damned if I'll interrogate, and maybe offend, a fare-paying passenger for something that's none of our business."

Tanya hesitated. Something about the man with the attaché case—even though she hadn't actually seen him—bothered her. There were instances she had heard of where . . . Of course, the idea was absurd . . .

"I was wondering," she said. "He might not be smuggling at all."

The D.T.M. snapped, "I said forget it."

Tanya left. Back at her desk, she began writing the message to Captain Demerest of Flight Two concerning Mrs. Ada Quonsett.

2

In a taxi en route to the airport from downtown, Cindy Bakersfeld leaned back against the rear seat and closed her eyes. She was neither aware, nor cared, that outside it was still snowing, nor that the taxi was moving slowly in heavy traffic. She was in no hurry. A wave of physical pleasure and contentment (Was the right word euphoria? Cindy wondered) swept over her.

The cause was Derek Eden.

Derek Eden, who had been at the Archidona Relief Fund cocktail party (Cindy still didn't know *which* Archidona); who had brought her a triple-strength Bourbon, which she hadn't drunk, then had propositioned her in the most unimaginative way. Derek Eden, until today only a slightly known *Sun-Times* reporter with a second-grade by-line; Derek Eden with the dissolute face, the casual air, the nondescript unpressed clothes; Derek Eden and his beat-up filthy-inside-and-out Chevrolet; Derek Eden, who had caught Cindy in a barriers-down moment, when she needed a man, any man, and she hadn't hoped for much; Derek Eden who had proved to be the finest and most exciting lover she had ever known.

Never, never before had Cindy experienced anyone like him. Oh, God!, she thought; if ever there was sensual, physical perfection, she attained it tonight. More to the point; now that she had known Derek Eden . . . dear Derek . . . she wanted him again—often. Fortunately, it was unmistakable that he now felt the same way about her.

Still leaning back in the rear of the taxi, she relived mentally the past two hours.

They had driven, in the awful old Chevrolet, from the Lake Michigan Inn to a smallish hotel near the Merchandise Mart. A doorman accepted the car disdainfully—Derek Eden didn't seem to notice—and inside, in the lobby, the night manager was waiting. Cindy gathered that one of the phone calls which her escort had made was to here. There was no formality of checking in, and the night manager showed

them directly to a room on the eleventh floor. After leaving the key, and with a quick "goodnight," he left.

The room was so-so; old fashioned, spartan, and with cigarette burns on the furniture, but clean. It had a double bed. Beside the bed, on a table, was an unopened bottle of Scotch, some mixes and ice. A card on the liquor tray read, "*With the manager's compliments*"; Derek Eden inspected the card, then put it in his pocket.

When Cindy inquired, later on, Derek explained, "Sometimes a hotel will oblige the press. When they do, we don't make any promises; the paper wouldn't go for it. But maybe sometimes a reporter or a deskman will put the hotel's name in a story if it's an advantage; or if the story's a bad one—like a death; hotels hate that—we might leave it out. As I say, no promises. You do the best you can."

They had a drink, and chatted, then another, and during the second drink he began to kiss her. It was soon after that she became aware of the gentleness of his hands, which he passed through her hair quite a lot to begin with, in a way which she could feel through her entire body; then the hands began exploring slowly, oh, so slowly . . . and it was also then that Cindy began to realize this might be something special.

While he was undressing her, demonstrating a finesse which he had lacked earlier, he whispered, "Don't let's hurry, Cindy—either of us." But soon after, when they were in bed, and wonderfully warm, as Derek Eden promised in the car they would be, she *had* wanted to hurry, and cried out, "Yes, yes! . . . Oh, please! I can't wait!" But he insisted gently, "Yes, you can. You must." And she obeyed him, being utterly, deliciously in his control, while he led her, as if by the hand like a child, close to the brink, then back a pace or two while they waited with a feeling like floating in air; then near once more, and back, and the same again and again, the bliss of it all near-unendurable; and finally when neither of them could wait longer, there was a shared crescendo like a hymn of heaven and a thousand sweet symphonies; and if Cindy had been able to choose a moment for dying, because nothing afterward could ever be that moment's equal, she would have chosen then.

Later, Cindy decided that one of the things she liked about Derek Eden was his total lack of humbug. Ten minutes after their supreme moment, at a point where Cindy's normal

breathing was returning and her heart regaining its regular beat, Derek Eden propped himself on an elbow and lighted cigarettes for them both.

"We were great, Cindy." He smiled. "Let's play a return match soon, and lots of others after that." It was, Cindy realized, an admission of two things: that what they had experienced was solely physical, a sensual adventure, and neither should pretend that it was more; yet together they had attained that rare Nirvana, an absolute sexual compatibility. Now, what they had available, whenever needed, was a private physical paradise, to be nurtured and increasingly explored.

The arrangement suited Cindy.

She doubted if she and Derek Eden would have much in common outside a bedroom, and he was certainly no prize to be exhibited around the social circuit. Without even thinking about it, Cindy knew she would have more to lose than gain by being seen publicly in Derek's company. Besides, he had already intimated that his own marriage was solid, though Cindy guessed he wasn't getting as much sex at home as needed, a condition with which she sympathized, being the same situation herself.

Yes, Derek Eden was someone to be treasured—but to become involved with emotionally. She would treasure him. Cindy resolved not to be demanding, nor let their lovemaking become too frequent. A single session like tonight would last Cindy a long time, and could be relived just thinking about it. Play a little hard-to-get, she told herself to it that Derek Eden went on wanting her as much as he wanted him. That way, the whole thing could last for years.

Cindy's discovery of Derek had also, in a strange way, provided her with a freedom she had not possessed before.

Now that she had better-than-average sex available were, on a separate shelf, she could view the choice between Mel and Lionel Urquhart more objectively.

Her marriage to Mel had, in some ways, already ended. Mentally and sexually they were estranged. The slightest disagreement resulted in bitter quarreling. Mel appeared to think about nowadays was his damnable port. Each day, it seemed, thrust Mel and Cindy apart.

Lionel, who was satisfactory in all respects except that he wanted divorces all around so that he could marry Cindy

Mel detested Cindy's social ambitions. Not only would he do nothing to advance them; he impeded them. Lionel, on the other hand, was well established in Illinois society, saw nothing unusual in Cindy's social aims and would, and could, help her fulfill them.

Until now, Cindy's choice had been complicated by the remembrance of her fifteen years of marriage to Mel and the good times together, mental and physical, they had once enjoyed. She had hoped vaguely that the past—including the satisfactions of sex—might somehow be rekindled. It was, she admitted to herself, a delusive hope.

Lionel, as a sexual partner, had little or nothing to offer. Neither—at least for Cindy, any more—had Mel.

But if sex were eliminated—an elimination which Derek Eden, like a secretly stabled stallion, had now made possible—Lionel, as a competitor to Mel, came out far ahead.

In the taxi, Cindy opened her eyes and mused.

She wouldn't make any firm decision until she had talked with Mel. Cindy didn't like decisions, anyway, and invariably put them off until they could be delayed no longer. Also, there were still imponderables involved: the children; memories of the years with Mel, which hadn't *all* been bad; and when you once cared deeply for someone, you never shook it off entirely. But she was glad she had decided, after all, to come out here tonight.

For the first time since leaving downtown Cindy leaned forward, peering out into the darkness to see if she could determine where they were. She couldn't. Through misted windows she could see snow and many other cars, all moving slowly. She guessed they were on the Kennedy Expressway, but that was all.

She was aware of the cab driver's eyes watching her in his rearview mirror. Cindy had no idea what kind of man the driver was; she hadn't taken notice when she got into the cab back at the hotel, which she and Derek left separately since they decided they might as well start being discreet immediately. Anyway, tonight all faces and bodies merged into the face and body of Derek Eden.

"That's Portage Park over there, madam," the driver said. "We're getting close to the airport. Won't be long."

"Thank you."

"Lotsa traffic going out there besides us. Guess those airport

people must have had their problems, what with the big storm and all."

Who the hell cares?, Cindy thought. *And didn't anyone ever think or talk of anything besides that cruddy airport?* But she kept quiet.

At the main terminal entrance Cindy paid off the cab and hurried inside to avoid wet snow which gusted under canopies and swirled along sidewalks. She threaded the crowds in the main concourse, moving around one sizable group which seemed to intend some kind of demonstration because several people were helping assemble a portable public address system. A Negro police lieutenant, whom Cindy had met several times with Mel, was talking to two or three men from the group who appeared to be leaders. The policeman was shaking his head vigorously. Not really curious—nothing about this place really interested her—Cindy moved on, heading for the airport administrative offices on the mezzanine.

Lights were on in all the offices, though most were unoccupied and there was none of the clatter of typewriters or hum of conversation, as during daytime working hours. At least some people, Cindy thought, had sense enough to go home at night.

The only person in sight was a middle-aged woman, in drab clothes, in the anteroom to Mel's office. She was seated on a settee from where she seemed to be looking vacantly into space, and took no notice as Cindy came in. The woman's eyes were red as if she had been crying. Judging by her clothes and shoes, which were sodden, she had been outside in the storm.

Cindy gave the other woman only a mildly curious glance before going into Mel's office. The office was empty, and Cindy sat down in a chair to wait. After a few moments she closed her eyes and resumed her pleasant thoughts about Derek Eden.

Mel hurried in—he was limping more than usual, Cindy noticed—about ten minutes later.

"Oh!" He appeared surprised when he saw Cindy, and went back to close the door. "I really didn't think you'd come."

"I suppose you'd have preferred me not to."

Mel shook his head. "I still don't think there's anything to be gained by it—at least, not for what you seem to have in mind." He looked at his wife appraisingly, wondering what

real purpose was in coming here tonight. He had learned long ago that Cindy's motives were usually complicated, and frequently quite different from what they appeared to be. He had to admit, though, that she looked her best tonight; positively glamorous, with a kind of radiance about her. Unfortunately, the glamour no longer affected him personally.

"Suppose you tell me," Cindy said, "what you think I've in mind."

He shrugged. "I got the impression that what you wanted was a fight. It occurred to me that we had enough of them home without arranging another here."

"Perhaps we'll *have* to arrange something here; since you're hardly ever home any more."

"I might be home, if the atmosphere were more congenial." They had been talking for just a few seconds, Cindy realized, and already were sniping at each other. It seemed impossible nowadays for the two of them to hold a conversation without at happening.

Just the same, she could not resist answering, "Oh, really! That isn't usually the reason you give for not being at home. You're always claiming how all-fired important it is for you to be here at the airport—if necessary, twenty-four hours a day. So many important things—or so you say—are always happening."

Mel said curtly, "Tonight they are."

"But not other times?"

"If you're asking whether I've sometimes stayed here in preference to coming home, the answer's yes."

"At least this is the first time you've been honest about it."

"Even when I do come home, you insist on dragging me into some stupid stuffed-shirt affair like tonight's."

His wife said angrily, "So you never did intend to come home tonight!"

"Yes, I did. I told you so. But . . ."

"But nothing!" Cindy could feel the short fuse of her temper burning. "You counted on something turning up to prevent you, the way it always does. So that you could weasel out and have an alibi; so you could convince yourself, even if you don't convince me, because I think you're a liar and a fake."

"Take it easy, Cindy."

"I won't take it easy!"

They glared at each other.

What had happened to them, Mel wondered, that they had come to this?—squabbling like ill-bred children; dealing in pettiness; exchanging vicious gibes; and in all of it, he himself no better than Cindy. Something happened when they quarreled which demeaned them both. He wondered if it was always this way when things were sour with two people who had lived together for a long time. Was it because they knew, and therefore could probe painfully, each other's weaknesses? He had once heard someone say that a disintegrating marriage brought out the worst in both partners. In his own and Cindy's case it was certainly true.

He tried to speak more reasonably. "I don't think I'm a liar, or a fake. But maybe you have a point about my counting on something turning up, enough to keep me away from the social things, which you know I hate. I just hadn't thought of it that way."

When Cindy remained silent, he went on, "You can believe it or not, but I did intend to meet you tonight downtown—at least I think so. Maybe I didn't really, the way you said; I don't know. But I do know that I didn't arrange the storm, and, since it started, a lot of things have happened that—for real this time—have kept me here." He nodded toward the outer office. "One of them is that woman sitting out there. I told Lieutenant Ordway I'd talk to her. She seems to be in some sort of trouble."

"Your wife's in trouble," Cindy said. "The woman out there can wait."

He nodded. "All right."

"We've had it," Cindy said. "You and me. Haven't we?"

He waited before answering, not wanting to be hasty, yet realizing that now this had come up, it would be foolish to avoid the truth. "Yes," he said finally. "I'm afraid we have."

Cindy shot back, "If only you'd change! If you'd see things my way. It's always been what *you* want to do, or don't. If you'd only do what *I* want . . ."

"Like being out six nights a week in black tie, and white tie on the seventh?"

"Well, why not?" Emotionally, imperiously, Cindy faced him. He had always admired her in that kind of spunky mood, even when it was directed at himself. Even now . . .

"I guess I could say the same kind of thing," he told her. "About changing; all that. The trouble is, people don't change

—not in what they are basically; they adapt. It's that—two people adapting to each other—that marriage is supposed to be about."

"The adapting doesn't have to be one-sided."

"It hasn't been with us," Mel argued, "no matter what you think. I've tried to adapt; I guess you have, too. I don't know who's made the most effort; obviously I think it's me, and you think it's you. The main thing is: though we've given it plenty of time to work, it hasn't."

Cindy said slowly, "I suppose you're right. About the last bit, anyway. I've been thinking the same way too." She stopped, then added, "I think I want a divorce."

"You'd better be quite sure. It's fairly important." Even now, Mel thought, Cindy was hedging about a decision, waiting for him to help her with it. If what they had been saying were less serious, he would have smiled.

"I'm sure," Cindy said. She repeated, with more conviction. "Yes, I'm sure."

Mel said quietly, "Then I think it's the right decision for us both."

For a second Cindy hesitated. "You're sure, too?"

"Yes," he said. "I'm sure."

The lack of argument, the quickness of the exchange, seemed to bother Cindy. She asked, "Then we've made a decision?"

"Yes."

They still faced each other, but their anger was gone.

"Oh hell!" Mel moved, as if to take a pace forward. "I'm sorry, Cindy."

"I'm sorry, too." Cindy stayed where she was. Her voice was more assured. "But it's the most sensible thing, isn't it?"

He nodded. "Yes. I guess it is."

It was over now. Both knew it. Only details remained to be attended to.

Cindy was already making plans. "I shall have custody of Roberta and Libby, of course, though you'll always be able to see them. I'll never be difficult about that."

"I didn't expect you would be."

Yes, Mel mused, it was logical that the girls would go with their mother. He would miss them both, Libby especially. No outside meetings, however frequent, could ever be a substitute for living in the same house day by day. He re-

They glared at each other.

What had happened to them, Mel wondered, that they had come to this?—squabbling like ill-bred children; dealing in pettiness; exchanging vicious gibes; and in all of it, he himself no better than Cindy. Something happened when they quarreled which demeaned them both. He wondered if it was always this way when things were sour with two people who had lived together for a long time. Was it because they knew, and therefore could probe painfully, each other's weaknesses? He had once heard someone say that a disintegrating marriage brought out the worst in both partners. In his own and Cindy's case it was certainly true.

He tried to speak more reasonably. "I don't think I'm a liar, or a fake. But maybe you have a point about my counting on something turning up, enough to keep me away from the social things, which you know I hate. I just hadn't thought of it that way."

When Cindy remained silent, he went on, "You can believe or not, but I did intend to meet you tonight downtown—at least I think so. Maybe I didn't really, the way you said; I don't know. But I do know that I didn't arrange the storm, and, since it started, a lot of things have happened that—well, real this time—have kept me here." He nodded toward his outer office. "One of them is that woman sitting outside. I told Lieutenant Ordway I'd talk to her. She seems to be in some sort of trouble."

"Your wife's in trouble," Cindy said. "The woman outside can wait."

He nodded. "All right."

"We've had it," Cindy said. "You and me. Haven't we?"

He waited before answering, not wanting to be hasty, yet realizing that now this had come up, it would be foolish to deny the truth. "Yes," he said finally. "I'm afraid we have." Cindy shot back, "If only you'd change! If you'd see things my way. It's always been what *you* want to do, or I don't. If you'd only do what *I* want . . ."

"Like being out six nights a week in black tie, and white on the seventh?"

"Well, why not?" Emotionally, imperiously, Cindy faced him. He had always admired her in that kind of spunky mood, even when it was directed at himself. Even now . . .

"I guess I could say the same kind of thing," he told her. "About changing; all that. The trouble is, people don't change

—not in what they are basically; they adapt. It's that—two people adapting to each other—that marriage is supposed to be about."

"The adapting doesn't have to be one-sided."

"It hasn't been with us," Mel argued, "no matter what you think. I've tried to adapt; I guess you have, too. I don't know who's made the most effort; obviously I think it's me, and you think it's you. The main thing is: though we've given it plenty of time to work, it hasn't."

Cindy said slowly, "I suppose you're right. About the last bit, anyway. I've been thinking the same way too." She stopped, then added, "I think I want a divorce."

"You'd better be quite sure. It's fairly important." Even now, Mel thought, Cindy was hedging about a decision, waiting for him to help her with it. If what they had been saying were less serious, he would have smiled.

"I'm sure," Cindy said. She repeated, with more conviction. "Yes, I'm sure."

Mel said quietly, "Then I think it's the right decision for us both."

For a second Cindy hesitated. "You're sure, too?"

"Yes," he said. "I'm sure."

The lack of argument, the quickness of the exchange, seemed to bother Cindy. She asked, "Then we've made a decision?"

"Yes."

They still faced each other, but their anger was gone.

"Oh hell!" Mel moved, as if to take a pace forward. "I'm sorry, Cindy."

"I'm sorry, too." Cindy stayed where she was. Her voice was more assured. "But it's the most sensible thing, isn't it?"

He nodded. "Yes. I guess it is."

It was over now. Both knew it. Only details remained to be attended to.

Cindy was already making plans. "I shall have custody of Roberta and Libby, of course, though you'll always be able to see them. I'll never be difficult about that."

"I didn't expect you would be."

Yes, Mel mused, it was logical that the girls would go with their mother. He would miss them both, Libby especially. No outside meetings, however frequent, could ever be a substitute for living in the same house day by day. He re-

remembered his talks with his younger daughter on the telephone tonight; what was it Libby had wanted the first time? *A map of February*. Well, he had one now; it showed some unexpected detours.

"And I'll have to get a lawyer," Cindy said. "I'll let you know who it is."

He nodded, wondering if all marriages went on to terminate so matter-of-factly once the decision to end them had been made. He supposed it was the civilized way of doing things. At any rate, Cindy seemed to have regained her composure with remarkable speed. Seated in the chair she had been occupying earlier, she was inspecting her face in a compact, repairing her make-up. He even had the impression that her thoughts had moved away from here; at the corners of her mouth there was the hint of a smile. In situations like this, Mel thought, women were supposed to be more emotional than men, but Cindy didn't show any signs of it, yet he himself was close to tears.

He was aware of sounds—voices and people moving—in the office outside. There was a knock. Mel called, "Come in."

It was Lieutenant Ordway. He entered, closing the door behind him. When he saw Cindy, he said, "Oh, excuse me, Mrs. Bakersfeld."

Cindy glanced up, then away, without answering. Ordway, sensitive to atmosphere, stood hesitantly. "Perhaps I should come back."

Mel asked, "What is it, Ned?"

"It's the anti-noise demonstration; those Meadowood people. There are a couple of hundred in the main concourse; more coming in. They all wanted to see you, but I've talked them into sending a delegation, the way you suggested. They selected half a dozen, and there are three newspaper reporters; I said the reporters could come too." The policeman nodded toward the anteroom. "They're all waiting outside."

He would have to see the delegation, Mel knew. He had never felt less like talking to anyone.

"Cindy," he pleaded, "this won't take long. Will you wait?" When she didn't answer, he added, "Please!"

She continued to ignore them both.

"Look," Ordway said, "if this is a bad time, I'll tell these people they'll have to come back some other day."

Mel shook his head. The commitment had been made; it was his own suggestion. "You'd better bring them in." As the policeman turned away, Mel added, "Oh, I haven't talked to that woman . . . I've forgotten her name."

"Guerrero," Ordway said. "And you don't have to. She looked as if she was leaving when I came in."

A few moments later the half dozen people from Meadowood—four men and two women—began filing in. The press trio followed. One of the reporters was from the *Tribune*—an alert, youngish man named Tomlinson who usually covered the airport and general aviation beat for his paper; Mel knew him well and respected his accuracy and fairness. Tomlinson's by-line also appeared occasionally in national magazines. The other two reporters were also known slightly to Mel—one a young man from the *Sun-Times*, the other an older woman from a local weekly.

Through the open doorway, Mel could see Lieutenant Ordway talking to the woman outside, Mrs. Guerrero, who was standing, fastening her coat.

Cindy remained where she was.

"Good evening." Mel introduced himself, then motioned to settees and chairs around his office. "Please sit down."

"Okay, we will," one of the men in the delegation said. He was expensively well-dressed, with precisely combed, gray-streaked hair, and seemed to be the group's leader. "But I'll tell you we're not here to get cozy. We've some plain, blunt things to say and we expect the same kind of answers, not a lot of double-talk."

"I'll try not to give you that. Will you tell me who you are?"

"My name is Elliott Freemantle. I'm a lawyer. I represent these people, and all the others down below."

"All right, Mr. Freemantle," Mel said. "Why don't you begin?"

The door to the anteroom was still open. The woman who had been outside, Mel noticed, had gone. Now, Ned Ordway came in, closing the office door.

Trans America Airlines Flight Two was twenty minutes out of Lincoln International, and in a steady climb which would continue until reaching thirty-three thousand feet near Detroit, in eleven more minutes. Already the flight was on its airway and great circle course for Rome. For the past several minutes the aircraft had been in smooth air, the storm clouds and accompanying turbulence now far below. A three-quarter moon hung above and ahead like a lopsided lantern; all around, the stars were sharp and clear.

On the flight deck, initial pressures were over. Captain Harris had made a progress announcement to the passengers over the p.a. system. The three pilots were settling down to routines of their long flight.

Under the second officer's table, behind Captain Harris and Demerest, a chime sounded loudly. At the same instant, on a radio panel forward of the throttles, an amber light winked on. Both chime and light indicated a radio call on Selcal radio system through which most airliners could be called individually, as if by private telephone. Each aircraft, of Trans America and other major airlines, had its own separate call code, transmitted and received automatically. The signals which had just been actuated for aircraft N-731-TA would be seen or heard on no other flight.

Anson Harris switched from the radio to which he had been listening on air route control frequency, and acknowledged, "This is Trans America Two."

"Flight Two, this is Trans America dispatcher, Cleveland. I have a message for the captain from D.T.M., IJA. Advise when ready to copy."

Vernon Demerest, Harris observed, had also changed radio frequencies. Now Demerest pulled a notepad toward him and nodded.

Harris instructed, "We're ready, Cleveland. Go ahead."

The message was that which Tanya Livingston had written concerning Flight Two's stowaway, Mrs. Ada Quonsett. As it progressed, with the description of the little old lady from

San Diego, both captains began smiling. The message ended by asking confirmation that Mrs. Quonsett was aboard.

"We will check and advise," Harris acknowledged. When the transmission ended, he clicked the radio controls back to air route control frequency.

Vernon Demerest, and Second Officer Jordan who had heard the message from an overhead speaker near his seat, were laughing aloud.

The second officer declared, "I don't believe it!"

"I believe it." Demerest chuckled. "All those boobs on the ground, and some ancient old duck fooled them all!" He pushed the call button for the forward galley phone. "Hey!" he said, when one of the stewardesses answered. "Tell Gwen we want her in the office."

He was still chuckling when the flight deck door opened. Gwen Meighen came in.

Demerest read Gwen the Selcal message with Mrs. Quonsett's description. "Have you seen her?"

Gwen shook her head. "I've hardly been back in tourist yet."

"Go back," Demerest told her, "and see if the old woman's there. She shouldn't be hard to spot."

"If she is, what do you want me to do?"

"Nothing. Just come back and report."

Gwen was gone only a few minutes. When she returned, she was laughing like the others.

Demerest swung around in his seat. "Is she there?"

Gwen nodded. "Yes, in seat fourteen-B. She's just the way the message said, only more so."

The second officer asked, "How old?"

"At least seventy-five; probably nearer eighty. And she looks like something out of Dickens."

Over his shoulder, Anson Harris said, "More like *Arsenic and Old Lace*."

"Is she really a stowaway, Captain?"

Harris shrugged. "On the ground they say so. And I guess it explains why your head count was wrong."

"We can easily find out for sure," Gwen volunteered. "All I have to do is go back again and ask to see her ticket counterfoil."

"No," Vernon Demerest said. "Let's not do that."

As best they could in the darkened cockpit the com-

his eyes to the flight instruments; Second Officer Jorda swung back to his fuel charts.

"Hold on," Demerest told Gwen. While she waited, made a check point report on company radio.

"All we were told to do," Demerest said when he finished the report, "was to see if the old lady's aboard. O... she is; and that's what I'll tell Flight Dispatch. I guess they'll have someone waiting for her at Rome; we can't do anything about that, even if we wanted to. But if the old girl's made it this far, and since we're not turning back, why make her next eight hours miserable? So leave her alone. Maybe, just before we get to Rome, we'll let her know she's been found out; then it won't be a whole big shock. But for the time being, let her enjoy her flight. Give Grandma some dinner, and she can watch the movie in peace."

"You know," Gwen said; she was watching him thoughtfully. "There are times when I quite like you."

As Gwen left the flight deck, Demerest—still chuckling—changed radio channels and reported back himself to Cleveland dispatcher.

Anson Harris, who had his pipe alight, looked up adjusting the auto-pilot and said drily, "I didn't think were much of a one for the old ladies." He emphasized "old."

Demerest grinned. "I prefer younger ones."

"So I'd heard."

The stowaway report, and his reply, had put Demerest in thoroughly good humor. More relaxed than earlier, he added, "Opportunities change. Pretty soon you are going to have to settle for the not-so-young ones."

"I already have." Harris puffed at his pipe. "Some time."

Both pilots had one earpiece of their radio headsets upward. They could converse normally, yet hear radio any came in. The noise level of the flight deck was but not overwhelming—was sufficient to give the pilots privacy.

"You've always played it straight down the middle, haven't you?" Demerest said. "With your wife, I mean. Around; on layovers I've seen you reading books. This time Harris grinned. "Sometimes I go to the airport for a special reason?"

—on DC-4s; the

met. She knew what went on: the sleeping around, pregnancies, abortions, all that stuff. Later, she got to be a supervisor and had to deal with a lot of it in her job. Anyway, when we were married I made her a promise—the obvious one. I've always kept it."

"I guess all those kids you had helped."

"Maybe."

Harris made another minute adjustment to the auto-pilot. As they talked, the eyes of both pilots, out of training and habit, swept the illuminated banks of instruments in front of them, as well as those to each side and above. An incorrect instrument reading would show at once if anything in the aircraft was malfunctioning. Nothing was.

Demerest said, "How many children is it? Six?"

"Seven." Harris smiled. "Four we planned, three we didn't. But it all worked out."

"The ones you didn't plan—did you ever consider doing anything about them? Before they were born?"

item to others already noted. When the ground-to-air exchange ended, Demerest urged Anson Harris, "Go ahead."

Harris checked their course and altitude, then began refilling his pipe.

"I've studied a lot of history. I got interested in college and followed through after. Maybe you've done the same."

"No," Demerest said. "Never more than I had to."

"Well, if you go through it all—history, that is—one thing stands out. Every bit of human progress has happened for a single, simple reason: the elevation of the status of the individual. Each time civilization has stumbled into another age that's a little better, a bit more enlightened, than the one before it, it's because people cared more about other people and respected them as individuals. When they haven't cared, those have been the times of slipping backward. Even a short world history—if you read one—will prove it's true."

"I'll take your word for it."

"You don't have to. There are plenty of examples. We abolished slavery because we respected individual human life. For the same reason we stopped hanging children, and around the same time we invented habeas corpus, and now we've created justice for all, or the closest we can come to it. More recently, most people who think and reason are against capital punishment, not so much because of those to be executed, but for what taking a human life—any human life—does to society, which is all of us."

Harris stopped. Straining forward against his seat harness, he looked outward from the darkened cockpit to the night surrounding them. In bright moonlight he could see a swirl of darkened cloudtops far below. With a forecast of unbroken cloud along the whole of their route until mid-Atlantic, there would be no glimpses tonight of lights on the ground. Several thousand feet above, the lights of another aircraft, traveling in an opposite direction, flashed by and were gone.

From his seat behind the other two pilots, Second Officer Cy Jordan reached forward, adjusting the throttle settings to compensate for Flight Two's increased altitude.

Demerest waited until Jordan had finished, then protested to Anson Harris, "Capital punishment is a long way from abortion."

"Not really," Harris said. "Not when you think about it. It all relates to respect for individual human life; to the way civilization's come, the way it's going. The strange thing is,

you hear people argue for abolition of capital punishment, then for legalized abortion in the same breath. What they don't see is the anomaly of raising the value of human life on one hand, and lowering it on the other."

Demerest remembered what he had said to Gwen this evening. He repeated it now. "An unborn child doesn't have life—not an individual life. It's a fetus; it isn't a person."

"Let me ask you something," Harris said. "Did you ever seen an aborted child? Afterward, I mean."

"No."

"I did once. A doctor I know showed it to me. It was in a glass jar, in formaldehyde; my friend kept it in a cupboard. I don't know where he got it, but he told me that if the baby had lived—not been aborted—it would have been a normal child, a boy. It was a fetus, all right, just the way you said, except it had been a human being, too. It was all there; everything perfectly formed; a good-looking face, hands, feet, toes, even a little penis. You know what I felt when I saw it? I felt ashamed; I wondered where the hell was I; where were all other decent-minded, sensitive people when this kid, who couldn't defend himself, was being murdered? Because that's what happened; even though, most times, we're afraid to use the word."

"Hell! I'm not saying a baby should be taken out when it's that far along."

"You know something?" Harris said. "Eight weeks after conception, everything's present in a fetus that's in a full-term baby. In the third month the fetus *looks* like a baby. So where do you draw the line?"

Demerest grumbled, "You should have been a lawyer, not a pilot." Just the same, he found himself wondering how far Gwen was along, then reasoned: if she conceived in San Francisco, as she assured him, it must be eight or nine weeks ago. Therefore, assuming Harris's statements to be true, there was almost a shaped baby now.

It was time for another report to air route control. Vernon Demerest made it. They were at thirty-two thousand feet, near the top of their climb, and in a moment or two would cross the Canadian border and be over southern Ontario. Detroit and Windsor, the twin cities straddling the border, were ordinarily a bright splash of light, visible for miles ahead. Tonight there was only darkness, the cities shrouded and somewhere down below to starboard. Demerest remem-

saying, Vernon, is that if we plan to progress we ought to value them a little more."

The altimeters—one in front of each pilot—touched thirty-three thousand feet. They were at the top of their climb. Anson Harris eased the aircraft into level flight while Second Officer Jordan reached forward again to adjust the throttles.

Demerest said sourly to Harris, "Your trouble is cobwebs in the brain." He realized he had started the discussion; now, angrily, he wished he hadn't. To end the subject, he reached for the stewardess call button. "Let's get some hors d'oeuvres before the first class passengers wolf them all."

Harris nodded. "Good idea."

A minute or two later, in response to the telephoned order, Gwen Meighen brought three plates of aromatic hors d'oeuvres, and coffee. On Trans America, as on most airlines, captains got the fastest service.

"Thanks, Gwen," Vernon Demerest said; then, as she leaned forward to serve Anson Harris, his eyes confirmed what he already knew. Gwen's waist was as slim as ever, no sign of anything yet; nor would there be, no matter what was going on inside. The heck with Harris and his old woman's arguments! Of course Gwen would have an abortion—just as soon as they got back.

Some sixty feet aft of the flight deck, in the tourist cabin, Mrs. Ada Quonsett was engaged in spirited conversation with the passenger on her right, whom she had discovered was an amiable, middle-aged oboe player from the Chicago Symphony. "What a wonderful thing to be a musician, and so creative. My late husband loved classical music. He fiddled a little himself, though not professionally, of course."

Mrs. Quonsett was feeling warmed by a Dry Sack sherry for which her oboist friend had paid, and he had just inquired if she would like another. Mrs. Quonsett beamed, "Well, it's exceedingly kind of you, and perhaps I shouldn't, but I really think I will."

The passenger on her left—the man with the little sandy mustache and scrawny neck—had been less communicative; in fact, disappointing. Mrs. Quonsett's several attempts at conversation had been barely audible, while the claspings his attaché case o

For a while, when they

sett, wondered if the left-seat passenger might unbend. But he hadn't. He accepted Scotch from the stewardess, paid for it with a lot of small change that he had to count out, then tossed the drink down almost in a gulp. Her own sherry mellowed Mrs. Quonsett immediately, so that she thought: Poor man, perhaps he has problems, and I shouldn't bother him.

She noticed, however, that the scrawny-necked man came suddenly alert when the captain made his announcement, soon after takeoff, about their speed, course, time of flight and all those other things which Mrs. Quonsett rarely bothered listening to. The man on her left, though, scribbled notes on the back of an envelope and afterward got out one of those *Chart Your Own Position* maps, which the airline supplied, spreading it on top of his attaché case. He was studying the map now, and making pencil marks, in between glances at his watch. It all seemed rather silly and childish to Mrs. Quonsett, who was quite sure that there was a navigator up front, taking care of where the airplane ought to and when.

Mrs. Quonsett then returned her attention to the oboist who was explaining that not until recently, when he had been a public seat during a Bruckner symphony performance, he realized that at a moment when his section of the orchestra was going "pom-tiddey-pom-pom," the cellos were ending "ah-diddley-ah-dah." He mouthed both passages in order to illustrate his point.

"Really! How remarkably interesting; I'd never thought of it," Mrs. Quonsett exclaimed. "My late husband would have so enjoyed meeting you, though of course you are very much younger."

She was now well into the second sherry and enjoying herself thoroughly. She thought: she had chosen such a nice flight; such a fine airplane and crew, the stewardesses polite and helpful, and with delightful passengers, except for the man on her left, who didn't really matter. Soon, dinner would be served and later, she had learned, there was to be a movie with Michael Caine, one of her favorite stars. What more could anyone possibly ask?

Mrs. Quonsett had been wrong in assuming that there was a navigator up front on the flight deck. There wasn't. Trans

America, like most major airlines, no longer carried navigators, even on overseas flights, because of the multitude of radar and radio systems available on modern jet aircraft. The pilots, aided by constant air route control surveillance, did what little navigation was needed.

However, had there been an old-time air navigator aboard Flight Two, his charted position of the aircraft would have been remarkably similar to that which D. O. Guerrero had achieved by rough-and-ready reckoning. Guerrero had estimated several minutes earlier that they were close to Detroit; the estimate was right. He knew, because the captain had said so in his announcement to passengers, that their subsequent course would take them over Montreal; Fredericton, New Brunswick; Cape Ray; and later St. John's, Newfoundland. The captain had even been helpful enough to include the aircraft's ground speed as well as airspeed, making Guerrero's further calculations just as accurate.

The east coast of Newfoundland, D. O. Guerrero calculated, would be passed over in two-and-a-half hours from the present time. However, before then, the captain would probably make another position announcement, so the estimate could be revised if necessary. After that, as already planned, Guerrero would wait a further hour to ensure that the flight was well over the Atlantic Ocean before pulling the cord on his case and exploding the dynamite inside. At this moment, in anticipation, his fingers claspings the attaché case tensed.

Now that the time of culmination was so close, he wanted it to come quickly. Perhaps, after all, he thought, he would not wait the full time. Once they had left Newfoundland, really any time would do.

The shot of whisky had relaxed him. Although most of his earlier tension had disappeared on coming aboard, it had built up again soon after takeoff, particularly when the irritating old cat in the next seat had tried to start a conversation. D. O. Guerrero wanted no conversation, either now or later; in fact, no more communication with anyone else in this life. All that he wanted was to sit and dream—of three hundred thousand dollars, a larger sum than he had ever possessed at one time before, and which would be coming to Inez and the . . . in a matter of days.

Right now

money left to pay for it. After his unexpectedly large insurance purchase, there had been barely enough small change for the single drink; so he would have to do without.

As he had earlier, he closed his eyes. This time he was thinking of the effect on Inez and the children when they heard about the money. They ought to care about him for what he was doing, even though they wouldn't know the whole of it—that he was sacrificing himself, giving his own life for them. But perhaps they might guess a little. If they did, he hoped they would be appreciative, although he wondered about that, knowing from experience that people could be surprisingly perverse in reactions to what was done on their behalf.

The strange thing was: In all his thoughts about Inez and the children, he couldn't quite visualize their faces. It seemed most as though he were thinking about people whom he'd never really known.

He compromised by conjuring up visions of dollar signs, lowered by threes, and endless zeros. After a while he must have dropped off to sleep because, when he opened his eyes quick glance at his watch showed that it was twenty minutes later, and a stewardess was leaning over from the aisle. The stewardess—an attractive brunette who spoke with English accent—was asking, "Are you ready for dinner, ? If so, perhaps you'd like me to take your case."

4

From their initial moment of meeting, Mel Bakersfield formed an instinctive dislike of the lawyer, Elliott Freemantle, who was leading the delegation of Meadowood residents. Now, ten minutes or so after the delegation filed into Mel's office, the dislike was sharpening to downright loathing.

It seemed as if the lawyer was deliberately being as obnoxious as possible. Even before the discussion opened, there had been Freemantle's unpleasant remark about not wanting a lot of doubletalk," which Mel parried mildly, though retorting it. Since then, every rejoinder of Mel's had been met with equal rudeness and skepticism. Mel's instinct

cautioned him that Freemantle was deliberately baiting him, hoping that Mel would lose his temper and make intemperate statements, with the press recording them. If it was the lawyer's strategy, Mel had no intention of abetting it. With some difficulty, he continued to keep his own manner reasonable and polite.

Freemantle had protested what he termed, "the callous indifference of this airport's management to the health and well-being of my clients, the good citizen families of Meadowood."

Mel replied quietly that neither the airport nor the airlines using it had been callous or indifferent. "On the contrary we have recognized that a genuine problem about noise exists and have done our best to deal with it."

"Then your best, sir, is a miserable, weak effort! And you've done *what*?" Lawyer Freemantle declared, "So far as my clients and I can see—and hear—you've done no more than make empty promises which amount to nothing. It's perfectly evident—and the reason we intend to proceed to law—is that no one around here really gives a damn."

The accusation was untrue, Mel countered. There had been a planned program of avoiding takeoffs on runway two five—which pointed directly at Meadowood—whenever an alternate runway could be used. Thus, two five was used mostly for landings only, creating little noise for Meadowood, even though entailing a loss in operating efficiency for the airport. In addition, pilots of all airlines had instructions to use noise abatement procedures after any takeoff in the general direction of Meadowood, on whatever runway, including turns away from Meadowood immediately after leaving the ground. Air traffic control had cooperated in all objectives.

Mel added, "What you should realize, Mr. Freemantle, is that this is by no means the first meeting we have had with local residents. We've discussed our mutual problems many times."

Elliott Freemantle snapped, "Perhaps at the other times there was not enough plain speaking."

"Whether that's true or not, you seem to be making up for it now."

"We intend to make up for a good deal—of lost time, wasted effort and bad faith, the latter not on my clients' part."

Mel decided not to respond. There was nothing to be

gained, for either side, by this kind of harangue—except, perhaps, publicity for Elliott Freemantle. Mel observed that the reporters' pencils were racing; one thing which the lawyer clearly understood was what made lively copy for the press.

As soon as he decently could, Mel resolved, he would cut this session short. He was acutely conscious of Cindy, still seated where she had been when the delegation came in, though now appearing bored, which was characteristic of Cindy whenever anything came up involving airport affairs. This time, however, Mel sympathized with her. In view of the seriousness of what they had been discussing, he was finding this whole Meadowood business an intrusion himself.

In Mel's mind, too, was his recurring concern for Keith. He wondered how things were with his brother, over in air traffic control. Should he have insisted that Keith quit work tonight, and pursued their discussion which—until the tower watch chief's intervention cut it off—had seemed to be getting somewhere? Even now, perhaps, it was not too late . . . But then there was Cindy, who certainly had a right to be considered ahead of Keith; and now this waspish lawyer, Freemantle, still ranting on . . .

"Since you chose to mention the so-called noise abatement procedures," Elliott Freemantle inquired sarcastically, "may I ask what happened to them tonight?"

Mel sighed. "We've had a storm for three days." His glance flicked to the others in the delegation. "I'm sure you're all aware of it. It's created emergency situations." He explained the blockage of runway three zero, the temporary need for takeoffs on runway two five, with the inevitable effect on Meadowood.

"That's all very well," one of the other men said. He was a heavy-jowled, balding man whom Mel had met at other discussions about airport noise. "We know about the storm, Mr. Makersfeld. But if you're living directly underneath, knowing that airplanes are coming over doesn't make anyone feel better, storm or not. By the way, my name is Floyd Zanetta. I was chairman of the meeting . . ."

Elliott Freemantle cut in smoothly. "If you'll excuse me, there's another point before we go on." Obviously the lawyer had no intention of relinquishing control of the delegation, even briefly. He addressed Mel, with a sideways glance at the others. "It isn't solely noise that's filling homes and ears of Meadowood, though that's bad enough—shattering nerves,

destroying health, depriving children of their needed sleep. But there is a physical invasion . . ."

This time Mel interrupted. "Are you seriously suggesting that as an alternative to what's happened tonight, the airport should close down?"

"Not only am I suggesting that you do it; we may compel you. A moment ago I spoke of a physical invasion. It is that which I will prove, before the courts, on behalf of my clients. And we will win!"

The other members of the delegation, including Floyd Zanetta, gave approving nods.

While waiting for his last words to sink home, Elliott Freemantle deliberated. He supposed he had gone almost far enough. It was disappointing that the airport general manager hadn't blown a fuse, as Freemantle had been carefully goading him to do. The technique was one which he had used before, frequently with success, and it was a good technique because people who lost their tempers invariably came off worse in press reports, which was what Freemantle was mainly concerned about. But Bakersfeld, though clearly annoyed, had been too smart to fall for that ploy. Well, never mind, Elliott Freemantle thought; he had been successful just the same. He, too, had seen the reporters industriously getting his words down—words which (with the sneer and hectoring tone removed) would read well in print; even better, he believed, than his earlier speech at the Meadowood meeting.

Of course, Freemantle realized, this whole proceeding was just an exercise in semantics. Nothing would come of it. Even if the airport manager, Bakersfeld, could be persuaded to their point of view—a highly unlikely happening—there was little or nothing he could do about it. The airport was a fact of life and nothing would alter the reality of it being where and how it was. No, the value of being here at all tonight was partly in gaining public attention, but principally (from Lawyer Freemantle's viewpoint) to convince the Meadowood populace that they had a stalwart champion, so that those legal retainer forms (as well as checks) would keep on flowing into the offices of Freemantle and Sye.

It was a pity, Freemantle thought, that the remainder of the crowd from Meadowood, who were waiting downstairs, could not have heard him up here, dishing out the rough stuff—on their behalf—to Bakersfeld. But they would read about it in tomorrow's papers; also, Elliott Freemantle was

not at all convinced that what was happening here and now would be the last Meadowood item on tonight's airport agenda. He had already promised the TV crews, who were waiting down below because they couldn't make it in here with their equipment, a statement when this present session was over. He had hopes that by now—because he had suggested it—the TV cameras would be set up in the main terminal concourse, and even though that Negro police lieutenant had forbidden any demonstration there, Freemantle had an idea that the TV session, astutely managed, might well develop into one.

Elliott Freemantle's statement of a moment ago had conceded legal action—the action which, he had assured Meadow residents earlier this evening, would be his principal duty on their behalf. "My business is law," he had told them. "Law and nothing else." It was not true, of course; then, Elliott Freemantle's policies were apt to back and as expediency demanded.

"What legal action you take," Mel Bakersfeld pointed out, naturally your own affair. All the same, I would remind you that the courts have upheld the rights of airports to operate, despite adjoining communities, as a matter of public convenience and necessity."

Freemantle's eyebrows shot up. "I didn't realize that you were a lawyer too."

"I'm not a lawyer. I'm also quite sure you're aware of it."

"Well, for a moment I was beginning to wonder." Elliott Freemantle smirked. "Because I am, you see; and with some experience in these matters. Furthermore, I assure you that there are legal precedents in my clients' favor." As he had at the meeting earlier, he rattled off the impressive-sounding names of cases—*U.S. v. Causby*, *Griggs v. County of Allegheny*, *Warrenburg v. Port of Portland*, *Martin v. Port of Seattle*.

Mel was amused, though he didn't show it. The cases were familiar to him. He also knew of others, which had produced drastically different judgments, and which Elliott Freemantle was either unaware of or had sagaciously avoided mentioning. Mel suspected the latter, but had no intention of getting into a legal debate. The place for that, if and when it opened, was in court.

However, Mel saw no reason why the lawyer—whom he disliked even more intensely—should have everything his own way. Speaking to the delegation generally, Mel ex-

plained his reason for avoiding legal issues, but added, "Since we are all here, there are some things I would like to say to you on the subject of airports and noise generally."

Cindy, he observed, was yawning.

Freemantle responded instantly. "I doubt if that will be necessary. The next step so far as we are concerned . . ."

"Oh!" For the first time Mel dispensed with mildness, and bore down heavily. "Am I to understand that after I've listened patiently to you, you and your group are not prepared to extend the same courtesy?"

The delegate, Zanetta, who had spoken before, glanced at the others. "I do think we ought . . ."

Mel said sharply, "Let Mr. Freemantle answer."

"There's really no need"—the lawyer smiled suavely—"for anyone to raise their voice, or be discourteous."

"In that case, why have you been doing both those things ever since you came in?"

"I'm not aware . . ."

"Well, I *am* aware."

"Aren't you losing your temper, Mr. Bakersfeld?"

"No," Mel smiled. "I'm sorry to disappoint you, but I'm not." He was conscious of having seized an advantage, catching the lawyer by surprise. Now he went on, "You've had a good deal to say, Mr. Freemantle, and not much of it politely. But there are a few things I'd like to get on the record, too. Also, I'm sure the press will be interested in both sides even if no one else is."

"Oh, we're interested all right. It's just that we've heard all the wishy-washy excuses already." As usual, Elliott Freemantle was recovering fast. But he admitted to himself that he had been lulled by Bakersfeld's earlier mild manner, so that the sharp counterattack caught him unawares. He realized that the airport general manager was more astute than he appeared.

"I didn't say anything about excuses," Mel pointed out. "I suggested a review of airport noise situations generally."

Freemantle shrugged. The last thing he wanted was to open up some new approach which might be newsworthy and, therefore, divert attention from himself. At the moment, though, he didn't see how he could prevent it.

"Ladies and gentlemen," Mel began, "when you first came here tonight something was said about plain, blunt speaking

on both sides. Mr. Freemantle has had his turn at that; now I will be equally candid."

Mel sensed he had the full attention of the two women and four men in the delegation; also of the press. Even Cindy was watching him covertly. He continued to speak quietly.

"All of you know, or should, the measures which we have taken at Lincoln International Airport to make life easier, more bearable, from the point of view of aircraft noise, for those who live in the airport vicinity. Some of these measures have been mentioned already, and there are others, such as using remote airport areas for the testing of engines, and even then during proscribed hours only."

Elliott Freemantle, already fidgeting, cut in. "But you've admitted that these so-called systems fail to work."

Mel snapped back, "I admitted nothing of the kind. Most of the time they *do* work—as well as any compromise can. Tonight I've admitted that they are not working because of exceptional circumstances, and frankly if I were a pilot, taking off in weather like this, I'd be reluctant to reduce power right after takeoff, and make a climbing turn too. Furthermore, this kind of condition is bound to recur from time to time."

"Most of the time!"

"No, sir! And please allow me to finish!" Without pausing, Mel went on, "The fact is: airports—here and elsewhere—have come close to doing as much as they can in the way of noise reduction. You may not like hearing this, and not everyone in this business admits it, but the truth is: there isn't a lot more that anyone can do. You simply cannot tiptoe a three hundred thousand pound piece of high-powered machinery into any place. So when you do bring a big jet airplane in—or take it out—inevitably it shakes hell out of a few people who are nearby." There were several quick smiles, though not from Elliott Freemantle, who was scowling. Mel added, "So if we need airports—and obviously we do—somebody, somewhere has to put up with some noise, or move away."

It was Mel's turn to see the reporters' pencils racing with his words.

"It's true," Mel continued, "that aircraft manufacturers are working on noise reduction devices, but—again to be honest with you—few people in the aviation industry take them

seriously, and certainly they do not represent a major effort like, for example, development of a new aircraft. At best, they'll be palliatives. If you don't believe me, let me remind you that even though trucks have been in use for many years more than airplanes, no one has yet invented a really effective truck muffler.

"Another thing to bear in mind is that by the time one type of jet engine gets quieted a little—if it ever does—there'll be new, more powerful engines in use which, even with suppressors fitted, will be noisier than the first engine was to begin with. As I said," Mel added, "I am being absolutely frank."

One of the women in the delegation murmured gloomily, "You sure are."

"Which brings me," Mel said, "to the question of the future. There are new breeds of aircraft coming—another family of jets after the Boeing 747s, including behemoths like the Lockheed 500, which will come into use soon; then, shortly afterward, the supersonic transports—the Concordé, and those to follow. The Lockheed 500 and its kind will be subsonic—that is, they'll operate at less than the speed of sound, and will give us the kind of noise we have now, only more of it. The supersonics will have a mighty engine noise too, *plus* a sonic boom as they breach the sound barrier, which is going to be more of a problem than any other noise we've had so far.

"You may have heard or read—as I have—optimistic reports that the sonic booms will occur high, far from cities and airports, and that the effect on the ground will be minor. Don't believe it! We're in for trouble, all of us—people in homes, like you; people like me, who run airports; airlines, who'll have a billion dollars invested in equipment which they must use continuously, or go bankrupt. Believe me, the time is coming when we'll wish we had the simplicity of the kind of noise we're talking about tonight."

"So what are you telling my clients?" Elliott Freemantle inquired sarcastically. "To go jump in the lunatic asylum now, rather than wait until you and your behemoths drive them there?"

"No," Mel said firmly, "I'm not telling them that. I'm merely saying candidly—the way you asked me to—that I haven't any simple answers; nor will I make you promises that the airport cannot keep. Also I'm saying that in my

opinion, airport noise is going to become greater, not less. However, I'd like to remind all of you that this problem isn't new. It's existed since trains started running, and since trucks, buses, and automobiles joined them; there was the same problem when freeways were built through residential areas; and when airports were established, and grew. All these things are for the public good—or so we believe—yet all of them create noise and, despite all kinds of efforts, they've continued to. The thing is: trucks, trains, freeways, airplanes, and the rest are here. They're part of the way we live, and unless we change our way of life, then their noise is something we have to live with too."

"In other words, my clients should abandon any idea of serenity, uninterrupted sleep, privacy and quietness for the remainder of their natural lives?"

"No," Mel said. "I think, in the end, they'll have to move. I'm not speaking officially, of course, but I'm convinced that eventually this airport and others will be obliged to make multibillion-dollar purchases of residential areas surrounding them. A good many of the areas can become industrial zones where noise won't matter. And of course, there would be reasonable compensation to those who owned homes and were forced to leave them."

Elliott Freemantle rose and motioned others in the delegation to do the same.

"That last remark," he informed Mel, "is the one sensible thing I've heard this evening. However, the compensation may start sooner than you think, and also be larger." Freemantle nodded curtly. "You will be hearing from us. We shall see you in court."

He went out, the others following.

Through the door to the anteroom Mel heard one of the two women delegates exclaim, "You were magnificent, Mr. Freemantle. I'm going to tell everyone so."

"Well, thank you. Thank you very . . ." The voices faded.

Mel went to the door, intending to close it.

"I'm sorry about that," he said to Cindy. Now that the two of them were alone again, he was not sure what else they had to say to each other, if anything.

Cindy said icily, "It's par for the course. You should have married an airport."

At the doorway, Mel noticed that one of the men re-

reporters had returned to the anteroom. It was Tomlinson of the Tribune.

"Mr. Bakersfeld, could I see you for a moment?"

Mel said wearily, "What is it?"

"I got the impression you weren't too smitten with Mr. Freemantle."

"Is this for quotation?"

"No, sir."

"Then your impression was right."

"I thought you'd be interested in this," the reporter said.

"This" was one of the legal retainer forms which Elliott Freemantle had distributed at the Meadowood community meeting.

As Mel read the form, he asked, "Where did you get it?"

The reporter explained.

"How many people were at the meeting?"

"I counted. Roughly six hundred."

"And how many of these forms were signed?"

"I can't be sure of that, Mr. Bakersfeld. My guess would be a hundred and fifty were signed and turned in. Then there were other people who said they'd send theirs by mail."

Mel thought grimly: now he could understand Elliott Freemantle's histrionics; also why and whom the lawyer was trying to impress.

"I guess you're doing the same arithmetic I did," the reporter, Tomlinson, said.

Mel nodded. "It adds up to a tidy little sum."

"Sure does. I wouldn't mind a piece of it myself."

"Maybe we're both in the wrong business. Did you cover the Meadowood meeting too?"

"Yes."

"Didn't anyone over there point out that the total legal fee was likely to be at least fifteen thousand dollars?"

Tomlinson shook his head. "Either no one thought of it, or they didn't care. Besides, Freemantle has quite a personality; hypnotic, I guess you'd call it. He had 'em spell-bound, like he was Billy Graham."

Mel handed back the printed retainer form. "Will you put this in your story?"

"I'll put it in, but don't be surprised if the city desk kills it. They're always wary about professional legal stuff. Besides, I guess if you come right down to it, there's nothing really wrong."

"No," Mel said, "it may be unethical, and I imagine the bar association wouldn't like it. But it isn't illegal. What the Meadowood folk should have done, of course, was get together and retain a lawyer as a group. But if people are gullible, and want to make lawyers rich, I guess it's their own affair."

Tomlinson grinned. "May I quote some of that?"

"You just got through telling me your paper wouldn't print it. Besides, this is off the record. Remember?"

"Okay."

If it would have done any good, Mel thought, he would have sounded off, and taken a chance on being quoted or not. But he knew it wouldn't do any good. He also knew that all over the country, ambulance chasing lawyers like Elliott Freemantle were busily signing up groups of people, then harassing airports, airlines, and—in some cases—pilots.

It was not the harassing which Mel objected to; that, and legal recourse, were everyone's privilege. It was simply that in many instances the homeowner clients were being misled, buoyed up with false hopes, and quoted an impressive-sounding, but one-sided selection of legal precedents such as Elliott Freemantle had used tonight. As a result, a spate of legal actions—costly and time-consuming—was being launched, most of which were foredoomed to fail, and from which only the lawyers involved would emerge as beneficiaries.

Mel wished that he had known earlier what Tomlinson had just told him. In that case he would have loaded his remarks to the delegation, so as to convey a warning about Elliott Freemantle, and what the Meadowood residents were getting into. Now it was too late.

"Mr. Bakersfeld," the *Tribune* reporter said, "there are some other things I'd like to ask you—about the airport generally. If you could spare a few minutes . . ."

"Any other time I'll be glad to." Mel raised his hands in a helpless gesture. "Right now there are fifteen things happening at once."

The reporter nodded. "I understand. Anyway, I'll be around for a while. I hear Freemantle's bunch are cooking up something down below. So if there's a chance later . . ."

"I'll do my best," Mel said, though he had no intention of being available any more tonight. He respected Tomlinson's wish to dig below the surface of any story which he covered

st the same, Mel had seen enough of delegations *and* reporters for one evening.

As to whatever else it was that Freemantle and the Meadowood people were "cooking up down below," he would leave it to them. Worrying about that, Mel decided, to Lieutenant Ordway and his policemen.

5

When Mel turned, after closing the door of his office as the *tribune* reporter left, Cindy was standing, pulling on her gloves. She remarked acidly, "Fifteen things happening, I believe you said. Whatever the other fourteen are, I'm sure they'll all take priority over me."

"That was a figure of speech," Mel protested, "as you know perfectly well. I already said I'm sorry. I didn't know this was going to happen—at least, not all at once."

"But you love it, don't you? All of it. Much more than me, home, the children, a decent social life."

"Ah!" Mel said. "I wondered when you'd get to that." He topped. "Oh, hell! Why are we fighting again? We settled everything, didn't we? There's no need to fight any more."

"No," Cindy said. She was suddenly subdued. "No, I suppose not."

There was an uncertain silence. Mel broke it first.

"Look, getting a divorce is a pretty big thing for both of us; for Roberta and Libby, too. If you've any doubts . . ."

"Haven't we been over that already?"

"Yes; but if you want to, we'll go over it fifty times again."

"I don't want to." Cindy shook her head decisively. "I haven't any doubts. Nor have you, not really. Have you?"

"No," Mel said. "I'm afraid I haven't."

Cindy started to say something, then stopped. She had been going to tell Mel about Lionel Urquhart, but decided against it. There was plenty of time for Mel to find that out for himself, later. As to Derek Eden, whom Cindy had been thinking about during most of the time that the Meadowood delegation had been in the office, she had no intention of disclosing his existence to Mel or Lionel.

There was a knock—light but definite—on the anteroom door.

"Oh, God!" Cindy muttered. "Isn't there *any* privacy?"

Mel called out irritably, "Who is it?"

The door opened. "Just me," Tanya Livingston said. "Mel, I need some advice . . ." As she saw Cindy, she stopped abruptly. "Excuse me. I thought you were alone."

"He will be," Cindy said. "In hardly any time at all."

"Please, no!" Tanya flushed. "I can come back, Mrs. Bakersfeld. I didn't know I was disturbing you."

Cindy's eyes flicked over Tanya, still in Trans America uniform.

"It's probably time we were disturbed," Cindy said. "After all, it's been a good three minutes since the last people left, and that's longer than we usually have together." She swung toward Mel. "Isn't it?"

He shook his head, without answering.

"By the way," Cindy turned back to Tanya. "I'm curious about one thing. How you were so sure who I am."

Momentarily, Tanya had lost her usual poise. Recovering it, she gave a small smile. "I suppose I guessed."

Cindy's eyebrows went up. "Am I supposed to do the same?" She glanced at Mel.

"No," he said. He introduced them.

Mel was aware of Cindy appraising Tanya Livingston. He had not the slightest doubt that his wife was already forming some conclusion about Tanya and himself; Mel had long ago learned that Cindy's instincts about men-women relationships were uncannily accurate. Besides, he was sure that his own introduction of Tanya had betrayed something. Husbands and wives were too familiar with each other's nuances of speech for that not to happen. It would not even surprise him if Cindy guessed about his own and Tanya's rendezvous for later tonight, though perhaps, he reflected, that was carrying imagination too far.

Well, whatever Cindy knew or guessed, he supposed it didn't really matter. After all, she was the one who had asked for a divorce, so why should she object to someone else in Mel's life, however much or little Tanya meant, and he wasn't sure of that himself? But then, Mel reminded himself, that was a logical way of thinking. Women—including Cindy, and probably Tanya—were seldom logical.

The last thought proved right.

"How nice for you," Cindy told him with pseudo sweetness, "that it isn't just dull old delegations who come to you

problems." She eyed Tanya. "You did say you liked him?"

Tanya returned the inspection levelly. "I said I wanted advice."

"Really! What kind of advice? Was it bad advice, or . . . Or perhaps you've forgotten."

"Indy," Mel said sharply, "that's enough! You've got to . . ."

No reason for what? And why is it enough? The man was mocking; he had the impression that in a person she was enjoying herself. "Aren't you always supposed to take enough interest in your problems?" he asked about your friend's problem . . . that is, if there *was* one. Tanya said crisply, "It's about Flight Twenty." She added that it's Trans America's flight to Rome, New York, and is off half an hour ago."

Mel asked, "What about Flight Twenty?"

To tell the truth—Tanya hesitated—"I've got really nothing to say about it."

"That part doesn't matter. Anyway, a few minutes ago I got hold of the gate agent for Flight Two and we went over the manifest and tickets together. He couldn't remember the man with the case, but we narrowed it down to five names."

"And then?"

"Just on a hunch I called our check-in counters to see if anyone remembered anything about any of those five people. At the airport counters, nobody did. But downtown, one of the agents did remember the man—the one with the case. So I know his name; the description fits . . . everything."

"I still don't see what's so extraordinary. He had to check in somewhere. So he checked in downtown."

"The reason the agent remembered him," Tanya said, "is that he didn't have any baggage, except the little case. Also, the agent said, he was extremely nervous."

"Lots of people are nervous . . ." Abruptly Mel stopped. He frowned. "No baggage! For a flight to Rome!"

"That's right. Except for the little bag the man was carrying, the one Inspector Standish noticed. The agent downtown called it a briefcase."

"But nobody goes on that kind of journey without baggage. It doesn't make sense."

"That's what I thought." Again Tanya hesitated. "It doesn't make sense unless . . ."

"Unless what?"

"Unless you happen to know already that the flight you're on will never get to where it's supposed to be going. If you knew that, you'd also know that you wouldn't need any baggage."

"Tanya," Mel said softly, "what are you trying to say?"

She answered uncomfortably, "I'm not sure; that's why I came to you. When I think about it, it seems silly and melodramatic, only . . ."

"Go on."

"Well, supposing that man we've been talking about isn't smuggling at all; at least, in the way we've all assumed. Supposing the reason for him not having any luggage, for being nervous, for holding the case the way Inspector Standish noticed . . . suppose instead of having some sort of contraband in there . . . he has a bomb."

Their eyes held each other's steadily. Mel's mind was speculating, assessing possibilities. To him, also, the idea which Tanya had just raised seemed ridiculous and remote. Yet . . .

in the past, occasionally, such things had happened. The question was: How could you decide if this was another time? The more he thought about it, the more he realized that the entire episode of the man with the attaché case could so easily be innocent; in fact, probably was. If that proved true after a fuss had been created, whoever began the fuss would have made a fool of himself. It was human not to want to do that; yet, with the safety of an airplane and passengers involved, did making a fool of oneself matter? Obviously not. On the other hand, there ought to be a stronger reason for the drastic actions which a bomb scare would involve than merely a possibility, plus a hunch. Was there, Mel wondered, some way conceivably in which a longer hint, even corroboration, might be found?

Offhand, he couldn't think of one.

But there *was* something he could check. It was a long shot, but all that was needed was a phone call. He supposed it seeing Vernon Demerest tonight, with the reminder of the clash before the Board of Airport Commissioners, had made him think of it.

For the second time this evening, Mel consulted his pocket index-list of telephone numbers. Then, using an internal airport telephone on his desk, he dialed the insurance vending booth in the main concourse. The girl clerk who answered was a long-time employee whom Mel knew well.

"Marj," he said, when he had identified himself, "have you written many policies tonight on the Trans America Flight two?"

"A few more than usual, Mr. Bakersfeld. But then we write on all flights; this kind of weather always does that. On Flight Two, I've had about a dozen, and I know Bunnie—that's the other girl on with me—has written some as well."

"What I'd like you to do," Mel told her, "is read me all the names and policy amounts." As he sensed the girl hesitate, "If I have to, I'll call your district manager and get authority. But you know he'll give it to me, and I'd like you to take my word that this is important. Doing it this way, you can save me time."

"All right, Mr. Bakersfeld; if you say it's okay. But it will take a few minutes to get the policies together."

"I'll wait."

Mel heard the telephone put down, the girl apologize to someone at the insurance counter for the interruption. There

rustling of papers, then another girl's voice inquiring, "Is something wrong?"

Covering the telephone mouthpiece, Mel asked Tanya, "What's that name you have—the man with the case?"

She consulted a slip of paper. "Guerrero, or it may be Guerrero; we had it spelled both ways." She saw Mel start.

"Initials D.O."

Mel's hand still cupped the telephone. His mind was concentrating. The woman who had been brought to his office half an hour ago was named Guerrero; he remembered Lieutenant Ordway saying so. She was the one whom the airport police had found wandering in the terminal. According to Ned Ordway, the woman was distressed and crying; the police couldn't get any sense from her. Mel was going to try talking to her himself, but hadn't gotten around to it. He had seen the woman on the point of leaving the outer office as the Meadowood delegation came in. Of course, there might be no connection . . .

Through the telephone, Mel could still hear voices at the insurance booth and, in the background, the noise of the main terminal concourse.

"Tanya," he said quietly, "about twenty minutes ago there was a woman in the outside office—middle-aged, shabbily dressed; she looked wet and draggled. I believe she was around. If she's anywhere outside, bring her in. In any case, if you find her, don't let her get away from you." Tanya looked puzzled. He added, "Her name is Mrs. Guerrero."

As Tanya left the office, the girl clerk at the insurance booth came back on the line. "I have all those policies, Mr. Bakersfeld. Are you ready if I read the names?"

"Yes, Marj. Go ahead."

He listened carefully. As a name near the end occurred, he had a sudden sense of tension. For the first time his voice was urgent. "Tell me about that policy. Did you write it?"

"No. That was one of Bunnie's. I'll let you speak to her."

He listened to what the other girl had to say and asked two or three questions. Their exchange was brief. He broke the connection and was dialing another number as Tanya returned.

Though her eyes asked questions which for the moment he ignored, she reported immediately, "There's no one on the

mezzanine. There are still a million people down below, but you'd never pick anyone out. Should we page?"

"We can try, though I don't have a lot of hope." On the basis of what he had learned, Mel thought, not much was getting through to the Guerrero woman, so it was unlikely that a p.a. announcement would do so now. Also, by this time she could have left the airport and be halfway to the city. He reproached himself for not having tried to talk with her, as he had intended, but there had been the other things: the delegation from Meadowood; his anxiety about his brother, Keith—Mel remembered that he had considered going back to the control tower . . . well, that would have to wait now . . . then there had been Cindy. With a guilty start because he hadn't noticed before, he realized that Cindy was gone.

He reached for the p.a. microphone on his desk and pushed it toward Tanya.

There was an answer from the number he had dialed, which was airport police headquarters. Mel said crisply, "I want Lieutenant Ordway. Is he still in the terminal?"

"Yes, sir." The police desk sergeant was familiar with Mel's voice.

"Find him as quickly as you can; I'll hold. And by the way, what was the first name of a woman called Guerrero, whom one of your people picked up tonight? I think I know, but I want to make sure."

"Just a minute, sir. I'll look." A moment later he said, "It's Inez; Inez Guerrero. And we've already called the lieutenant on his beeper box."

Mel was aware that Lieutenant Ordway, like many others at the airport, carried a pocket radio receiver which gave a "beep" signal if he was required urgently. Somewhere, at this moment, Ordway was undoubtedly hastening to a phone.

Mel gave brief instructions to Tanya, then pressed the "on" switch of the p.a. microphone, which overrode all others in the terminal. Through the open doors to the anteroom and mezzanine he heard an American Airlines flight departure announcement halt abruptly in mid-sentence. Only twice before, during the eight years of Mel's tenure as airport general manager, had the mike and override switch been used. The first occasion—branded in Mel's memory—had been to announce the death of President Kennedy; the second, a year later, was when a lost and crying child wandered directly

into Mel's office. Usually there were regular procedures for handling lost children, but that time Mel had used the mike himself to locate the frantic parents.

Now he nodded to Tanya to begin her announcement, remembering that he was not yet sure why they wanted the woman, Inez Guerrero, or even that—for certain—there was anything wrong at all. Yet instinct told him that there was; that something serious had happened, or was happening; and when you had a puzzle of that kind, the smart and urgent thing to do was gather all the pieces that you could, hoping that somehow, with help from other people, you could fit them together to make sense.

"Attention please," Tanya was saying in her clear, unaffected voice, now audible in every corner of the terminal. "Will Mrs. Inez Guerrero, or Buerrero, please come immediately to the airport general manager's office on the administrative mezzanine of the main terminal building. Ask any airline or airport representative to direct you. I will repeat . . ."

There was a click in Mel's telephone. Lieutenant Ordway came on the line.

"We want that woman," Mel told him. "The one who was here—Guerrero. We're announcing . . ."

"I know," Ordway said. "I can hear."

"We need her urgently; I'll explain later. For now, take my word . . ."

"I already have. When did you last see her?"

"In my outer office. When she was with you."

"Okay. Anything else?"

"Only that this may be big. I suggest you drop everything; use all your men. And whether you find her or not, get up here soon."

"Right." There was another click as Ordway hung up.

Tanya had finished her announcement; she pushed the "off" button of the microphone. Outside, Mel could hear another announcement begin, "Attention Mr. Lester Mainwaring. Will Mr. Mainwaring and all members of his party report immediately to the main terminal entrance?"

"Lester Mainwaring" was an airport code name for "policeman." Normally, such an announcement meant that the nearest policeman on duty was to go wherever the message designated. "All members of his party" meant every policeman

the terminal. Most airports had similar systems to alert the police without the public being made aware.

Ordway was wasting no time. Undoubtedly he would brief men about Inez Guerrero as they reported to the main entrance.

Call your D.T.M.," Mel instructed Tanya. "Ask him to come to this office as quickly as he can. Tell him it's important." Partly to himself, he added, "We'll start by getting everybody here."

Tanya made the call, then reported, "He's on his way." Her face betrayed nervousness.

Fel had gone to the office door. He closed it.

You still haven't told me," Tanya said, "what it was found out."

Fel chose his words carefully.

Your man Guerrero, the one with no luggage except the attaché case, and whom you think might have a bomb aboard Flight Two, took out a flight insurance policy just before takeoff for three hundred thousand dollars. The beneficiary is Inez Guerrero. He paid for it with what looked like fast small change."

"My God!" Tanya's face went white. She whispered, "Oh, God . . . no!"

6

There were times—tonight was one—when Joe Patroni was proud that he worked in the maintenance bailiwick of the airport, and not in sales.

The thought occurred to him as he surveyed the busy activity of digging beneath, and around the mired Aéreo-can jet which continued to block runway three zero.

Patroni saw it, airline sales forces—in which category he himself was lumped all front office staff and executives—comprised of the same rubber people who connived against each other like school children. On the other hand, Patroni was convinced that those in engineering and maintenance departments behaved like mature adults. Maintenance men (Joe was apt to be one), even when employed by competing airlines, worked

closely and harmoniously, sharing their information, experience, and even secrets for the common good.

As Joe Patroni sometimes confided privately to his friends an example of this unofficial sharing was the pooling of information which came to maintenance men regularly through conferences held by individual airlines.

Patroni's employers, like most major scheduled airlines, had daily telephone conferences—known as “briefings”—during which all regional headquarters, bases, and outfield stations were connected through a continent-wide closed-circuit hook up. Directed by a head office vice-president, the briefings were, in fact, critiques and information exchanges on the way the airline had operated during the past twenty-four hours. Senior people throughout the company's system talked freely and frankly with one another. Operations and sales departments each had their own daily briefing; so did maintenance—the latter, in Patroni's opinion, by far the most important.

During the maintenance sessions, in which Joe Patroni took part five days a week, stations reported one by one. When delays in service—for mechanical reasons—had occurred the previous day, those in charge were required to account for them. Nobody bothered making excuses. As Patroni put it “If you goofed, you say so.” Accidents or failures of equipment, even minor, were reported; the objective, to pool knowledge and prevent recurrence. At next Monday's session Patroni would report tonight's experience with the Aéreo Mexicano 707, and his success or failure, however it turned out. The daily discussions were strictly no-nonsense, largely because the maintenance men were tough cookies who knew they couldn't fool one another.

After each official conference—and usually unknown to senior managements—unofficial ones began. Patroni and others would exchange telephone calls with cronies in maintenance departments of competing airlines. They would compare notes about one another's daily conferences, passing on whatever information seemed worth while. Rarely was any intelligence withheld.

With more urgent matters—especially those affecting safety—word was passed from airline to airline in the same way but without the day's delay. If Delta, for example, had a rotor blade failure on a DC-9 in flight, maintenance departments of Eastern, TWA, Continental, and others using DC-9s

ere told within hours; the information might help prevent similar failures on other aircraft. Later, photographs of the disassembled engine, and a technical report, would follow. They wished, foremen and mechanics from other airlines could widen their knowledge by dropping over for a look-see at the failed part, and any engine damage.

Those who, like Patroni, worked in this give-and-take milieu were fond of pointing out that if sales and administration departments of competing airlines had occasion to consult, their people seldom went to one another's headquarters, but met on neutral ground. Maintenance men, in contrast, visited competitors' premises with the assurance of a common freemasonry. At other times, if one maintenance department was in trouble, others helped as they were able.

This second kind of help had been sent, tonight, to Joe Patroni.

In the hour and a half since work began in the latest attempt to move the stranded jet from alongside runway three zero, Patroni's complement of help had almost doubled. He had begun with the original small crew of Aéreo-Mexican, supplemented by some of his own people from TWA. Now, digging steadily with the others, were ground crews from Pan Am, Pan Am, American, and Eastern.

As the various newcomers had arrived, in an assortment of airline vehicles, it became evident that news of Patroni's problem had spread quickly on the airport grapevine, and, without waiting to be asked, other maintenance departments had pitched in. It gave Joe Patroni a good, appreciative feeling.

Despite the extra help, Patroni's estimate of an hour's reparatory work had already been exceeded. Digging of win trenches, floored by heavy timbers, in front of the airplane's main landing gear had gone ahead steadily—though slowly because of the need for all the men working to seek shelter periodically, to warm themselves. The shelter and the warmth, of a sort, were in two crew buses. As the men entered, they beat their hands and pinched their faces, numb from the biting wind still sweeping icily across the snow-covered airfield. The buses and other vehicles, including trucks, snow clearance equipment, a fuel tanker, assorted service cars, and a roaring power cart—most with beacon lights flashing—were still clustered on the taxiway close by.

The whole scene was bathed by floodlights, creating a white oasis of snow-reflected light in the surrounding darkness.

The twin trenches, each six feet wide, now extended forward and upward from the big jet's main wheels to the firmer ground onto which Patroni hoped the airplane could be moved under its own power. At the deepest level of the trenches was a mess of mud beneath snow, which had originally trapped the momentarily strayed airliner. The mud and slush now mingled, but became less viscous as both trenches angled upward. A third trench, less deep, and narrower than the other two, had been dug to allow passage of the nosewheel. Once the firmer ground was reached, the aircraft would be clear of runway three zero, over which one of its wings now extended. It could also be maneuvered with reasonable ease onto the solid surface of the adjoining taxiway.

Now the preparatory work was almost complete, the success of what came next would depend on the aircraft's pilots, still waiting on the Boeing 707's flight deck, high above the current activity. What they would have to judge was how much power they could safely use to propel the aircraft forward, without upending it on its nose.

Through most of the time since he arrived, Joe Patroni had wielded a shovel with the rest of the men digging. Inactivity came hard to him. Sometimes, too, he welcomed the chance to keep himself fit; even now, more than *“*years since quitting the amateur boxing ring, he was in shape physically than most men years his junior. The ground crewmen enjoyed seeing Patroni's cocky, stock working with them. He led and exhorted . . . *“moving, son, or we'll figure we're gravediggers, and corpse.”* . . . *“The way you guys keep heading for looks like you've got a woman stashed there.”* . . . *“lean on that shovel any more, Jack, you'll free Lot's wife.”* . . . *“Men, we want this airplane and it's obsolete.”*

So far, Joe Patroni had not talked with the first officer, having left that to the Aéreo-Mexi. Ingram, who had been in charge before Patroni. Ingram had passed up a message on the aircraft, telling the pilots what was happening below.

Now, straightening his back, and thrusting Ingram, the maintenance chief advised, “Five

should do it. When you're ready, get the men and trucks clear." He motioned to the snow-shrouded airplane. "When this one comes out, she'll be like a cork from a champagne bottle."

Ingram, huddled into his parka, still pinched and cold as he had been earlier, nodded.

"While you're doing that," Patroni said, "I'll yak with the fly boys."

The old-fashioned boarding ramp which had been trundled from the terminal several hours ago to disembark the stranded passengers was still in place near the aircraft's nose. Joe Patroni climbed the ramp, its steps covered in deep snow, and let himself into the front passenger cabin. He went forward to the flight deck—with relief, lighting his inevitable cigar as he went.

In contrast to the cold and wind-blown snow outside, the pilots' cockpit was snug and quiet. One of the communications radios was tuned to soft music of a commercial station. As Patroni entered, the Aéreo-Mexican first officer, in shirt-sleeves, snapped a switch and the music stopped.

"Don't worry about doing that." The chunky maintenance chief shook himself like a bull terrier while snow cascaded from his clothing. "Nothing wrong with taking things easy. After all, we didn't expect you to come down and shovel."

Only the first officer and captain were in the cockpit. Patroni remembered hearing that the flight engineer had gone with the stewardesses and passengers to the terminal.

The captain, a heavy-set, swarthy man who resembled Anthony Quinn, swiveled around in his port-side seat. He said stiffly, "We have our job to do. You have yours." His English was precise.

"That's right," Patroni acknowledged. "Only trouble is, our job gets fouled up and added to. By other people."

"If you are speaking of what has happened here," the captain said, "*Madre de Dios!*—you do not suppose that I placed this airplane in the mud on purpose."

"No, I don't." Patroni discarded his cigar, which was maimed from chewing, put a new one in his mouth, and lit it. "But now it's there, I want to make sure we get it out—this next time we try. If we don't, the airplane'll be in a whole lot deeper; so will all of us, including you." He nodded toward the captain's seat. "How'd you like me to sit there and drive it out?"

The captain flushed. Few people in any airline talked as casually to four-strippers as Joe Patroni.

"No, thank you," the captain said coldly. He might have replied even more unpleasantly, except that at the moment he was suffering acute embarrassment for having got into his present predicament at all. Tomorrow in Mexico City, he suspected, he would face an unhappy, searing session with his airline's chief pilot. He raged inwardly: *Jesucristo y por la amor de Dios!*

"There's a lotta half-frozen guys outside who've been busting their guts," Patroni insisted. "Getting out now's tricky. I've done it before. Maybe you should let me again."

The Aéreo-Mexican captain bridled. "I know who you are, Mr. Patroni, and I am told that you are likely to help us move from this bad ground, where others have failed. So I have no doubt that you are licensed to taxi airplanes. But let me remind you there are two of us here who are licensed to fly them. It is what we are paid for. Therefore we shall remain at the controls."

"Suit yourself." Joe Patroni shrugged, then waved his cigar at the control pedestal. "Only thing is, when I give the word, open those throttles all the way. And I mean all the way, and don't chicken out."

As he left the cockpit, he ignored angry glares from both pilots.

Outside, digging had stopped; some of the men who had been working were warming themselves again in the crew buses. The buses and other vehicles—with the exception of the power cart, which was needed for starting engines—were being removed some distance from the airplane.

Joe Patroni closed the forward cabin door behind him and descended the ramp. The foreman, huddled deeper than ever into his parka, reported, "Everything's set."

Remembering his cigar was still lighted, Patroni puffed at it several times, then dropped it into the snow where it went out. He motioned to the silent jet engines. "Okay, let's light up all four."

Several men were returning from the crew bus. A quartet put their shoulders to the ramp beside the aircraft and shoved it clear. Two others responded to the foreman's shout against the wind, "Ready to start engines!"

One of the second pair stationed himself at the front of the

aircraft, near the power cart. He wore a telephone headset plugged into the fuselage. The second man, with flashlight signal wands, walked forward to where he could be seen by the pilots above.

Joe Patroni, with borrowed protective head pads, joined the crewman with the telephone headset. The remainder of the men were now scrambling from the sheltering buses, intent on watching what came next.

In the cockpit, the pilots completed their checklist.

On the ground below, the crewman with the telephone set began the jet starting ritual. "Clear to start engines."

A pause. The captain's voice. "Ready to start, and pressurize the manifold."

From the power cart blower, a stream of forced air hit the air turbine starter of number three engine. Compressor vanes turned, spun faster, whined. At fifteen percent speed, the first officer fed in aviation kerosene. As the fuel ignited, a smoke cloud belched back and the engine took hold with a deep-throated bellow.

"Clear to start four."

Number four engine followed three. Generators on both engines charging.

The captain's voice. "Switching to generators. Disconnect ground power."

Above the power cart, electric lines came down. "Disconnected. Clear to start two."

Number two took hold. Three engines now. An encompassing roar. Snow streaming behind.

Number one fired and held.

"Disconnect air."

"Disconnected."

The umbilical air hose slipped down. The foreman drove the power cart away.

Floodlights ahead of the aircraft had been moved to one side.

Patroni exchanged headsets with the crewman near the front of the fuselage. The maintenance chief now had the telephone set, and communication with the pilots.

"This's Patroni. When you're ready up there, let's roll her out."

Ahead of the aircraft nose, the crewman with the lighted wands held them up, ready to be a guide along an elliptical

path beyond the trenches, also cleared at Joe Patroni's direction. The crewman was ready to run if the 707 came out of the mud faster than expected.

Patroni crouched close to the nosewheel. If the airplane moved quickly, he, too, was vulnerable. He held a hand near the interphone plug, ready to disconnect. He watched the main landing gear intently for a sign of forward movement.

The captain's voice. "I am opening up."

The tempo of the jets increased. In a roar like sustained thunder, the airplane shook, the ground beneath it trembled. But the wheels remained still.

Patroni cupped his hands around the interphone mouthpiece. "More power! Throttles forward all the way!"

The engine noise heightened but only slightly. The wheels rose perceptibly, but still failed to move forward.

"Goddamit! All the way!"

For several seconds, the engine tempo remained as it was, then abruptly lessened. The captain's voice rattled the interphone; it had a sarcastic note. "*Patroni, por favor*, if I open my throttles all the way, this airplane will stand on its nose. Instead of a stranded 707, we shall both have a wrecked one."

The maintenance chief had been studying the landing gear wheels, which had now settled back, and the ground around them. "It'll come out, I tell you! All it needs is the guts to pull full power."

"Look to your own guts!" the captain snapped back. "I am shutting the engines down."

Patroni shouted into the interphone. "Keep those motors running; hold 'em at idle! I'm coming up!" Moving forward under the nose, he motioned urgently for the boarding ramp to be repositioned. But even as it was being pushed into place, all four engines quieted and died.

When he reached the cockpit, both pilots were unfastening their seat harnesses.

Patroni said accusingly, "You chickened out!"

The captain's reaction was surprisingly mild. "*Es posible*. Perhaps it is the only intelligent thing I have done tonight." He inquired formally, "Does your maintenance department accept this airplane?"

"Okay." Patroni nodded. "We'll take it over."

The first officer glanced at his watch and made an entry in a log.

"When you have extricated this airplane, in whatever way,"

the Aéreo-Mexican captain stated, "no doubt your company will be in touch with my company. Meanwhile, *buenas noches*."

As the two pilots left, their heavy topcoats buttoned tightly at the neck, Joe Patroni made a swift, routine check of instruments and control settings. A minute or so later he followed the pilots down the outside ramp.

The Aéreo-Mexican foreman, Ingram, was waiting below. He nodded in the direction of the departing pilots, now hurrying toward one of the crew buses. "That was the same thing they done to me; not pulling enough power." He motioned gloomily toward the aircraft's main landing gear. "That's why she went in deep before; now she's dug herself in deeper still."

It was what Joe Patroni had feared.

With Ingram holding an electric lantern, he ducked under the fuselage to inspect the landing gear wheels; they were stuck in mud and slush again, almost a foot deeper than before. Patroni took the light and shone it under the wings; all four engine nacelles were disquietingly closer to the ground.

"Nothing but a sky hook'll help her now," Ingram said.

The maintenance chief considered the situation, then shook his head. "We got one more chance. We'll dig some more, driving the trenches down to where the wheels are now, then start the engines again. Only this time I'll drive."

The wind and snow still howled around them.

Shivering, Ingram acknowledged doubtfully, "I guess you're the doctor. But better you than me."

Joe Patroni grinned. "If I don't blast her out, maybe I'll blow her apart."

Ingram headed for the remaining crew bus to call out the men; the other bus had taken the Aéreo-Mexican pilots to the terminal.

Patroni calculated: there was another hour's work ahead before they could try moving the aircraft again. Therefore runway three zero would have to continue out of use for at least that long.

He went to his radio traffic control.

7

The theory that an overburdened, exhausted mind can exercise its own safety valve by retreating into passive semiawareness was unknown to Inez Guerrero. Nevertheless, for her the theory had proved true. At this moment she was a mental walking-wounded case.

The events of tonight affecting her personally, coupled with her accumulated distress and weariness of weeks, had proved a final crushing defeat. It prompted her mind—like an overloaded circuit—to switch off. The condition was temporary, not permanent, yet while it remained Inez Guerrero had forgotten where she was, or why.

The mean, uncouth taxi driver who had brought her to the airport had not helped. When bargaining downtown, he agreed to seven dollars as the price of the ride. Getting out, Inez proffered a ten dollar bill—almost the last money she had—expecting change. Mumbling that he had no change but would get some, the cabbie drove off. Inez waited for ten anxious minutes, watching the terminal clock which was nearing 11 P.M.—the time of Flight Two's departure—before it dawned on her that the man had no intention of returning. She had noticed neither the taxi number nor the driver's name—something the driver had gambled on. Even if she had, Inez Guerrero was not the kind who complained to authority; the driver had correctly guessed that, too.

Despite the initial slowness of her journey from downtown, she could have reached Flight Two before it left—but for the time spent waiting for the non-appearing change. As it was, she arrived at the departure gate to see the airplane taxiing away.

Even then, to find out if her husband, D.O., was really aboard, Inez had the presence of mind to use the subterfuge which the Trans America inquiries girl, Miss Young, suggested on the telephone. A uniformed agent was just leaving gate forty-seven, where Flight Two had been. Inez accosted him.

As Miss Young advised, Inez avoided asking a direct question, and made the statement, "My husband is on that flight which just left." She explained that she had missed seeing her

husband, but wanted to be sure he was safely aboard. Inez unfolded the yellow time-payment contract which she discovered at home among D.O.'s shirts, and showed it to the Trans America agent. He barely glanced at it, then checked the papers he was holding.

For a moment or two Inez wondered hopefully if she had made a mistake in presuming that D. O. was leaving on flight; the idea of his going to Rome at all still seemed fantastic. Then the agent said, yes, there was a D. O. Guerrero aboard Flight Two, and he, the agent, was sorry that Mr. Guerrero had missed seeing her husband, but everything was in a mixup tonight because of the storm, and now if you would please excuse him . . .

It was when the agent had gone and Inez realized that despite the press of people around her in the terminal, she was utterly alone, that she began to cry.

At first the tears came slowly; then, as she remembered what had gone wrong, they streamed in great heaving sobs which shook her body. She cried for the past and for the present; for the home she had had and lost; for her child whom she could no longer keep with her; for D.O. who, despite his faults as a husband, and the failure to support his family, was at least familiar, but now had deserted her. She wept for what she herself had been and had become; for the fact that she had no money, nowhere to go but to the mean, cockroach-infested rooms downtown, from which she would be evicted tomorrow, having nothing left—after the taxi man and driver's theft—from the pathetically small amount of money which she had hoped to stave off the landlord . . . she was not even sure if she had enough small change to return to downtown. She cried because her shoes still hurt her feet; for her clothes which were shabby and sodden; for her weakness, and because she had a cold and a fever which she could feel getting worse. She cried for herself and all others whom every hope was gone.

It was then, to avoid stares of people who were watching that she began walking aimlessly through the terminal, weeping as she went. Somewhere near that time, too, the defensive machinery of her mind took over, inducing a protective numbness, so that her sorrow persisted but its reasons for a while, were mercifully blurred.

Soon after, an airport policeman found her and, with a sensitivity for which police are not always credited—

her in as obscure a corner as he could find while telephoning his superiors for instructions. Lieutenant Ordway happened to be nearby and dealt with the matter personally. It was he who decided that Inez Guerrero, though incoherent and upset, was harmless, and had ordered her taken to the airport general manager's office—the only place Ned Ordway could think of which was quiet, yet less intimidating than police headquarters.

Inez had gone docilely, in an elevator and along a mezzanine, only half-knowing that she was being taken anywhere at all, and not caring; and after, had sat quietly in a seat she was guided to, her body, if not her mind, grateful for the rest. She had been aware of people coming and going, and some had spoken, but she had brought neither the sight nor sound of them into focus, the effort seeming too much.

But after a while, her resilience—which is another word for strength of the human spirit, which all possess, however burdened or humble—brought her back to a realization, even though vague, that she must move on, because life moved on, and always had and would, no matter how many defeats it wrought, or dreary or empty as it might seem.

So Inez Guerrero stood up, still not sure where she was or how she had come there, but prepared to go.

It was then that the Meadowood delegation, escorted by Lieutenant Ordway, entered the anteroom to Mel Bakersfeld's office, where Inez was. The delegation continued into the other room, then Ned Ordway had returned to speak with Inez Guerrero, and Mel observed the two of them together briefly before the door to his office closed.

Inez, through her miasma of uncertainty, was also conscious of the big Negro policeman, whom she had a feeling she had seen somewhere before, quite recently, and he had been kind then, as he was being kind now, leading her with quiet, not-quite-questions, so that he seemed to understand, without her ever saying so, that she had to return downtown and wasn't sure she had enough money for it. She started to fumble with her purse, intending to count what was there, but he stopped her. Then, with his back to the other room, he slipped three one-dollar bills into her hand, and came with her outside, pointing the way down to where, he said, she would find a bus, and added that what he had given her would be enough for the fare, with something over for wherever she had to go when she got to the city.

The policeman had gone then, returning in the direction from which he had come, and Inez did what she was told, going down some stairs; then almost at the big door through which she was to go for the bus, she had seen a familiar sight—a hot dog counter; and at that moment she realized how hungry and thirsty she was, on top of everything else. She had groped in her purse, and found thirty-five cents, and bought a hot dog, and coffee in a paper cup, and somehow the sight of those two very ordinary things was reassuring. Not far from the food counter, she found a seat and tucked herself into a corner. She wasn't sure how long ago that was but now, with the coffee gone and the hot dog eaten, awareness which earlier had started to come back, was receding from her once more in a comfortable way. There was something comforting, too, about the crowds around her, the noises, and loudspeaker announcements. Twice Inez thought she heard her own name on the loudspeakers, but knew it was imagination and couldn't be true because no one would call her, or even know that she was here.

She realized dimly that sometime soon she would have to move on, and knew that tonight especially it would entail an effort. But for a while, she thought, she would sit here quietly, where she was.

your decision—is whether or not we have enough to warn your captain of Flight Two.” Mel was reminded again of what he had temporarily pushed from mind: that the flight was commanded by his brother-in-law, Vernon Demerest. Later, Mel knew, he might have to do some reconsidering about certain implications. But not yet.

“I’m thinking now.” The D.T.M. looked grim; he swung to Tanya. “Whatever we decide, I want Operations in on this. Find out if Royce Kettering is still on the base. If so, get him here fast.” Captain Kettering was Trans America’s chief pilot at Lincoln International; it was he who earlier tonight had test-flown aircraft N-731-TA, before—as Flight Two, *The Golden Argosy*—it took off for Rome.

“Yes, sir,” Tanya said.

While she was on one telephone, another rang. Mel answered.

It was the tower watch chief. “I have the report you wanted on Trans America Two.” One of Mel’s calls for a few minutes ago had been to air traffic control, requesting information on the flight’s takeoff time and progress.

“Go ahead.”

“Takeoff was 11:13 local time.” Mel’s eyes swung to a wall clock. It was now almost ten minutes after midnight; the flight had been airborne nearly an hour.

The tower chief continued, “Chicago Center handed off the flight to Cleveland Center at 12:27 EST, Cleveland handed it to Toronto at 01:03 EST; that’s seven minutes ago. At the moment, Toronto Center reports the aircraft’s position as near London, Ontario. I have more information—course, height, speed—if you want it.”

“That’s enough for now,” Mel said. “Thanks.”

“One other thing, Mr. Bakersfeld.” The tower chief summarized Joe Patroni’s latest bulletin about runway three zero; the runway would be out of use for at least another hour. Mel listened impatiently; at the moment, other things seemed more important.

When he hung up, Mel repeated the information about Flight Two’s position to the D.T.M.

Tanya came off the other phone. She reported, “Operations found Captain Kettering. He’s coming.”

“That woman—the passenger’s wife,” the D.T.M. said.
“What was her name?”

Ned Ordway answered. "Inez Guerrero."

"Where is she?"

"We don't know." The policeman explained that his men were searching the airport, although the woman might be gone. He added that city police headquarters had been alerted, and all buses from the airport to downtown were now being checked on arrival.

"When she was here," Mel explained, "we had no idea . . ."

The D.T.M. grunted. "We were all slow." He glanced at Tanya, then at Customs Inspector Standish, who so far had not spoken. The D.T.M., Tanya knew, was remembering ruefully his own instructions to "Forget it!"

Now he informed her, "We'll have to tell the captain of the flight something. He's entitled to know as much as we do, even though so far we're only guessing."

Tanya asked, "Shouldn't we send a description of Guerrero? Captain Demerest may want to have him identified without his knowing."

"If you do," Mel pointed out, "we can help. There are people here who've seen the man."

"All right," the D.T.M. acknowledged, "we'll work on that. Meanwhile, Tanya, call our dispatcher. Tell him there's an important message coming in a few minutes, and to get a Selcal circuit hooked into Flight Two. I want this kept private, not broadcast for everybody. At least, not yet."

Tanya returned to the telephone.

Mel asked Bunnie, "Are you Miss Vorobioff?"

As she nodded nervously, the eyes of the others turned to her. Automatically, those of the men dropped to Bunnie's capacious breasts; the D.T.M. seemed about to whistle, but changed his mind.

Mel said, "You realize which man we're talking about?"

"I . . . I'm not sure."

"It's a man named D. O. Guerrero. You sold him an insurance policy tonight, didn't you?"

Bunnie nodded again. "Yes."

"When you wrote the policy, did you get a good look at him?"

She shook her head. "Not really." Her voice was low. She moistened her lips.

Mel seemed surprised. "I thought on the phone . . ."

"There were many other people," Bunnie said defensively.

"But you told me you remembered this one."

"It was someone else."

"And you don't recall the man Guerrero?"

"No."

Mel looked baffled.

"Let me, Mr. Bakersfeld." Ned Ordway took a pace forward; he put his face near the girl's. "You're afraid of getting involved, aren't you?" Ordway's voice was a harsh, policeman's voice, not at all the gentle tone he used earlier tonight with Inez Guerrero.

Bunnie flinched, but didn't answer.

Ordway persisted, "Well, aren't you? Answer me."

"I don't know."

"Yes, you do! You're afraid to help anyone for fear of what it might do to you. I know your kind." Ordway spat out the words contemptuously. This was a savage, tough side of the lieutenant's nature which Mel had never seen before. "Now you hear me, baby. If it's trouble you're scared of, you're buying it right now. The way to get out of trouble—if you can—is to answer questions. *And answer fast!* We're running out of time."

Bunnie trembled. She had learned to fear police interrogation in the grim school of Eastern Europe. It was a conditioning never totally erased. Ordway had recognized the signs.

"Miss Vorobioff," Mel said. "There are almost two hundred people aboard the airplane we're concerned with. They may be in great danger. Now, I'll ask you again. Did you get a good look at the man Guerrero?"

Slowly, Bunnie nodded. "Yes."

"Describe him, please."

She did so, haltingly at first, then with more confidence.

While the others listened, a picture of D. O. Guerrero emerged: gaunt and spindly; a pale, sallow face with protruding jaw; long scrawny neck; thin lips; a small sandy mustache; nervous hands with restless fingers. When she got down to it, Bunnie Vorobioff proved herself a keen observer.

The D.T.M., now seated at Mel's desk, wrote the description, incorporating it with a message for Flight Two which he was drafting.

When Bunnie came to the part about D. O. Guerrero barely having enough money—and no Italian money; the man's nervous tension, the fumbling with dimes and pennies; his excitement on discovering a five-dollar bill in an inside pocket, the D.T.M. looked up with a mixture of disgust and

AIRPORT

or. "My God! And you still issued a policy. Are you
ple mad?"

"I thought . . ." Bunnie started to say.
"You thought! But you didn't do anything, did you?"
Her face drained and white, Bunnie Vorobioff shook her
head.

Mel reminded the D.T.M., "Bert, we're wasting time."
"I know, I know! Just the same . . ." The D.T.M. clenched
the pencil he had been using. He muttered, "It isn't just he
or even the people who employ her. It's us—the airline
we're as much to blame. We agree with the pilots about
port flight insurance, but haven't the guts to say so. We
them do our dirty work . . ."

Mel said tersely to Customs Inspector Standish, "Harry, is
there anything you'd add to the description of Guerrero?"
"No," Standish said. "I wasn't as near to him as this young
lady, and she saw some things I didn't. But I did watch the
way he held the case, as you know, and I'd say this: If what
you think is in there really is, don't anyone try to grab that
case away from him."

"So what do you suggest?"
The Customs man shook his head. "I'm no expert, so
can't tell you; except, I guess you'd have to get it by some
kind of trickery. But if it's a bomb, it has to be self-contained
in the case, and that means somewhere there's a trigger,
the chances are it'll be the kind of trigger he can get
quickly. He's possessive about the case now. If someone
to take it away, he'd figure he was found out and had no
to lose." Standish added grimly, "A trigger finger c-

wrong, how in God's name would he break the

register in Denver? He remembered his last sight of

girl, playing with the baby from th-

Goodbye, Uncle Harry! No

are definite, ha

Well, Standish thought, though it might be late, at least he would be definite now.

"I'd like to say something else." The eyes of the others swung to him.

"I have to tell you this because we haven't time to waste in modesty: I'm a good judge of people, mostly on first sight, and usually I can smell the bad ones. It's an instinct, and don't ask me how it works because I couldn't tell you, except that in my job some of us get to be that way. I spotted that man tonight, and I said he was 'suspicious'; I used that word because I was thinking of smuggling, which is the way I'm trained. Now, knowing what we do—even little as it is—I'd make it stronger. The man Guerrero is dangerous." Standish eyed the Trans America D.T.M. "Mr. Weatherby—get that word 'dangerous' across to your people in the air."

"I intend to, Inspector." The D.T.M. looked up from his writing. Most of what Standish had been saying was already included in the message for Flight Two.

Tanya, still on the telephone, was talking with Trans America's New York dispatcher by tie line. "Yes, it will be a long message. Will you put someone on to copy, please?"

A sharp knock sounded on the office door and a tall man with a seamed, weatherworn face and sharp blue eyes came in from the anteroom. He carried a heavy topcoat and wore a blue serge suit which might have been a uniform, but wasn't. The newcomer nodded to Mel, but before either could speak, the D.T.M. cut in.

"Royce, thanks for coming quickly. We seem to have some trouble." He held out the notepad on which he had been writing.

Captain Kettering, the base chief pilot for Trans America, read the draft message carefully, his only reaction a tightening at the mouth as his eyes moved down the page. Like many others, including the D.T.M., it was unusual for the chief pilot to be at the airport this late at night. But exigencies of the three-day storm, with the need for frequent operating decisions, had kept him here.

The second telephone rang, cutting through the temporary silence. Mel answered it, then motioned to Ned Ordway who took the receiver.

Captain Kettering finished reading. The D.T.M. asked, "Do you agree to sending that? We've dispatch standing by with a telcal hook-up."

Kettering nodded. "Yes, but I'd like you to add: 'Suggest return or alternate landing at captain's discretion,' and have the dispatcher give them the latest weather."

"Of course." The D.T.M. penciled in the extra words, then passed the pad to Tanya. She began dictating the message.

Captain Kettering glanced at the others in the room. "Is that everything we know?"

"Yes," Mel said. "It is, so far."

"We may know more soon," Lieutenant Ordway said. He had returned from the telephone. "We just found Guerrero's wife."

The message from D.T.M. Lincoln International was addressed, CAPTAIN, TRANS AMERICA FLIGHT TWO, and began:

UNCONFIRMED POSSIBILITY EXISTS THAT MALE TOURIST PASSENGER D. O. GUERRERO ABOARD YOUR FLIGHT MAY HAVE EXPLOSIVE DEVICE IN HIS POSSESSION. PASSENGER WITH NO LUGGAGE AND APPARENTLY WITHOUT FUNDS INSURED SELF HEAVILY BEFORE DEPARTURE. WAS OBSERVED BEHAVING SUSPICIOUSLY WITH ATTACHE TYPE BRIEFCASE CARRIED AS HAND BAGGAGE. DESCRIPTION FOLLOWS . . .

As the D.T.M. had foreseen, it took several minutes for a connection to be established, through company radio, with Flight Two. Since the earlier Selcal message to the flight concerning its stowaway Mrs. Ada Quonsett, the aircraft had moved out of Trans America's Cleveland dispatch area into that of New York. Now, company messages must be passed through a New York dispatcher for relaying to the flight.

The message, as Tanya dictated it, was being typed by a clerk in New York. Alongside the clerk a Trans America dispatcher read the first few lines, then reached for a direct line to an operator at ARINC—a private communication network maintained cooperatively by all major airlines.

The ARINC operator—at another location in New York—tapped up a second circuit between himself and Trans America's dispatcher, then punched into a transmitter keyboard a four-letter code, AGFG, specifically assigned to aircraft N-731. Once more, like a telephone call to a single number on a city line, an alerting signal would be received aboard Flight

A few moments later the voice of Captain Vernon Demerest, responding from high above Ontario, Canada, was audible in New York. "This is Trans America Two answering Sel-ll."

"Trans America Two, this is New York dispatch. We have an important message. Advise when ready to copy."

A brief pause, then Demerest again. "Okay, New York. Go ahead."

"CAPTAIN, FLIGHT TWO," the dispatcher began. "UNCONFIRMED POSSIBILITY EXISTS . . ."

Inez had still been sitting quietly, in her corner near the food counter, when she felt her shoulder shaken.

"Inez Guerrero! Are you Mrs. Guerrero?"

She looked up. It took several seconds to collect her thoughts, which had been vague and drifting, but she realized that it was a policeman who was standing over her.

He shook her again and repeated the question.

Inez managed to nod. She became aware that this was a different policeman from the earlier one. This one was white, and neither as gentle nor as softly spoken as the other.

"Let's move it, lady!" The policeman tightened his grip on her shoulder in a way which hurt, and pulled her abruptly to her feet. "You hear me?—let's go! They're screamin' for you upstairs, and every cop in the joint's bin searchin' for you."

Ten minutes later, in Mel's office, Inez was the pivot of attention. She occupied a chair in the room's center to which she had been guided on arrival. Lieutenant Ordway faced her. The policeman who had escorted Inez in was gone.

The others who had been present earlier—Mel, Tanya, Customs Inspector Standish, Bunnie Vorobioff, the Trans America D.T.M., Weatherby, and the chief pilot, Captain Lettering, were ranged about the room. All had remained at Mel's request.

"Mrs. Guerrero," Ned Ordway said. "Why is your husband going to Rome?"

Inez stared back bleakly and didn't answer. The policeman's voice sharpened, though not unkindly. "Mrs. Guerrero, please listen to me carefully. There are some important questions which I have to ask. They concern your husband, and need your help. Do you understand?"

"I . . . I'm not sure."

"You don't have to be sure about *why* I'm asking the ques-

Kettering nodded. "Yes, but I'd like you to add: 'Suggest return or alternate landing at captain's discretion,' and have the dispatcher give them the latest weather."

"Of course." The D.T.M. penciled in the extra words, then passed the pad to Tanya. She began dictating the message.

The others who had been present earlier—Mel, Tanya, Customs Inspector Standish, Bunnie Vorobioff, the Trans America D.T.M., Weatherby, and the chief pilot, Captain Huttering, were ranged about the room. All had remained at Inez's request.

"Mrs. Guerrero," Ned Ordway said. "Why is your husband going to Rome?"

Inez stared back bleakly and didn't answer. The policeman's voice sharpened, though not unkindly. "Mrs. Guerrero, please listen to me carefully. There are some important questions which I have to ask. They concern your husband, and need your help. Do you understand?"

"I . . . I'm not sure."

"You don't have to be sure about *why* I'm asking the ques-

She looked up. Her eyes met his. "All right."

"Is your husband in financial trouble now?"

She hesitated only briefly. "Yes."

"Bad trouble?"

Inez nodded slowly.

"Is he broke? In debt?"

Again a whisper. "Yes."

"Then where did he get money for his fare to Rome?"

"I think . . ." Inez started to say something about her ring which D.O. had pawned, then remembered the Trans American Airlines time payment contract. She took the now-creased travel sheet from her purse and gave it to Ordway who glanced over it. The D.T.M. joined him.

"It's made out to 'Buerrero,'" the D.T.M. said. "Though the signature could be anything."

Tanya pointed out, "Buerrero is the name we had at first on the flight manifest."

Ned Ordway shook his head. "It isn't important now, but it's an old trick if anyone has a lousy credit rating. They use the wrong first letter so the bad rating won't show up in inquiry at least, not in a hurry. Later, if the mistake's discovered, it can be blamed on whoever filled out the form."

Ordway swung sternly back to Inez. He had the yellowed sheet in hand. "Why did you agree to this when you knew your husband was defrauding?"

She protested, "I didn't know."

"Then how is it you have this paper now?"

Haltingly, she related how she had found it earlier this evening, and had come to the airport, hoping to intercept her husband before departure.

"So until tonight you had no idea that he was going?"

"No, sir."

"Anywhere at all?"

Inez shook her head.

"Even now, can you think of any reason for him going?"

She looked bewildered. "No."

"Does your husband ever do irrational things?"

Inez hesitated.

"Well," Ordway said, "does he?"

"Sometimes, lately . . ."

"He *has* been irrational?"

A whisper. "Yes."

"Violent?"

Reluctantly, Inez nodded.
 "Your husband was carrying a case tonight," Ordway said quietly. "A small attaché case, and he seemed specially cautious about it. Have you any idea what might be inside?"

"No, sir."

"Inez, you said your husband was a contractor—a building contractor. In the course of his work did he ever use explosives?"

The question had been put so casually and without preamble, that those listening seemed scarcely aware it had been asked. But as its import dawned, there was a sudden tenseness in the room.

"Oh, yes," Inez said. "Often."

Ordway paused perceptibly before asking, "Does your husband know a lot about explosives?"

"I think so. He always liked using them. But . . ." Abruptly she stopped.

"But what, Inez?"

Suddenly there was a nervousness to Inez Guerrero's speech which had not been there before. "But . . . he has them very carefully." Her eyes moved around the room.

"Please . . . what is this about?"

Ordway said softly, "You have an idea, Inez; haven't you?"

When she didn't answer, almost with indifference he asked, "Where are you living?"

She gave the address of the South Side apartment house; earlier this evening?

Thoroughly frightened now, she nodded.

Ordway turned to Tanya. Without raising his voice, he asked, "Get a line open, please, to police headquarters; this extension"—he scribbled a number on a card to hold.

Tanya went quickly to Mel's desk.

Ordway asked Inez, "Did your husband have a place in the apartment?" As she hesitated, he said suddenly, "You've told the truth so far. Now! Did he?"

"Yes."

"What kind of explosives?"

"Some dynamite . . . and caps . . . They were used for his contracting work?"

"Did he ever say anything about them? Give a reason for keeping them?"

Inez shook her head. "Only, that . . . if you knew how to handle them . . . they were safe."

"Where were the explosives kept?"

"Just in a drawer."

"In a drawer where?"

"The bedroom." An expression of sudden shock crossed Inez Guerrero's face. Ordway spotted it.

"You thought of something then! What was it?"

"Nothing!" Panic was in her eyes and voice.

"Yes, you did!" Ned Ordway leaned forward, close to Inez, his face aggressive. For the second time in this room tonight he exhibited nothing of kindness; only the rough, tough savagery of a policeman who needed an answer and would get it. He shouted, "Don't try holding back or lying! It won't work. Tell me what it was you thought." As Inez whimpered: "Never mind that! Tell me!"

"Tonight . . . I didn't think of it before . . . the things . . ."

"The dynamite and caps?"

"Yes."

"You're wasting time! What about them?"

Inez whispered, "They were gone!"

Tanya said quietly, "I have your call, Lieutenant. They're holding."

No one among the others spoke.

Ordway nodded, his eyes still fixed on Inez. "Did you know that tonight, before your husband's flight took off, he insured himself heavily—very heavily indeed—naming you as beneficiary?"

"No, sir. I swear I don't know anything . . ."

"I believe you," Ordway said. He stopped, considering, and when he spoke again his voice grated harshly.

"Inez Guerrero, listen to me carefully. We believe your husband has those explosives, which you've told us about, with him tonight. We think he carried them onto that Rome flight, and, since there can be no other explanation for having them there, that he intends to destroy the airplane, killing himself and everyone else aboard. Now, I've one more question, and before you answer, think carefully, and remember those other people—innocent people, including children—who are on that flight, too. Inez, you know your husband; you know him as well as anyone alive. Could he . . . for the

ver, would be given without query, and as speedily as possible.

Even now, on the ground, procedural wheels were turning. At Toronto Air Route Center, located in a handsome modern building some fourteen miles beyond the city limits, the controller receiving Flight Two's transmission had summoned a supervisor. The supervisor was liaising with other sectors, clearing a path ahead of Flight Two, as well as altitudes immediately below—the last as a precaution. Cleveland Center, which earlier had passed the flight to Toronto Center and now would receive it back, had been alerted also. Chicago Center, which would take over from Cleveland, was being notified.

On the flight deck of Flight Two, a new air route control message was coming in. "Begin descent to flight level two eight zero. Report leaving flight level three three zero."

Anson Harris acknowledged. "Toronto Center, this is Trans America Two. We are beginning descent now."

On Harris's orders, Second Officer Jordan was reporting to Trans America dispatch, by company radio, the decision to return.

The door from the forward cabin opened. Gwen Meighen came in.

"Listen," she said, "if it's more hors d'oeuvres, I'm sorry, but you can't have them. In case you hadn't noticed, we happen to have a few passengers aboard."

"I'll deal with the insubordination later," Demerest said. "Right now"—he mimicked Gwen's English accent—"we've got a spot o' bother."

Superficially, little had changed on the flight deck since a few moments ago when the message from D.T.M. Lincoln had come in. Yet, subtly, the relaxed mood prevailing earlier had vanished. Despite their studied composure, the three-man crew was all-professional and sharp, their minds at peak acuity, each sensing the adjustment in the other two. It was to achieve such moments, responsively and quickly, that years of training and experience marked the long route to airline captaincy. Flying itself—controlling an airplane—was not a difficult achievement; what commercial pilots were paid high salaries for was their reserve of resourcefulness, airmanship, and general aviation wisdom. Demerest, Harris, and—to a lesser extent—Cy Jordan, were summoning their reserves now. The situation aboard Flight Two was not yet critical;

est was remembering the portion of the D.T.M.'s message. IF SUPPOSITION TRUE, LIKELY THAT TRIGGER FOR EXPLOSIVE WILL BE ON OUTSIDE OF CASE AND EASILY REACHABLE. THEREFORE USE EXTREME CAUTION IN ATTEMPTING TO SEIZE CASE FORCIBLY. He guessed that Gwen, too, was thinking of the warning.

For the first time a feeling, not of fear but doubt, intruded on his reasoning. Fear might come later, but not yet. Was there a possibility that this bomb scare might prove to be more than a scare? Vernon Demerest had thought and talked of this kind of situation often enough, yet could never really believe it would happen to himself.

Anson Harris was easing out of the turn as gently as he had gone into it. They were now headed around completely.

The Selcal chime sounded again. Demerest motioned to Cy Jordan, who switched radios and answered, then began copying down a message.

Anson Harris was talking once more with Toronto Air Route Center.

"I wonder," Vernon Demerest said to Gwen, "if there's any chance of getting those other two passengers alongside Guerrero out of their seats. That way he'd be left there, in the three-seat section, on his own. Then maybe one of them could come from behind, lean over and grab."

"He'd suspect," Gwen said emphatically. "I'm sure he would. He's edgy now. The moment we got those other passengers out, whatever excuse we used, he'd know something was wrong and he'd be watching and waiting."

The second officer passed over the Selcal message he had been copying. It was from D.T.M. Lincoln. Using the hood light, Gwen and Demerest read it together.

NEW INFORMATION INDICATES EARLIER POSSIBILITY OF EXPLOSIVE DEVICE IN POSSESSION OF PASSENGER GUERRERO IS NOW STRONG PROBABILITY REPEAT STRONG PROBABILITY. PASSENGER BELIEVED MENTALLY DISTURBED, DESPERATE. REPEAT PREVIOUS WARNING TO APPROACH WITH EXTREME CAUTION. GOOD LUCK.

"I like that last bit," Cy Jordan said. "That's real nipping at us that."

Demerest said brusquely, "Shut up!"

For several seconds—apart from routine flight deck sounds—there was silence.

"If there were some way," Demerest said slowly, ". . . some way we could trick him into letting go of that case. All we'd need would be a few seconds to have our hands on it, then get it clear away . . . if we were quick, two seconds would be enough."

Gwen pointed out, "He wouldn't even put it down . . ."

"I know! I know! I'm thinking, that's all." He stopped. "Let's go over it again. There are two passengers between Guerrero and the aisle. One of them . . ."

"One of them is a man; he has the aisle seat. In the middle is the old lady, Mrs. Quonsett. Then Guerrero."

"So grandma's right beside Guerrero; right alongside the case."

"Yes, but how does it help? Even if we could let her know, she couldn't possibly . . ."

Demerest said sharply, "You haven't said anything to her yet? She doesn't know we're on to her?"

"No. You told me not to."

"Just wanted to be sure."

Again they were silent. Vernon Demerest concentrated, thinking, weighing possibilities. At length he said carefully, "I have an idea. It may not work, but at the moment it's the best we have. Now listen, while I tell you exactly what to do."

In the tourist section of Flight Two most passengers had finished dinner, and stewardesses were briskly removing trays. The meal service had gone faster than usual tonight. One reason was that due to the delayed takeoff, some passengers had eaten in the terminal and now, because of the lateness of the hour, they had either declined dinner or merely nibbled at it.

At the three-seat unit where Mrs. Ada Quonsett was still chatting with her new friend, the oboe player, one of the tourist cabin stewardesses—a pert young blonde—asked, "Have you finished with your trays?"

"Yes, I have, miss," the oboist said.

Mrs. Quonsett smiled warmly. "Thank you, my dear; you may take mine. It was very nice."

The dour man on Mrs. Quonsett's left surrendered his tray without comment.

It was only then that the little old lady from San Diego became aware of the other stewardess standing in the aisle.

She was one whom Mrs. Quonsett had observed several times previously, and appeared to be in charge of the other girls. She had deep black hair, an attractive, high-cheekboned face, and strong dark eyes which at the moment were focused directly and coolly, on Ada Quonsett.

"Pardon me, madam. May I see your ticket?"

"My ticket? Why, of course." Mrs. Quonsett affected surprise though she guessed immediately what lay behind the question. Obviously her stowaway status was either suspected or known. But she had never given up easily, and even now her wiles were working. A question was: how much did this cost her now?

Mrs. Quonsett opened her purse and pretended to search through its papers. "I know I had it, my dear. It must be here somewhere." She glanced up, her expression innocent. "That stewardess the ticket man took it when I came aboard. Perhaps she lost it and I didn't notice."

"No," Gwen Meighen said, "he wouldn't have. If it was a round-trip ticket, you'd be holding a return flight coupon. If it was one-way, you'd still have the ticket stub and the boarding folder."

"Well, it certainly seems strange . . ." Mrs. Quonsett continued, fumbling in her purse.

Gwen inquired coldly, "Shall I look?" From the beginning of the air exchange, she had shown none of her customary kindness. She added, "If there's a ticket in your purse, I'll find it. If there isn't, it will save us both wasting time."

"Certainly not," Mrs. Quonsett said severely. Then, relenting, "I realize you mean no harm, my dear, but I have my papers here. You, being English, should respect privacy. We English, aren't you?"

"Whether I am or not doesn't matter. At this moment I'm talking about your ticket. That is, if you have one." Her voice, pitched louder than usual, was audible several rows away. Heads of other passengers were turning.

"I have a ticket. It's just a question of where it is." Mrs. Quonsett smiled engagingly. "About your being English, I could tell you were from the very first moment I saw you. So many English people—people like you, my dear—your language sound delightful. It's such a pity so few

this himself. But she didn't, and the moment of weakness passed.

"I said we know all about you, and we do," Gwen assured Mrs. Quonsett. "You were caught earlier today as a stowaway on one of our flights from Los Angeles. You were placed in custody, but you managed to slip away. Then, by lying, you got aboard this flight."

The little old lady from San Diego said brightly, "If you know so much, or think you do, it won't do any good arguing about it." Well, she decided, it was no good worrying now. After all, she had expected to get caught; at least she hadn't been until after she'd had an adventure and a good dinner. Besides, what did it matter? As the redheaded woman back at Lincoln admitted, airlines never prosecuted stowaways.

She was curious, though, about what came next. "Are we going to turn back?"

"You're not that important. When we land in Italy you'll be handed over to the authorities." Vernon Demerest had warned Gwen to let it be thought that Flight Two was proceeding on to Rome, certainly not to admit that they were already turned around and heading back. He also impressed on her that she must be rough with the old lady, which Gwen had not enjoyed. But it was necessary to make an impression on the passenger Guerrero, to carry out Demerest's next step.

Though Guerrero didn't know it—and if all went well, he would not know until too late to make any difference—this entire performance was solely for his benefit.

"You're to come with me," Gwen instructed Mrs. Quonsett. "The captain has had a signal about you, and he has to make a report. Before he does, he wants to see you." She asked the man in the aisle seat, "Will you let this woman out, please?"

For the first time the old lady looked nervous. "The captain wants me?"

"Yes, and he doesn't like to be kept waiting."

Hesitantly, Mrs. Quonsett released her seat belt. As the oboe player moved out, unhappily, to let her pass, she stepped uncertainly into the aisle. Taking her arm, Gwen propelled her forward, conscious of hostile glances all around—directed at herself—as they went.

Gwen resisted an impulse to turn, to see if the man with the case was watching too.

"I'm Captain Demerest," Vernon Demerest said. "Please come in—as far forward as you can. Gwen, shut the door and let's see if we can squeeze everybody in." He smiled at Mrs. Quonsett. "I'm afraid they don't design flight decks for entertaining visitors."

The old lady from San Diego peered toward him. After the bright lights of the passenger cabin from which she had just come, her eyes were not yet adjusted to the cockpit's semidarkness. All she could make out were shadowy figures, seated, surrounded by dozens of redly glowing dials. But there had been no mistaking the friendliness of the voice. Its effect and tone were far different from what she had braced herself to expect.

Cy Jordan pushed an armrest upward on an empty crew seat behind Anson Harris. Gwen—gently, in contrast to her behavior of a few minutes ago—guided the old lady into the seat.

There was still no turbulence outside, which made it easy to move around. Though losing height, they were still far above the storm, and despite the airplane's speed of more than five hundred miles an hour, it was riding easily as if on a calm, untroubled sea.

"Mrs. Quonsett," Vernon Demerest said, "whatever happened outside just now, you can forget it. It's not the reason you were brought here." He asked Gwen, "Were you pretty rough with her?"

"I'm afraid so."

"Miss Meighen was acting on my orders. I told her to do exactly what she did. We knew one particular person would be watching and listening. We wanted it to look good, to have a plausible reason for bringing you here."

The big shadowy figure speaking from the right-hand seat was becoming clearer to Ada Quonsett now. From what she could see of his face, he seemed a kind man, she thought. At the moment, of course, she had no idea what he was talking about. She looked about her. It was all very interesting. She had never been on a flight deck before. It was much more crowded and a smaller space than she expected. It was also warm, and the three men whom she could now see were all in shirtsleeves. This would certainly be something else to tell her daughter in New York—if she ever got there.

"Grandma," the man who had introduced himself as the captain said, "do you get frightened easily?"

It seemed an odd question, and she thought about it before answering. "Not easily, I think. I get nervous sometimes, though not as much as I used to. When you get older there isn't a lot left to be frightened of."

The captain's eyes were fixed searchingly on her face. "I've decided to tell you something, then ask for your help. We don't have too much time, so I'll make it fast. I suppose you've noticed the man sitting next to you, back in the cabin—on the window side."

"The skinny one, with the little mustache?"

"Yes," Gwen said. "That's him."

Mrs. Quonsett nodded. "He's a strange one. He won't talk to anybody, and he has a little case with him that he won't let go of. I think he's worried about something."

"We're worried, too," Vernon Demerest said quietly. "We've reason to believe that in that case he has a bomb. We want to get it away from him. That's why I need your help."

One of the surprising things about being up here with the pilots, Ada Quonsett thought, was how quiet it was. In the silence which followed what had just been said, she could hear a message coming in on an overhead speaker near where she was seated. "Trans America Two, this is Toronto Center. Your position is fifteen miles east of Kleinburg beacon. Advise your flight level and intentions."

The man in the other front seat, on the left, whose face she hadn't yet seen, was answering. "Toronto Center from Trans America Two. Leaving flight level two niner zero. Request continued slow descent until we advise. No change in our intentions to return for landing at Lincoln."

"Roger, Trans America. We are clearing traffic ahead of you. You may continue slow descent."

A third man, at a little table to her right, facing still more dials, leaned across to the one who had been speaking. "I make it an hour and seventeen minutes in. That's using forecast winds, but if the front's moved faster than expected, it could be less."

"We *are* going back, aren't we?" Mrs. Quonsett found it hard to restrain the excitement in her voice.

Demerest nodded. "But you're the only one who knows, besides ourselves. For the time being you must keep it a secret, and above all, Guerrero—that's the man with the case—mustn't find out."

Ada Quonsett thought breathlessly: was this really happen-

ing to her? It was all quite thrilling, like something on TV. It was a little frightening perhaps, but she decided not to think too much about that. The main thing was—she was here, a part of it all, hobnobbing with the captain, sharing secrets, and what would her daughter say about *that*?

"Well, will you help us?"

"Oh, of course. I expect you want me to see if I can get that case away . . ."

"No!" Vernon Demerest swung farther around, leaning over the back of his seat for emphasis. He said sternly, "You must not so much as put your hands on that case, or even near it."

"If you say so," Mrs. Quonsett acknowledged meekly, "I won't."

"I do say so. And remember, it's important that Guerrero have no idea we know about his case or what's inside. Now, as I did with Miss Meighen a little while ago, I'm going to tell you exactly what to do when you go back to the cabin. Please listen carefully."

When he had finished, the little old lady from San Diego permitted herself a small, brief smile. "Oh, yes; yes, I think I can do that."

She was getting out of her seat, with Gwen about to open the flight deck door for them to go, when Demerest asked, "That flight from Los Angeles you stowed away on—they said you were trying to reach New York. Why?"

She told him about being lonely sometimes on the West Coast, and wanting to visit her married daughter in the east.

"Grandma," Vernon Demerest said, "if we pull this off I'll personally guarantee that not only will any trouble you're in be taken care of, but this airline will give you a ticket to New York, and back, first class."

Mrs. Quonsett was so touched, she almost cried.

"Oh, thank you! Thank you!" For once she found it hard to speak. What a remarkable man, she thought; such a kind, dear man!

Her genuine emotion as she was about to leave the flight deck helped Mrs. Quonsett in her progress through the first class compartment and then into the tourist cabin. With Gwen Meighen grasping her arm tightly and shoving her along, the old lady dabbed at her eyes with her lace handkerchief, giving a tearful, credible performance of acute distress. She re-

mind herself, almost gleefully beneath her tears, that it was her second performance tonight. The first, when she pretended to be ill, had been staged in the terminal for the young passenger agent, Peter Coakley. She had been convincing then, so why not now?

The performance was sufficiently authentic for one passenger to ask Gwen heatedly, "Miss, whatever she's done, do you have to be so rough?"

Gwen replied tartly, already aware that she was within hearing of the man Guerrero, "Sir, please don't interfere."

As they passed into the tourist cabin, Gwen closed the draw curtain in the doorway separating the two passenger sections. That was part of Vernon's plan. Looking back the way they had come, toward the front of the aircraft, Gwen could see the flight deck door slightly ajar. Behind it, she knew, Vernon was waiting, watching. As soon as the curtain between first class and tourist was closed, Vernon would move aft and stand behind it, watching through a chink which Gwen was careful to leave open. Then, when the proper moment came, he would fling the curtain aside and rush through swiftly.

At the thought of what was going to happen within the next few minutes—whatever the outcome—once more an icy fear, a sense of premonition, came to Gwen. Once more she conquered it. Reminding herself of her responsibilities to the crew, and to the other passengers—who were oblivious of the drama being played out in their midst—she escorted Mrs. Quonsett the remaining distance to her seat.

The passenger Guerrero glanced up quickly, then away. The small attaché case, Gwen saw, was still in the same position on his knees, his hands holding it. The man from the aisle seat next to Mrs. Quonsett's—the oboe player—stood up as they approached. His expression sympathetic, he moved out to let the old lady in. Unobtrusively, Gwen moved in front of him, blocking his return. The aisle seat must remain unoccupied until Gwen moved out of the way. Gwen's eyes caught a flicker of movement through the chink she had left in the doorway curtain. Vernon Demerest was in position and ready.

"Please!" Still standing in the aisle, Mrs. Quonsett turned pleadingly, tearfully to Gwen. "I beg of you—ask the captain to reconsider. I don't want to be handed over to the Italian police . . ."

Gwen said harshly, "You should have thought of that before. Besides, I don't tell the captain what to do."

"But you can ask him! He'll listen to you."

D. O. Guerrero turned his head, took in the scene, then looked away.

Gwen seized the old lady's arm. "I'm telling you—get into that seat!"

Ada Quonsett's voice became a wail. "All I'm asking is to be taken back. Hand me over there, not in a strange country!"

From behind Gwen the oboe player protested, "Miss, can't you see the lady's upset?"

Gwen snapped, "Please keep out of this. This woman has no business here at all. She's a stowaway."

The oboist said indignantly, "I don't care what she is. She's still an old lady."

Ignoring him, Gwen gave Mrs. Quonsett a shove which sent her staggering. "You heard me! Sit down and be quiet."

Ada Quonsett dropped into her seat. She screamed, "You hurt me! You hurt me!"

Several passengers were on their feet, protesting.

D. O. Guerrero continued to look straight ahead. His hands, Gwen saw, were still on the attaché case.

Mrs. Quonsett wailed again.

Gwen said coldly, "You're hysterical." Deliberately, hating what she had to do, she leaned into the section of seats and slapped Mrs. Quonsett hard across the face. The slap resounded through the cabin. Passengers gasped. Two other stewardesses appeared incredulous. The oboist seized Gwen's arm; hastily she shook herself free.

What happened next occurred so swiftly that even those closest to the scene were uncertain of the sequence of events.

Mrs. Quonsett, in her seat, turned to D. O. Guerrero on her left. She appealed to him, "Sir, please help me! Help me!"

His features rigid, he ignored her.

Apparently overcome by grief and fear, she reached toward him, flinging her arms hysterically around his neck. "Please, please!"

Guerrero twisted his body away, trying to release himself. He failed. Instead, Ada Quonsett wound her arms around his neck more tightly. "Oh, help me!"

Red-faced and close to choking, D. O. Guerrero put up both hands to wrench her away. As if in supplication, Ada Quonsett eased her grasp and seized his hands.

At the same instant, Gwen Meighen leaned forward toward the inside seat. She reached out and in a single even movement—almost without haste—she grasped the attaché case firmly and removed it from Guerrero's knees. A moment later the case was free and in the aisle. Between Guerrero and the case, Gwen and Ada Quonsett were a solid barrier.

The curtain across the doorway from the first class cabin swept open. Vernon Demerest, tall and impressive in uniform, hurried through.

His face showing relief, he held out his hand for the attaché case. "Nice going, Gwen. Let me have it."

With ordinary luck the incident—except for dealing with Guerrero later—would have ended there. That it did not was solely due to Marcus Rathbone.

Rathbone, until that moment, was an unknown, unconsidered passenger, occupying seat fourteen-D across the aisle. Although others were unaware of him, he was a self-important, pompous man, constantly aware of himself.

In the small Iowa town where he lived he was a minor merchant, known to his neighbors as a "knocker." Whatever others in his community did or proposed, Marcus Rathbone objected to. His objections, small and large, were legendary. They included the choice of books in the local library, a plan for a community antennae system, the needed disciplining of his son at school, and the color of paint for a civic building. Shortly before departing on his present trip he had organized the defeat of a proposed sign ordinance which would have beautified his town's main street. Despite his habitual "knocking," he had never been known to propose a constructive idea.

Another peculiarity was that Marcus Rathbone despised women, including his own wife. None of his objections had ever been on their behalf. Consequently, the humiliation of Mrs. Quonsett a moment earlier had not disturbed him, but Gwen Meighen's seizure of D. O. Guerrero's attaché case did. To Marcus Rathbone this was officialdom in uniform—and a woman at that!—impinging on the rights of an ordinary traveler like himself. Indignantly, Rathbone rose from his seat, interposing himself between Gwen and Vernon Demerest.

At the same instant, D. O. Guerrero, flushed and mouthing incoherent words, scrambled free from his seat and the grasp of Ada Quonsett. As he reached the aisle, Marcus Rathbone

Demerest would try to persuade Guerrero to hand over the case. If he refused, there was still a chance that Demerest could leap forward, throw himself bodily onto Guerrero and wrest the case free before the trigger could be used. It would be a tremendous risk, but there was nothing better.

People were easing nervously back into their seats.

"Now that I've told you what we know, Guerrero; now you know that it isn't any good going on, I'm asking you to give me that case." Demerest tried to keep his tone reasonable, sensing it was important to keep talking. "If you do as I say, I give you my solemn word that no one in this airplane will harm you."

D. O. Guerrero's eyes mirrored fear. He moistened his lips with his tongue. Gwen Meighen was closest to him.

Demerest said quietly, "Gwen, take it easy. Try to get into your seat." If he had to leap, he wanted no one in the way.

Behind Guerrero the door of the occupied toilet opened. An owlish young man with thick glasses came out. He stopped, peering short-sightedly. Obviously he had heard nothing of what was going on.

Another passenger yelled, "Grab the guy with the case! He's got a bomb!"

At the first "click" of the toilet door, Guerrero half turned. Now he lunged, thrusting the man with glasses aside, and entered the toilet which the newcomer had vacated.

As Guerrero moved, Gwen Meighen moved too, remaining close behind him. Vernon Demerest, several yards away, was struggling fiercely aft, down the still crowded aisle.

The toilet door was closing as Gwen reached it. She thrust a foot inside and shoved. Her foot stopped the door from closing, but the door refused to move. Despairing, as she shot through her foot, she could feel Guerrero's weight against the other side.

In D. O. Guerrero's mind the last few minutes had been a jumbled blur. He had not fully comprehended everything that had occurred, nor had he heard all that Demerest said. But one thing penetrated. He realized that like so many of his other grand designs, this one, too, had failed. Somewhere, as always happened with whatever he attempted—he had bungled. All his life had been a failure. With bitterness, he knew his death would be a failure too.

His back was braced against the inside of the toilet door. He felt pressure on it, and knew that at any moment the

pressure would increase so that he could no longer hold the door closed. Desperately he fumbled with the attaché case, reaching for the string beneath the handle which would release the square of plastic, actuating the clothespin switch and detonating the dynamite inside. Even as he found the string and tugged, he wondered if the bomb he had made would be a failure also.

In his last split second of life and comprehension, D. O. Guerrero learned that it was not.

10

The explosion aboard Trans America Flight Two, *The Golden Argosy*, was instantaneous, monstrous, and overwhelming. In the airplane's confined space it struck with the din of a hundred thunderclaps, a sheet of flame, and a blow like a giant sledge hammer.

D. O. Guerrero died instantly, his body, near the core of the explosion, disintegrating utterly. One moment he existed; the next, there were only a few small, bloody pieces of him left.

The aircraft fuselage blew open.

Gwen Meighen, who, next to Guerrero, was nearest the explosion, received its force in her face and chest.

An instant after the dynamite charge ripped the aircraft skin, the cabin decompressed. With a second roar and tornado force, air inside the aircraft—until this moment maintained at normal pressure—swept through the ruptured fuselage to dissipate in the high altitude near-vacuum outside. Through the passenger cabins a dark engulfing cloud of dust surged toward the rear. With it, like litter in a maelstrom, went every loose object, light and heavy—papers, food trays, liquor bottles, coffeepots, hand luggage, clothing, passengers' belongings—all whirling through the air as if impelled toward a cyclopean vacuum cleaner. Curtains tore away. Internal doors—flight deck, storage, and toilets—wrenched free from locks and hinges and were swept rearward with the rest.

Several passengers were struck. Others, not strapped in their seats, clung to any handhold as the wind and suction drew them inexorably toward the rear.

Throughout the aircraft, emergency compartments above each seat snapped open. Yellow oxygen masks came tumbling down, each mask connected by a short plastic tube to a central oxygen supply.

Abruptly the suction lessened. The aircraft's interior was filled with mist and a savage, biting cold. Noise from engines and wind was overwhelming.

Vernon Demerest, still in the aisle of the tourist cabin where he had held himself by instinctively seizing a seatback, roared, "Get on oxygen!" He grabbed a mask himself.

Through knowledge and training, Demerest realized what most others did not: The air inside the cabin was now as rarefied as that outside, and insufficient to support life. Only fifteen seconds of full consciousness remained to everyone, unless oxygen was used at once from the aircraft's emergency system.

Even in five seconds, without the aid of oxygen, a degree of lessened judgment would occur.

In another five seconds a state of euphoria would make many decide not to bother with oxygen at all. They would lapse into unconsciousness, not caring.

Airlines had long been urged, by those who understood the hazards of decompression, to make pre-flight announcements about oxygen equipment more definite than they were. Passengers should be told, it was argued: *The instant an oxygen mask appears in front of you, grab it, stick your face into it, and ask questions after. If there is a real decompression, you haven't a single second to spare. If it's a false alarm, you can always take the mask off later; meanwhile it will do no harm.*

Pilots who took decompression tests were given a simple demonstration of the effect of oxygen lack at high altitudes. In a decompression tank, with an oxygen mask on, they were told to begin writing their signatures, and part way through the exercise their masks were removed. The signatures tailed off into a scrawl, or nothingness. Before unconsciousness occurred, the masks were put back on.

The pilots found it hard to believe what they saw on the page before them.

Yet airline managements, theorizing that more definite oxygen advice might create alarm among passengers, persisted in the use of innocuous flight announcements only. Smiling stewardesses, seeming either bored or amused, casually demonstrated the equipment while an unseen voice—hurrying to

it finished before takeoff—parroted phrases like: *In the unlikely event . . . and . . . Government regulations require that we inform you.* No mention was ever made of urgency, would the equipment be required for use.

As a result, passengers became as indifferent to emergency oxygen facilities as airlines and their staffs appeared to be. The overhead boxes and monotonous, always-alike demonstrations were (passengers reasoned) something dreamed up by a bunch of regulation-obsessed civil servants. (Yawn!) Obviously the whole thing was largely a charade, insisted on by the same kind of people who collected income taxes and disallowed expense accounts. *So what the hell!*

Occasionally, on regular flights, oxygen mask housings popped open accidentally, and masks dropped down in front of passengers. When this happened, most passengers stared curiously at the masks but made no attempt to put them on. Precisely that reaction—though the emergency was real—had occurred aboard Flight Two.

Vernon Demerest saw the reaction and in a flash of sudden anger remembered his own, and other pilots', criticisms of off-pedaled oxygen announcements. But there was no time to shout another warning, nor even to think of Gwen, who might be dead or dying only a few feet away.

Only one thing mattered: somehow to get back to the flight deck, and help save the airplane if he could.

Breathing oxygen deeply, he planned his movement forward in the aircraft.

Above every seat section in the tourist cabin, four oxygen masks had dropped—one for the occupant of each seat, plus a spare to be grabbed if necessary by anyone standing in the aisle. It was one of the spares which Demerest had seized and was using.

But to reach the flight deck he must abandon this mask and use a portable one that would permit him to move forward freely.

He knew that two portable oxygen cylinders were stowed, farther forward, in an overhead rack near the first class cabin bulkhead. If he could make it to the portable cylinders, either one would sustain him for the remaining distance from the bulkhead to the flight deck.

He moved forward to the bulkhead one seat section at a time, using one spare hanging mask after another as he went. A couple of seat sections ahead, he could see that all four

The objective was to instill quick, correct reactions at all times.

The simulators were located at important air bases and all major scheduled airlines had them.

From outside, a simulator looked like the nose of an aircraft, with the rest of the fuselage chopped off; inside, was everything included in a normal flight deck.

Once inside a simulator, pilots remained shut up for hours, imitating the precise conditions of a long distance flight. The effect, when the outside door was closed, was uncanny; even motion and noise were present, creating the physical effect of being airborne. All other conditions paralleled reality. A screen beyond the forward windows could conjure up airports and runways, enlarging or receding to simulate takeoff and landing. The only difference between a simulator flight deck and a genuine one was that the simulator never left the ground.

Pilots in a simulator conversed with a nearby control room, as they would on radio in the air. Within the control room, skilled operators duplicated air traffic control procedures and other flight conditions. The operators could also feed in adverse situations, without warning, to pilots. These ranged through multiple engine failure, to fire, violent weather, electrical and fuel problems, explosive decompression, instrument malfunction, and other assorted unpleasantness. Even a crash could be reproduced; sometimes simulators were used in reverse to find out what had caused one.

Occasionally an operator would feed in several emergencies at once, causing pilots to emerge later, exhausted and sweat-drenched. Most pilots coped with such tests; the few who didn't had the fact noted in their records, were re-examined, and afterward watched carefully. The simulator sessions continued, several times a year, through every stage of a pilot's career until retirement.

The result was: When a real emergency occurred, airline pilots knew exactly what to do, and did it, without fumbling or loss of precious time. It was one of many factors which made travel by scheduled airlines the safest means of transportation in human history. It had also conditioned Anson Harris to instant action, directed toward the salvation of Flight Two.

In the drill for explosive decompression one rule was fundamental: the crew took care of themselves first. Vernon

Demerest observed the rule; so did Anson Harris and Cy Jordan.

They must be on oxygen at once—even ahead of passengers. Then, with full mental faculties assured, decisions could be made.

Behind each pilot's seat a quick-don oxygen mask—resembling a baseball catcher's mask—was hanging. As he had practiced countless times, Harris ripped off his radio headset, then reached over his shoulder for the mask. He tugged, so that a holding clip snapped open, and slapped the mask on. As well as a connection to the airplane's oxygen supply, it contained a microphone. For listening, now his headset was removed, Harris changed a selector, actuating a speaker overhead.

Behind him, Cy Jordan, with identical swift movements, did the same.

In another reflex movement, Anson Harris took care of passengers. Cabin oxygen systems worked automatically in event of pressure failure; but as a precaution—in case they didn't—over the pilots' heads was an override switch. It ensured positive release of passenger masks and sent oxygen flowing into them. Harris flipped the switch.

He dropped his right hand to the throttles, pulling all four off. The aircraft slowed.

It must be slowed still more.

Left of the throttles was a speed brake handle. Harris pulled it fully toward him. Along the top surface of both wings, spoilers rose up, inducing drag, and causing further slowing.

Cy Jordan silenced the warning horn.

So far, all procedures had been automatic. Now, a moment for decision had arrived.

It was essential that the aircraft seek a safer altitude below. From its present height of twenty-eight thousand feet, it must descend some three and a half miles to where the air was denser so that passengers and crew could breathe and survive without supplemental oxygen.

The decision Harris had to make was—should the descent be slow, or a high-speed dive?

Until the past year or two, the instruction to pilots in event of explosive decompression was: dive immediately. Tragically, however, the instruction had resulted in at least one aircraft breaking apart when a slower descent might have saved it.

on the ground, a double blossom signal would be seen, confirming both their distress and identity.

They were going down fast, the altimeter unwinding like a clock with a wild mainspring . . . Passing through twenty-six thousand feet . . . twenty-four . . . twenty-three . . . Climb and descent meter showed eight thousand feet descent a minute . . . Toronto Air Route Center on the overhead speaker: "All altitudes below you are clear. Report your intentions when ready. We are standing by." . . . Harris had eased out of the turn, was diving straight ahead . . . No time to think about the cold; if they could get low enough fast enough, there might be survival—if the aircraft held together . . . Already Harris was aware of trouble with rudder control and elevators; rudder movement was stiff; stabilizer trim, not responding . . . Twenty-one thousand feet . . . twenty . . . nineteen . . . From the feel of the controls, the explosion had done damage to the tail; how bad, they would discover when he tried to pull out in a minute or less from now. It would be the moment of greatest strain. If anything critical gave way, they would continue plummeting in . . . Harris would have been glad of some help from the right seat, but it was too late for Cy Jordan to move there. Besides, the second officer was needed where he was—shutting air inlets, throwing in all the heat they had, watching for fuel system damage or fire warnings . . . Eighteen thousand feet . . . seventeen . . . When they reached fourteen thousand, Harris decided, he would start pulling out of the dive, hoping to level at ten . . . Passing through fifteen thousand . . . fourteen . . . Beginning to ease out now!

Controls were heavy, but responding . . . Harris pulled back hard on the control yoke. The dive was flattening; control surfaces holding, the aircraft coming out . . . Twelve thousand feet; descending more slowly now . . . eleven thousand . . . ten, five . . . ten!

They were level! So far, everything had held together. Here, the normal air was breathable and would sustain life; extra oxygen not necessary. The outside air temperature gauge showed minus five centigrade—five degrees below freezing; still cold, but not the killing cold of altitudes above.

From beginning to end, the dive had taken two and a half minutes.

The overhead speakers came alive. "Trans America Two, this is Toronto Center. How are you doing?"

Cy Jordan acknowledged. Anson Harris cut in. "Level at ten thousand, returning to heading two seven zero. We have structural damage due to explosion; extent unknown. Request weather and runway information—Toronto, Detroit Metropolitan, and Lincoln." In his mind, Harris had an instant picture of airports large enough to accommodate the Boeing 707, and with the special landing requirements he would need.

Vernon Demerest was clambering over the smashed flight deck door and other debris outside. Hurrying in, he slid into his seat on the right side.

"We missed you," Harris said.

"Can we maintain control?"

Harris nodded. "If the tail doesn't fall off, we may stay lucky." He reported the impeded rudder and stabilizer trim.

"Somebody let off a firecracker back there?"

"Something like that. It's made a bloody great hole. I didn't stop to measure."

Their casualness, both men knew, was on the surface only. Harris was still steadying the aircraft, seeking an even altitude and course. He said considerably, "It was a good scheme, Vernon. It could have worked."

"It could have, but it didn't." Demerest swung around to the second officer. "Get back in tourist. Check on damage, report by interphone. Then do all you can for the people. We'll need to know how many are hurt, and how badly." For the first time he permitted himself an anguished thought. "And find out about Gwen."

The airport reports, which Anson Harris had asked for, were coming in from Toronto center: Toronto airport still closed; deep snow and drifts on all runways. Detroit Metropolitan—all runways closed to regular traffic, but plows will vacate runway three left if essential for emergency approach and landing; runway has five to six inches level snow, with ice beneath. Detroit visibility, six hundred feet in snow flurries. Lincoln International—all runways plowed and serviceable; runway three zero temporarily closed, due to obstruction. Lincoln visibility one mile; wind northwest, thirty knots, and gusting.

Anson Harris told Demerest, "I don't intend to dump fuel."

Demerest, understanding Harris's reasoning, nodded agreement. Assuming they could keep the airplane under control, any landing they made would be tricky and heavy, due to the

large fuel load which in other circumstances would have carried them to Rome. Yet, in their present situation, to dump unwanted fuel could be an even greater hazard. The explosion and damage at the rear might have set up electrical short circuits, or metal friction, which even now could be producing sparks. When dumping fuel in flight, a single spark could turn an aircraft into a flaming holocaust. Both captains rationalized: better to avoid the fire risk and accept the penalty of a difficult landing.

Yet the same decision meant that a landing at Detroit—the nearest large airport—could be attempted only in desperation. Because of their heavy weight, they would have to land fast, requiring every available foot of runway and the last ounce of braking power. Runway three left—Detroit Metropolitan's longest, which they would need—had *ice beneath snow*, in the circumstances the worst possible combination.

There was also the unknown factor—wherever Flight Two landed—of how limited their control might be, due to rudder and stabilizer trim problems, which they already knew about, though not their extent.

For a landing, Lincoln International offered the best chance for safety. But Lincoln was at least an hour's flying time away. Their present speed—two hundred and fifty knots—was far slower than they had been moving at the higher altitude, and Anson Harris was holding the speed down, in the hope of avoiding further structural damage. Unfortunately, even that involved a penalty. At their present low level of a thousand feet there was considerable buffeting and turbulence from the storm, now all around them instead of far below.

The crucial question was: Could they remain in the air another hour?

Despite everything that had happened, less than five minutes had passed since the explosion and explosive decompression.

Air route control was asking again: "Trans America Two, advise your intentions."

Vernon Demerest replied, requesting a direct course for Detroit while the extent of damage was still being checked. Pending intentions, either at Detroit Metropolitan or elsewhere, would be notified within the next few minutes.

"Roger, Trans America Two. Detroit has advised they are removing snowplows from runway three left. Until informed otherwise, they will prepare for an emergency landing."

The intercom bell chimed and Demerest answered. It was Cy Jordan calling from the rear, shouting to make himself heard above a roar of wind. "Captain, there's a great hole back here, about six feet wide behind the rear door. Most else around the galley and toilets is a shambles. But as far as I can see, everything's holding together. The rudder power boost is blown to hell, but control cables look okay."

"What about control surfaces? Can you see anything?"

"It looks like the skin is bulged into the stabilizer, which is why the stabilizer's jammed. Apart from that, all I can see outside are some holes and bad dents, I guess from debris blowing back. But nothing's hanging loose—at least, that shows. Most of the blast, I'd say, went sideways."

It was this effect which D. O. Guerrero had not allowed for. He had blundered and miscalculated from the beginning. He bungled the explosion, too.

His greatest error was in failing to recognize that any explosion would be drawn outward and would largely dissipate, the moment the hull of a pressurized aircraft was pierced. Another error was in not realizing how stoutly a modern jetliner was built. In a passenger jet, structural and mechanical systems duplicated each other, so that no single malfunction or damage should result in destruction of the whole. An airliner could be destroyed by a bomb, but only if the bomb were detonated—either by plan or chance—in some vulnerable location. Guerrero made no such plan.

Demerest queried Cy Jordan, "Can we stay in the air an hour?"

"My guess is, the airplane can. I'm not sure about the passengers."

"How many are hurt?"

"I can't say yet. I checked structural damage first, the way you said. But things don't look good."

Demerest ordered, "Stay there as long as you need to. Do what you can." He hesitated, dreading what the answer to his next question might be, then asked, "Have you seen any sign of Gwen?" He still didn't know whether or not Gwen had been sucked out with the initial blast. In the past it had happened to others, including stewardesses who were near the

site of an explosive decompression, unprotected. And even if that had not happened, Gwen had still been closest to the detonated bomb.

Cy Jordan answered, "Gwen's here, but in pretty bad shape, I think. We've got about three doctors, and they're working on her and the others. I'll report when I can."

Vernon Demerest replaced the interphone. Despite his last question and its answer, he was still denying himself the indulgence of private thoughts or personal emotion; there would be time for those later. Professional decisions, the safety of the airplane and its complement, came first. He repeated to Anson Harris the gist of the second officer's report.

Harris considered, weighing all factors. Vernon Demerest had still given no indication of taking over direct command, and obviously approved of Harris's decisions so far, else he would have said so. Now, Demerest appeared to be leaving the decision about where to land to Harris also.

Captain Demerest—even in utmost crisis—was behaving exactly as a check pilot should.

"We'll try for Lincoln," Harris said. The safety of the aircraft was paramount; however bad conditions might be in the passenger cabin, they would have to hope that most people could manage to hold on.

Demerest nodded acknowledgment and began notifying Toronto Center of the decision; in a few minutes, Cleveland Center would take them over. Demerest requested that Detroit Metropolitan still stand by in case of a sudden change of plan, though it wasn't likely. Lincoln International was to be alerted that Flight Two would require a straight-in emergency approach.

"Roger, Trans America Two. Detroit and Lincoln are being advised." A change of course followed. They were nearing the western shore of Lake Huron, the U.S.-Canadian border close.

On the ground, both pilots knew, Flight Two was now the center of attention. Controllers and supervisors in contiguous air route centers would be working intensely, coordinating removal of all traffic from the aircraft's path, sectors ahead warned of their approach, and airways cleared. Any request they made would be acted on with first priority.

As they crossed the border, Toronto Center signed off, adding to the final exchange, "Goodnight and good luck."

Cleveland Air Route Center responded to their call a moment later.

Glancing back toward the passenger cabins; through the gap where the flight deck door had been, Demerest could see figures moving—though indistinctly, because immediately after the door had gone, Cy Jordan had dimmed the first class cabin lights to avoid reflection on the flight deck. It appeared, though, as if passengers were being ushered forward, indicating that someone in the rear had taken charge—presumably Cy Jordan, who should be reporting again at any moment. The cold was still biting, even on the flight deck; back there it must be colder still. Once more, with a second's anguish, Demerest thought of Gwen, then ruthlessly cleared his mind, concentrating on what must be decided next.

Though only minutes had elapsed since the decision to risk another hour in the air, the time to begin planning their approach and landing at Lincoln International was now. As Harris continued flying, Vernon Demerest selected approach and runway charts and spread them on his knees.

Lincoln International was home base for both pilots, and they knew the airport—as well as runways and surrounding airspace—intimately. Safety and training, however, required that memory should be supplemented and checked.

The charts confirmed what both already knew.

For the high speed, heavy weight landing they must execute, the longest possible length of runway was required. Because of doubtful rudder control, the runway should be the widest, too. It must also be directly into wind which—the Lincoln forecast had said—was northwest at thirty knots, and gusting. Runway three zero answered all requirements.

"We need three zero," Demerest said.

Harris pointed out, "That last report said a temporary closing, due to obstruction."

"I heard," Demerest growled. "The damn runway's been blocked for hours, and all that's in the way is a stuck Mexican jet." He folded a Lincoln approach chart and clipped it to his control yoke, then exclaimed angrily, "Obstruction hell. We'll give 'em fifty more minutes to pry it loose."

As Demerest thumbed his mike button to inform air traffic control, Second Officer Cy Jordan—white-faced and shaken—returned to the flight deck.

peace, their right to privacy, of their work-earned rest, and of their sleep. Thievery of enjoyment of their leisure; thievery of their mental and physical health, and of their children's health and welfare. All these things—basic rights under our Constitution—are being shamelessly stolen, without recompense or recognition, by the operators of Lincoln Airport."

The interviewer opened his mouth to smile, showing two rows of faultless teeth. "Counselor, those are fighting words."

"That's because my clients and I are in a fighting mood."

"Is that mood because of anything which has happened here tonight?"

"Yes, sir. We have seen demonstrated the callous indifference of this airport's management to my clients' problems."

"Just what are your plans?"

"In the courts—if necessary the highest court—we shall now seek closure of specific runways, even the entire airport during nighttime hours. In Europe, where they're more civilized about these things, Paris airport, for example, has a curfew. Failing that, we shall demand proper compensation for cruelly wronged homeowners."

"I assume that what you're doing at this moment means you're also seeking public support."

"Yes, sir."

"Do you believe the public will support you?"

"If they don't, I invite them to spend twenty-four hours living in Meadowood—providing their eardrums and sanity will stand it."

"Surely, Counselor, airports have official programs of noise abatement."

"A sham, sir! A fake! A public lie! The general manager of this airport confessed to me tonight that even the paltry, so-called noise abatement measures are not being observed."

And so on.

Afterward, Elliott Freemantle wondered if he should have qualified the statement about noise abatement procedures—as Bakersfeld had done—by referring to exceptional conditions of tonight's storm. But semi-truth or not, the way he had said it was stronger, and Freemantle doubted if it would be challenged. Anyway, he had given good performances—in the second interview as well as the first. Also during both filmings, the cameras panned several times over the intent, expressive faces of the assembled Meadowood clients. Elliott Freemantle hoped that when they saw the

their home screens tomorrow, they would remember who had been responsible for all the attention they were receiving.

The number of Meadowooders who had followed him to the airport—as if he were their personal Pied Piper—astonished him. Attendance at the meeting in the Sunday school hall at Meadowood had been roughly six hundred. In view of the bad night and lateness of the hour, he had thought they would be doing well if half that number made the farther trek to the airport; but not only did most of the original crowd come; some must have telephoned friends and neighbors who had joined them. He had even had requests for more copies of the printed forms retaining himself as legal counsel, which he was happy to pass out. Some revised mental arithmetic convinced him that his first hope of a fee from Meadowood totaling twenty-five thousand dollars might well be exceeded.

After the TV interviews, the *Tribune* reporter, Tomlinson—who had been taking notes during the filming—inquired, "What comes next, Mr. Freemantle? Do you intend to stage some kind of demonstration here?"

Freemantle shook his head. "Unfortunately the management of this airport does not believe in free speech, and we have been denied the elementary privilege of a public meeting. However"—he indicated the assembled Meadowooders—"I do intend to report to these ladies and gentlemen."

"Isn't that the same thing as a public meeting?"

"No, it is not."

Just the same, Elliott Freemantle conceded to himself, it would be a fine distinction, especially since he had every intention of turning what followed into a public demonstration if he could. His objective was to get started with an aggressive speech, which the airport police would dutifully order him to stop. Freemantle had no intention of resisting, or of getting arrested. Merely being halted by the police—if possible in full oratorical flow—would establish him as a Meadowood martyr and, incidentally, create one more color story for tomorrow's papers. (The morning papers, he imagined, had already closed with the earlier reports about himself and Meadowood; editors of the afternoon editions would be grateful for a new lead.)

Even more important, Meadowood homeowners would be further convinced that they had hired a strong counsel and leader, well worth his fee—the first installment checks for

which, Lawyer Freemantle hoped, would start flooding in right after tomorrow.

"We're all set to go," Floyd Zanetta, chairman of the earlier Meadowood meeting, reported.

While Freemantle and the *Tribune* newsman had been speaking, several of the Meadowood men had hastily assembled the portable p.a. system, brought from the Sunday school hall. One of the men now handed Freemantle a hand microphone. Using it, he began to address the crowd.

"My friends, we came here tonight in a mood of reason and with constructive thoughts. We sought to communicate that mood and thoughts to this airport's management, believing we had a real and urgent problem, worthy of careful consideration. On your behalf I attempted—in reasoned but firm terms—to make that problem known. I hoped to report back to you—at best, some promise of relief; at least, some sympathy and understanding. I regret to tell you that your delegation received none. Instead, we were accorded only hostility, abuse, and an uncaring, cynical assurance that in future the airport's noise above and around your homes is going to get worse."

There was a cry of outrage. Freemantle raised a hand. "Ask the others who were with me. *They* will tell you." He pointed to the front of the crowd. "Did this airport's general manager, or did he not, inform us that there was worse to come?" At first a shade reluctantly, then more definitely, those who had been in the delegation nodded.

Having skillfully misrepresented the honest frankness which Mel Bakersfeld had shown the delegation, Elliott Freemantle continued, "I see others, as well as my Meadowood friends and clients, who have stopped, with curiosity, to discover what is going on. We welcome their interest. Let me inform you . . ." He continued in his customary, haranguing style.

The crowd, sizable before, was now larger still, and continuing to grow. Travelers on their way to departure gates were having trouble getting through. Flight announcements were being drowned out by the noise. Among the Meadowooders, several had raised hastily scrawled signs which read: AIRLANES OR PEOPLE FIRST? . . . OUTLAW JETS FROM MEADOWOOD! . . . NIX NOXIOUS NOISE . . . MEADOWOOD PAYS TAXES TOO . . . IMPEACH LINCOLN!

Whenever Freemantle paused, the shouts and general uproar grew louder. A gray-haired man in a windbreaker yelled, "Let's give the airport a taste of their own noise." His words produced a roar of approval.

Without question, Elliott Freemantle's "report" had by now developed into a full-scale demonstration. At any moment, he expected, the police would intervene.

What Lawyer Freemantle did not know was that while the TV sessions were taking place and Meadowood residents assembling, the airport management's concern about Trans America Flight Two was beginning. Shortly after, every policeman in the terminal was concentrating on a search for Inez Guerrero, and thus the Meadowood demonstration escaped attention.

Even after Inez was found, Police Lieutenant Ordway remained occupied with the emergency session in Mel Bakersfeld's office.

As a result, after another fifteen minutes, Elliott Freemantle was becoming worried. Impressive as the demonstration was, unless halted officially, it would have little point. *Where, in God's name, he thought, were the airport police, and why weren't they doing their job?*

It was then that Lieutenant Ordway and Mel Bakersfeld came down together from the administrative mezzanine.

Several minutes earlier the meeting in Mel's office had broken up. After the interrogation of Inez Guerrero and dispatch of the second warning message to Flight Two, there was nothing to be gained by retaining everyone together. Tanya Livingston, with the Trans America D.T.M. and chief pilot, returned anxiously to the airline's offices in the terminal, to await any fresh news there. The others—with the exception of Inez Guerrero, who was being held for questioning by downtown police detectives—returned to their own bailiwicks. Tanya had promised to notify Customs Inspector Standish, who was distressed and anxious about his niece aboard Flight Two, immediately there was any new development.

Mel, not certain where he would keep his own vigil, left his office with Ned Ordway.

Ordway saw the Meadowood demonstration first and caught sight of Elliott Freemantle. "That damn lawyer! I told him there'd be no demonstrations here." He hurried toward the concourse around "Elliot's building."

Alongside, Mel cautioned, "He may be counting on you doing that—just so he can be a hero."

As they came nearer, Ordway shouldering his way ahead through the crowd, Elliott Freemantle proclaimed, "Despite assurances from the airport management earlier this evening, heavy air traffic—deafening and shattering as always—is still continuing at this late hour. Even now . . ."

"Never mind that," Ned Ordway cut in brusquely. "I already told you there would be no demonstrations in this terminal."

"But, Lieutenant, I assure you this is not a demonstration." Freemantle still held the microphone, so that his words carried clearly. "All that's happened is that I granted a television interview after a meeting with the airport management—I might say a highly unsatisfactory meeting—then reported to these people . . ."

"Report some place else!" Ordway swung around, facing others nearest him. "Now, let's break this up!"

There were hostile glances and angry mutterings among the crowd. As the policeman turned back to Elliott Freemantle, photographers' flash bulbs popped. TV floodlights, which had been turned off, went bright once more as television cameras focused on the two. At last, Elliott Freemantle thought, everything was going just the way he wanted.

On the fringe of the crowd, Mel Bakersfeld was talking with one of the TV men and Tomlinson of the *Tribune*. The reporter was consulting his notes and reading a passage back. As he listened, Mel's face suffused with anger.

"Lieutenant," Elliott Freemantle was saying to Ned Ordway, "I have the greatest respect for you and for your uniform. Just the same, I'd like to point out that we did hold a meeting some place else tonight—at Meadowood—but because of noise from this airport, we couldn't hear ourselves."

Ordway snapped back, "I'm not here for a debate, Mr. Freemantle. If you don't do as I say, you'll be arrested. I'm ordering you to get this group out of here."

Someone in the crowd shouted, "Suppose we won't go?"

Another voice urged, "Let's stay here! They can't arrest all of us."

"No!" Elliott Freemantle held up a hand self-righteously. "Please listen to me! There will be no disorder; no disobedience. My friends and clients—this police officer has ordered us to desist and leave. We will comply with his order. We

may consider it a grave restriction of free speech" . . . there were responsive cheers and booing . . . "but let it not be said that at any point we failed to respect the law." More crisply, he added, "I shall have a statement for the press outside."

"One moment!" Mel Bakersfeld's voice cut sharply across the heads of others. He thrust his way forward. "Freemantle, I'm interested to know what will be in that press statement of yours. Will it be more misrepresentation? Another dose of distorted law reports to delude people who don't know any better? Or just plain, old-fashioned fabrication which you're so expert at?"

Mel spoke loudly, his words carrying to those nearby. There was a buzz of interested reaction. People who had begun drifting away, stopped.

Elliott Freemantle reacted automatically. "That's a malicious, libelous statement!" An instant later, scenting danger, he shrugged. "However, I shall let it pass."

"Why? If it *is* libelous, you should know how to handle it." Mel faced the lawyer squarely. "Or perhaps you're afraid of it proving true."

"I'm afraid of nothing, Mr. Bakersfeld. The fact is, we've been told by this policeman that the party's over. Now, if you'll excuse me . . ."

"I said it was over for you," Ned Ordway pointed out. "What Mr. Bakersfeld does is something again. He has authority here." Ordway had moved beside Mel; together they blocked the lawyer's way.

"If you were a real policeman," Freemantle objected, "you'd treat us both equally."

Mel said unexpectedly, "I think he's right." Ordway glanced at him curiously. "You *should* treat us both equally. And instead of closing this meeting, I think you should allow me the same privilege of talking to these people which Mr. Freemantle just had. That is, if you want to be a real policeman."

"I guess I want to be." The big Negro police lieutenant, towering above the other two, was grinning. "I'm beginning to see it your way—and Mr. Freemantle's."

Mel observed blandly to Elliott Freemantle, "You see, he's come around. Now, since we're all here, we may as well clear up a few things." He held out his hand. "Let me have that microphone."

Mel's anger of a minute or two ago was now less apparent. When the *Tribune* reporter, Tomlinson, had read back from

is notes the gist of what Elliott Freemantle stated in his TV interviews and later, Mel reacted heatedly. Both Tomlinson and the TV producer asked Mel to comment on what had been said. He assured them that he would.

"Oh no!" Freemantle shook his head decisively. The danger which he scented a few moments earlier was suddenly close and real. Once before, tonight, he had underestimated his man Bakersfeld; he had no intention of repeating that mistake. Freemantle himself now had the assembled Meadowood residents firmly under control; it was essential to his purpose that they remain that way. All he wanted at this moment was for everyone to disperse quickly.

He declared loftily, "More than enough has been said." Ignoring Mel, he passed the microphone to one of the Meadowood men and indicated the p.a. equipment. "Let's get all his apart and be on our way."

"I'll take that." Ned Ordway reached over and intercepted the microphone. "And leave the rest where it is." He nodded to several other policemen who had appeared on the fringes of the crowd. They moved in. While Freemantle watched helplessly, Ordway handed the microphone to Mel.

"Thank you." Mel faced the crowd of Meadowooders—many of their faces hostile—and others who, passing through the terminal, had stopped to listen. Though it was twenty minutes after midnight, and now Saturday morning, the heavy traffic in the main concourse showed no sign of lessening. Because of many delayed flights, pressures would probably continue through the remainder of the night, merging with a heightened weekend activity until schedules got back to normal. If one of the Meadowood objectives was to create a nuisance effect, Mel thought, it was succeeding. The extra thousand or so people were taxing available space in the concourse, arriving and departing passengers having to fight their way around like a flood tide encountering a sudden sandbank. Obviously the situation must not continue for more than a few minutes.

"I'll be brief," Mel said. He spoke into the microphone, telling them who and what he was.

"Earlier tonight I met a delegation representing all of you. I explained some of the airport's problems: and they understood and sympathized with yours. I expected that what I said to be passed along, if not exactly, then in substance."

stance. Instead, I find that I have been misrepresented and you have been deceived."

Elliott Freemantle emitted a roar of rage. "That's a lie!" His face was flushed. For the first time tonight his impeccably styled hair was disarrayed.

Lieutenant Ordway grasped the lawyer firmly by the arm. "Hush up, now! You had your turn."

In front of Mel a broadcast microphone had joined the hand mike he was using. The TV lights were on as he continued.

"Mr. Freemantle accuses me of lying. He's been strong in his use of words tonight." Mel consulted a note in his hand. "I understand they include 'thievery,' 'indifference,' that I met your delegation with 'hostility and abuse'; further, that the noise abatement measures we are trying to enforce are a 'sham, a fake, and a public lie.' Well, we'll see what you think about who's lying—or misrepresenting—and who is not."

He had made an error earlier, Mel realized, in speaking to the small delegation and not to this main group. His objectives had been to achieve understanding, yet avoid disruption in the terminal. Both objectives had failed.

But at least he would aim for understanding now.

"Let me outline this airport's policy on noise suppression."

For the second time tonight Mel described the operating limitations on pilots and their employer airlines. He added, "At normal times these restrictions are enforced. But in difficult weather, such as tonight's storm, pilots must be given leeway, and aircraft safety must come first."

As to runways: "Wherever possible we avoid takeoffs over Meadowood from runway two five." Yet, he explained, there was occasional need to use that runway when runway three zero was out of commission, as at present.

"We do our best for you," Mel insisted, "and we are not indifferent, as has been alleged. But we are in business as an airport and we cannot escape our basic responsibilities, plus our concern for aviation safety."

The hostility among his audience was still apparent, but now there was interest as well.

Elliott Freemantle—glaring at Mel and fuming—was aware of the interest too.

"From what I've heard," Mel said, "Mr. Freemantle chose not to pass on some observations I offered to your delegation

n the general subject of airport noise. My remarks were made"—he consulted his notes again—"not in 'uncaring cynicism,' as has been suggested, but in an attempt at honest frankness. I intend to share that frankness with you here."

Now, as earlier, Mel admitted there was little more in the area of noise reduction which could be done; glum expressions appeared when he described the expected greater noise from new aircraft soon to be in use. But he sensed there was appreciation for objective honesty. Beyond a few scattered remarks, there were no interruptions, his words remaining audible above the background noises of the terminal.

"There are two other things which I did not mention to your delegation, but now I intend to." Mel's voice hardened. "I doubt if you will like them."

The first point, he informed them, concerned Meadowood community.

"Twelve years ago your community didn't exist. It was a parcel of empty land—of low value until the airport's growth and closeness sent surrounding values soaring. To that extent your Meadowood is like thousands of communities which have mushroomed around airports everywhere in the world."

A woman shouted, "When we came to live here, we didn't know about jet noise."

"But we did!" Mel pointed a finger at the woman. "Airport managements knew that jet airplanes were coming, and knew what jet noise would be like, and we warned people, and local zoning commissions, and pleaded with them in countless Meadowoods *not to build homes*. I wasn't at this airport then, but there are records and pictures in our files. This airport put up signs where Meadowood is now: AIRPLANES WILL TAKE OFF AND LAND OVER THIS ROUTE. Other airports did the same. And everywhere the signs appeared, real estate developers and salesmen tore them down. Then they sold land and houses to people like you, keeping quiet about the noise to come, and airport expansion plans—which usually they knew of—and I guess in the end the real estate people outwitted us all."

This time there was no rejoinder, only a sea of thoughtful faces, and Mel guessed that what he had said had struck home. He had a sense of keen regret. These were not antagonists whom he wanted to defeat. They were decent people with a real and pressing problem; neighbors for whom he wished he could do more.

He caught sight of Elliott Freemantle's sneering features. "Bakersfeld, I suppose you think that's pretty clever." The lawyer turned away, shouting over nearer heads without benefit of amplifier. "Don't believe all that! You're being soft on me! If you stick with me, we'll take these airport people, we'll take them good!"

"In case any of you didn't hear," Mel said into the microphone, "that was Mr. Freemantle advising you to stick with me. I have something to say about that, too."

He told the now attentive crowd, "Many people—people like you—have had advantage taken of them by being located on land or homes in areas which should not have been developed, or should have been developed for industrial use where airport noise doesn't matter. You haven't lost out entirely because you have your land and homes; but chances are that their values have decreased."

A man said gloomily, "Damn right!"

"Now there's another scheme afoot to part you from your money. Lawyers all over North America are hot-footing it to start airport dormitory communities because 'that's gold in that noise.'"

Lawyer Freemantle, his face flushed and distorted, shrilled, "You say one more word—I'll sue you!"

"For what?" Mel shot back. "Or have you guessed already what I'm going to say?" Well, he thought, maybe Freemantle would launch a libel action later, though he doubted it. Either way, Mel felt some of his old recklessness—a decision to speak plain speaking, and never mind the consequences—take command. It was a feeling which, in the past year or two, he had experienced rarely.

"Residents in the communities I spoke of," Mel argued, "are being assured that airports can be sued—successfully. Homeowners near airports are being promised there's a lot of dollars at every runway's end. Well, I'm not saying airports can't be sued, nor am I saying there aren't some fine, soulful lawyers engaged in anti-airport litigation. What I'm warning you is that there are a good many of the other kind, too."

The same woman who had called out before asked—more mildly this time—"How are we supposed to know which is which?"

"It's difficult without a program; in other words, unless you happen to know some airport law. If you don't, you can be bamboozled by a one-sided list of legal precedents." Mel had

ed only briefly before adding, "I've heard a few specific decisions mentioned tonight. If you wish, I'll tell you other side to them."

A man at the front said, "Let's hear your version, mister." Several people were looking curiously at Elliott Freemantle. Mel had hesitated, realizing that this had already gone on longer than he intended. He supposed, though, that a few minutes more would make no difference.

On the fringes of the crowd he caught sight of Tanya Livingston.

"The legal cases which you and I have both heard referred to," Mel said, "are old hat to people who run airports. The first, I think, was *U.S. v. Causby*."

That particular case—a pillar of Lawyer Freemantle's presentation to the Meadowood group—was, Mel explained, a decision more than twenty years old. "It concerned a chicken farmer and military airplanes. The airplanes repeatedly flew over the farmer's house, as low as sixty-seven feet—whole lot lower than any airplane ever comes near Meadowood. The chickens were frightened; some died."

After years of litigation the case found its way to the U.S. Supreme Court. Mel pointed out: "The total damages awarded were less than four hundred dollars—the value of the dead chickens."

He added, "There was no pot of dollars for the farmer, or is there—in that legal precedent—for you."

Mel could see Elliott Freemantle, his face alternately crimson and white with rage. Ned Ordway was once more holding the lawyer by the arm.

"There is one legal case," Mel observed, "which Mr. Freemantle has chosen not to mention. It's an important one—also involving a Supreme Court ruling—and well known. Unfortunately for Mr. Freemantle, it doesn't support his arguments, but runs counter to them."

The case, he explained, was *Batten v. Batten* in which, in 1963, the Supreme Court ruled that only an actual "physical invasion" created liability. Noise alone was not enough.

Mel continued, "Another ruling, along the same lines, was *Loma Portal Civic Club v. American Airlines*—a 1964 decision of the California Supreme Court." In this, he reported, the Court ruled that property owners were not entitled to restrict the flight of aircraft over houses near an airport.

Public interest in continuance of air travel, the California court laid down, was paramount and overwhelming . . .

Mel had quoted the legal cases unhesitatingly, without reference to notes. Clearly his audience was impressed. Now he smiled. "Legal precedents are like statistics. If you manipulate them, you can prove anything." He added, "You don't have to take my word for what I've told you. Look it up. It's all on record."

A woman near Elliott Freemantle grumbled at him, "You didn't tell us all that. You just gave your side."

Some of the hostility directed at Mel earlier was now transferred toward the lawyer.

Freemantle shrugged. After all, he decided, he still had more than a hundred and sixty signed retainer forms, which he had been careful to transfer to a locked bag in the trunk of his car. Nothing that was said here could undo the fact of those.

A moment or two later he began to wonder.

Mel Bakersfeld was being asked by several people about legal contract forms which they had signed this evening. Their voices betrayed doubt. Obviously Mel's manner, as well as what he said, had made a strong impression. The crowd was dividing into small groups, most in animated discussion.

"I've been asked about a certain contract," Mel announced within the crowd, other voices silenced as he added, "I think you know the contract I mean. I have seen a copy of it."

Elliott Freemantle pushed forward. "So what! You aren't a lawyer; we've settled that once before. Therefore you're no authority on contracts." This time Freemantle was close enough to the microphone for his words to carry.

Mel snapped back, "I live with contracts! Every lessee in this airport—from the biggest airline to a headache pill concessionaire—operates under a contract approved by me, and negotiated by my staff."

He swung back to the crowd. "Mr. Freemantle points out correctly, that I am not a lawyer; so I'll give you a businessman's advice. In certain circumstances the contracts you signed tonight could be enforceable. A contract is a contract you *could* be taken to debtor's court; the money might be collected. But my opinion is that, providing you serve properly immediately, neither thing will happen. For one thing you have received no goods; no service has been rendered

For another, each of you would have to be sued separately." Mel smiled. "That, in itself, would be an undertaking.

"One more thing." He looked directly at Elliott Freemantle. "I do not believe that any court would look favorably on a total legal fee in the region of fifteen thousand dollars for legal service which, at best, was nebulous."

The man who had spoken earlier asked, "So what do we do?"

"If you've genuinely changed your mind, I suggest that today or tomorrow you write a letter. Address it to Mr. Freemantle. In it, state that you no longer want legal representation as arranged, and why. Be sure to keep a copy. Again, in my opinion—that's the last you'll ever hear."

Mel had been blunter than he at first intended, and he had also been excessively reckless, he supposed, in going quite this far. If Elliott Freemantle chose, he could certainly make trouble. In a matter in which the airport—and therefore Mel—had active interest, Mel had interposed between clients and lawyer, casting doubt upon the latter's probity. Judging by the hatred in the lawyer's eyes, he would be delighted to do any harm to Mel he could. Yet instinct told Mel that the last thing Freemantle wanted was a searching public scrutiny of his client recruiting methods and working habits. A trial judge, sensitive about legal ethics, might ask awkward questions; later still, so might the Bar Association, which safeguarded the legal profession's standards. The more Mel thought about it, the less inclined he was to worry.

Though Mel didn't know it, Elliott Freemantle had reached the same conclusion.

Whatever else Freemantle might be, he was a pragmatist. He had long ago recognized that in life there were gambits which you won, others that you lost. Sometimes the loss was sudden and illogical. A chance, a quirk, a nettle in the grass, could turn an almost-grasped success into mortifying defeat. Fortunately for people like Freemantle, the reverse was sometimes true.

The airport manager, Bakersfeld, had proven to be a nettle—carelessly grasped—which should have been avoided. Even after their first brush, which Elliott Freemantle now realized could have been a warning to him, he had continued to underestimate his opponent by remaining at the airport instead of quitting while ahead. Another thing Freemantle had discovered too late was that Bakersfeld, while shrewd, was

a gambler too. Only a gambler would have gone out on such a limb as Bakersfeld had a moment ago. And only Elliott Freemantle—at this point—knew that Bakersfeld had won.

Freemantle was aware that the Bar Association might regard this night's activity unfavorably. More to the point: He had had a brush with an association investigating committee once already, and had no intention of provoking another.

Bakersfeld had been right, Elliott Freemantle thought. There would be no attempted debt collecting, through the courts, on the basis of the signed legal retainer forms. The hazards were too great, the spoils uncertain.

He would not give up entirely, of course. Tomorrow, Freemantle decided, he would draft a letter to all Meadowood residents who had signed the forms; in it he would do his best to persuade them that retention of himself as legal counsel, at the individual fee specified, should continue. He doubted, though, if many would respond. The suspicion which Bakersfeld had effectively implanted—*damn his guts!*—was too great. There might be some small pickings left, from a few people who would be willing to continue, and later it would be necessary to decide if they were worth while. But the prospect of a big killing was gone.

Something else, though, he supposed, would turn up soon. It always had.

Ned Ordway and several other policemen were now dispersing the crowd; normal traffic through the concourse was resuming. The portable p.a. system was at last being disassembled and removed.

Mel Bakersfeld noticed that Tanya, whom he had caught sight of a moment or two ago, was making her way in his direction.

A woman—one of the Meadowood residents whom Mel had noticed several times before—confronted him. She had a strong intelligent face and shoulder-length brown hair.

"Mr. Bakersfeld," the woman said quietly. "We've all talked a lot, and we understand a few things better than we did. But we still haven't heard anything that I can tell my children when they cry, and ask why the noise won't stop so they can sleep."

Mel shook his head regretfully. In a few words the woman had pointed up the futility of everything which had happened tonight. He knew he had no answer for her. He doubted—while airports and dwellings remained in proximity—if there would ever be one.

He was still wondering what to say when Tanya handed him a folded sheet of paper.

Opening it, he read the message which showed signs of being hastily typed:

flight 2 had mid-air explosion.
structural damage & injuries.
now heading here 4 emergency
landing, est. arrival 0130.
capt. says must have runway
three zero. tower reports runway still
blocked.

12

the bloody shambles which was the scene of the crash of Flight Two, Dr. Milton Compagno, the physician on board, was exerting the utmost of his professional skill in an attempt to save Gwen Meighan's life. He was not sure he could succeed.

When the initial explosion from D. O. Guerrero's bomb occurred, Gwen—next to Guerrero—was hurled toward the explosion's center.

In other circumstances she would have been killed, as was D. O. Guerrero. Two things—her quick reflexes—saved her.

Interposed between Gwen and the explosion was Guerrero's body and the aircraft toilet door. Neither provided a protective shield, yet the two together were sufficient to absorb the initial force of the explosion for a fraction of a second.

Within that fractional time the airplane was struck by the second explosion—explosive decomposition of the fuel tank.

The dynamite blast still struck Gwen. She was hurled forward, gravely injured and bleeding. In the instant following the explosion—the outward rush of the fuselage at the aircraft's nose—the two tornadoes met head on. An upward gust of air triumphed, sweeping the wreckage into the high-altitude, darkened sky.

Despite the forcefulness of the explosion, the wreckage was widely spread.

Gwen Meighen, the most critically hurt, lay unconscious in the aisle. Next to her, the owlish young man who had emerged from the toilet and startled Guerrero, was wounded bleeding badly, and dazed, but still on his feet and conscious. A half dozen passengers nearby sustained cuts and contusions from splinters and bomb fragments. Others were struck, and stunned or bruised by hurtling objects impelled toward the aircraft's rear by the explosive decompression, but none of the latter injuries was major.

At first, after decompression, all who were not secure in seats were impelled by suction toward the gaping hole in the aircraft's rear. From this danger, too, Gwen Meighen was in gravest peril. But she had fallen so that an arm—instinctively or accidentally—encircled a seat base. It prevented her from being dragged farther, and her body blocked others.

After the initial outrush of air, the suction lessened.

Now, the greatest immediate danger for all—injured or not—was lack of oxygen.

Although oxygen masks dropped promptly from their housings, only a handful of passengers had grasped and put them on at once.

Before it was too late, however, a few people had acted. Stewardesses, responding to their training, and wherever they happened to be, seized masks and motioned others to do likewise. Three doctors, traveling with their wives as members of an off-season vacation tour, realized the need for speed. They donned masks themselves and gave hasty instructions to those around them. Judy, the alert, eighteen-year-old niece of Customs Inspector Standish, placed a mask over the face of the baby in the seat beside her, as well as over her own. She then immediately signaled the baby's parents, and others across the aisle, to use oxygen. Mrs. Quonsett, the old lady stowaway, having observed oxygen demonstrations many times during her illegal flights, knew what to do. She took a mask herself and handed one to her friend, the oboe player, whom she pulled back into his seat beside her. Mrs. Quonsett had no idea if she was going to live or die, and found herself not greatly worried; but whatever happened, she intended to know what was going on until the very last moment.

Someone thrust a mask at the young man near Gwen who had been wounded. Though swaying, and scarcely aware of what was happening, he managed to hold it to his face.

Even so, barely half the passengers were on oxygen at the end of fifteen seconds—the critical time. By then, those not breathing oxygen were lapsing into drowsy stupor; in another fifteen seconds, most were unconscious.

Gwen Meighen received no oxygen, nor immediate help. The unconsciousness, caused by her injuries, deepened.

Then, on the flight deck, Anson Harris, accepting the risk of further structural damage and possible total destruction of the aircraft, made his decision for a high speed dive, saving Gwen and others from asphyxiation.

The dive began at twenty-eight thousand feet altitude; it ended, two and a half minutes later, at ten thousand feet.

A human being can survive without oxygen for three to four minutes without damage to the brain.

For the first half of the dive—for a minute and a quarter, down to nineteen thousand feet—the air continued to be rarefied, and insufficient to support life. Below that point, increasing amounts of oxygen were present and breathable.

At twelve thousand feet regular breathing was possible. By ten—with little time to spare, but enough—consciousness returned to all aboard Flight Two who had lost it, excepting Gwen. Many were unaware of having been unconscious at all.

Gradually, as initial shock wore off, passengers and the remaining stewardesses took stock of their situation. The stewardess who was second in seniority after Gwen—a pert blonde from Oak Lawn, Illinois—hurried toward the injured at the rear. Though her face paled, she called urgently, "Is there a doctor, please?"

"Yes, miss." Dr. Compagno had already moved from his seat without waiting to be called. A small, sharp-featured man who moved impatiently and talked quickly with a Brooklyn accent, he surveyed the scene hurriedly, conscious of the already biting cold, the wind streaming noisily through the gaping hole in the fuselage. Where the toilets and rear galley had been was a twisted mess of charred and bloodstained wood and metal. The back of the fuselage to the interior of the tail was open, with control wires and structural assemblies exposed.

The doctor raised his voice to make himself heard above the noise of wind and engines, constant and encompassing now that the cabin was no longer sealed.

"I suggest you move as many people as you can nearer the

front. Keep everyone as warm as possible. We'll need blankets for those who are hurt."

The stewardess said doubtfully, "I'll try to find some. Many of the blankets normally stored in overhead racks have been swept out, along with passengers' extra clothing and other objects, in the whirlwind of decompression."

The two other doctors from Dr. Compagno's tour party joined him. One instructed another stewardess, "Bring us the first aid equipment you have." Compagno—already his knees beside Gwen—was the only one of the three with a medical bag.

Carrying a bag with emergency supplies wherever he went was characteristic of Milton Compagno. So was taking chances now, even though—as a G.P.—he was outranked professionally by the other two doctors who were internists.

Milton Compagno never considered himself off duty. Thirty-five years ago, as a young man who had fought an upward battle from a New York slum, he hung out a shingle in Chicago's Little Italy, near Milwaukee and Grand Avenues. Since then—as his wife told it, usually with resignation—the only time he ceased practicing medicine was while he slept. He enjoyed being needed. He acted as if his profession were a prize he had won, which, if not guarded, would slip away. He had never been known to refuse to see a patient at a moment's hour, or to fail to make a house call if sent for. He never drove past an accident scene as did many of his medical brethren, fearing malpractice suits; he always stopped, got out of his car, and did what he could. He kept conscientiously up to date. Yet the more he worked, the more he seemed to thrive. He gave the impression of running through each day as if he planned to assuage the world's ailments in a lifetime of which too little was left.

The journey to Rome—many years postponed—was to visit the birthplace of his parents. With his wife, Dr. Compagno was to be away a month, and because he was growing old, he had agreed that the time should be a total rest. Yet he fully anticipated that somewhere en route, or perhaps in Italy (never mind regulations about not being licensed) a doctor would be needed. If so, he was ready. It did not surprise him that he was needed now.

He moved first to Gwen who was clearly most critical among those hurt. He told his colleagues, over his shoulder, "You attend to the others."

In the narrow aisle, Dr. Compagno turned Gwen over partially, leaning forward to detect if she was breathing. She was, but her breath was light and shallow. He called to the stewardess he had been speaking to, "I need oxygen down here." While the girl brought a portable bottle and mask, he checked Gwen's mouth for an unobstructed airway; there were smashed teeth, which he removed, and a good deal of blood; he made sure the bleeding was not preventing respiration. He told the stewardess, "Hold the mask in place." The oxygen hissed. Within a minute or two a vestige of color returned to Gwen's skin, which had been ominously white.

Meanwhile, he began to control bleeding, extensive around the face and chest. Working quickly, he used a hemostat to clamp off a facial artery—worst site of external hemorrhage—and pressure dressings elsewhere. He had already detected a probable fracture of the clavicle and left arm, which would need to be splinted later. He was distressed to see what appeared to be splinters from the explosion in the patient's left eye; he was less sure about the right.

Second Officer Jordan, having moved carefully around Dr. Compagno and Gwen, took charge of the remaining stewardesses and was supervising the movement of passengers forward in the aircraft. As many tourist passengers as possible were being moved into the first class section, some squeezed in, two to a seat, others directed to the small, semicircular first class lounge, where spare seats were available. Such extra clothing as remained was distributed among those who appeared to need it most, without regard to ownership. As always, in such situations, people showed a willingness to help one another, unselfishness, and even flashes of humor.

The other two doctors were bandaging passengers who had received cuts, none excessively serious. The young man with glasses, who was behind Gwen at the moment of the explosion, had a deep gash in one arm, but it could be repaired and would heal. He had other minor cuts about the face and shoulders. For the time being, pressure dressings were applied to his injured arm, and he was given morphine, while being made as comfortable and warm as possible.

Both the medical attention and movement of passengers was being made more difficult by heavy buffeting which the aircraft, at its present low altitude, was taking from the storm. There was constant turbulence, punctuated every few minutes by violent pitching or sideways mo- Several

passengers were finding airsickness added to their other troubles.

After reporting to the flight deck for the second time, Cy Jordan returned to Dr. Compagno.

"Doctor, Captain Demerest asked me to say he's grateful for everything you and the other doctors are doing. When you can spare a moment, he'd appreciate it if you'd come to the flight deck to tell him what to radio ahead about casualties."

"Hold this dressing," Dr. Compagno ordered. "Press down hard, right there. Now I want you to help me with a splint. We'll use one of those leather magazine covers, with a towel under it. Get the biggest cover you can find, and leave the magazine in."

A moment later: "I'll come when I can. You can say to your captain that I think, as soon as possible, he should make an announcement to the passengers. People are getting over their shock. They could use some reassurance."

"Yes, sir." Cy Jordan looked down at the still unconscious figure of Gwen, his normally mournful, hollow-cheeked face accentuated by concern. "Is there a chance for her, Doc?"

"There's a chance, son, though I wouldn't say it was the best. A lot depends on her own strength."

"I always figured she had a lot of that."

"A pretty girl, wasn't she?" Amid the torn flesh, blood, and dirty, tousled hair, it was difficult to be sure.

"Very."

Compagno remained silent. Whatever happened, the girl on the floor would not be pretty any more—not without plastic surgery.

"I'll give the captain your message, sir." Looking a little sicker than before, Cy Jordan went forward to the flight deck.

Vernon Demerest's voice came calmly on the cabin p.a. system a few moments later.

"Ladies and gentlemen, this is Captain Demerest . . ." To overcome the roar of wind and engines, Cy Jordan had turned the volume control to "full." Each word rang clearly.

"You know we've had trouble—bad trouble. I won't attempt to minimize it. I won't make any jokes either, because up here on the flight deck we don't see anything that's funny, and I imagine you feel the same way. We've all come through an experience which none of us in the crew has ever

had before, and I hope will never have again. But we have come through. Now, we have the airplane under control, we're turned around, and expect to land at Lincoln International in about three quarters of an hour."

In the two passenger cabins, where first and tourist class now mingled without distinction, movement and conversation stopped. Eyes instinctively went to the overhead speakers as everyone within hearing strained to miss nothing of what was said.

"You know, of course, that the airplane is damaged. But it's also true that the damage could have been a whole lot worse."

On the flight deck, with the p.a. mike in hand, Vernon Demerest wondered how specific—and how honest—he should be. On his own regular flights he always kept captain-to-passengers announcements to the barest terse minimum. He disapproved of "long-playing captains" who bombarded their captive audience with assorted commentaries from a flight's beginning to its end. He sensed, though, that this time he should say more, and that passengers were entitled to be told the true situation.

"I won't conceal from you," Demerest said into the microphone, "that we have a few problems still ahead of us. Our landing will be heavy, and we're not sure how the damage we've suffered will affect it. I'm telling you this because right after this announcement the crew will start giving instructions on how to sit, and how to brace yourselves, just before we land. Another thing you'll be told is how to get out of the airplane in a hurry, if we need to, right after landing. If that should happen, please act calmly but quickly, and obey instructions given you by any member of the crew."

"Let me assure you that on the ground everything necessary is being done to help us." Remembering their need for runway three zero, Demerest hoped it was true. He also decided there was no point in going into detail about the problem of the jammed stabilizer; most passengers wouldn't understand it anyway. With a touch of lightness in his voice, he added, "In one way you're lucky tonight because instead of one experienced captain on the flight deck, it just so happens you have two—Captain Harris and myself. We're a couple of ancient pelicans with more years of flying than we sometimes like to think about—except right now when all that combined experience comes in mighty handy."

helping each other, along with Second Officer Jordan, who'll also be spending part of his time back with you. Please help us too. If you do, I promise you we'll come through this together—safely."

Demerest replaced the p.a. mike.

Without taking his eyes from the flight instruments, Anson Harris remarked, "That was pretty good. You should be in politics."

Demerest said sourly, "Nobody'd vote for me. Most times, people don't like plain talking and the truth." He was remembering bitterly the Board of Airport Commissioners meeting at Lincoln International where he urged curtailment of airport insurance vending. Plain speech there had proved disastrous. He wondered how the members of the Board, including his smooth, smug brother-in-law, would feel after learning about D. O. Guerrero's purchase of insurance and his malicious intention to destroy Flight Two. Probably, Demerest thought, they would be complacent as ever, except that now instead of saying *It will never happen*, they would say, *What occurred was exceptional; the odds are against it happening again*. Well, assuming Flight Two made it back safely, and whatever was said or wasn't, sure as hell he was going to create another big fight about airport insurance vending. The difference was: this time more people would listen. Tonight's near disaster, however it turned out, was certain to attract a lot of press attention; he would make the most of it. He would talk bluntly to reporters about flight insurance, about the Lincoln airport commissioners, and not least about his precious brother-in-law, Mel Bakersfeld. Trans America's public relations flacks would do their damndest, of course, to keep him incommunicado "in the interests of company policy." Just let them try!

The radio crackled alive. "Trans America Two, this is Cleveland Center. Lincoln advises runway three zero still temporarily out of use. They are attempting to clear obstruction before you arrive. Failing that, will land you on two five."

Harris's face went grim as Demerest acknowledged. Runway two five was two thousand feet shorter, as well as narrower, and at the moment with a bad crosswind. Using it would compound the hazards they already faced.

Demerest's expression clearly reflected his reaction to the message.

They were still being thrown about severely by the storm. Most of Harris's time was occupied by holding the aircraft reasonably steady.

Demerest swung around to the second officer. "Cy, go back with the passengers again, and take charge. See that the girls demonstrate the landing drill, and that everybody understands it. Then pick some key people who look reliable. Make sure they know where emergency exits are and how to use them. If we run out of runway, which'll be for sure if we use two five, everything may come apart in a hurry. If that happens we'll all try to make it back there and help, but there may not be time."

"Yes, sir." Once more, Jordan eased out of his flight engineer's seat.

Demerest, still anxious for news of Gwen, would have preferred to go himself, but at this stage neither he nor Harris could leave the flight deck.

As Cy Jordan left, Dr. Compagno arrived. It was now easier to move into and from the flight deck, since Jordan had moved the smashed entrance door to one side.

Milton Compagno introduced himself briskly to Vernon Demerest. "Captain, I have the report of injuries you asked for."

"We're grateful to you, Doctor. If you hadn't been here . . ."

Compagno waved a hand in dismissal. "Let's do all that later." He opened a leather-covered notebook where a slim gold pencil marked a page. It was characteristic that he had already obtained names, and recorded injuries and treatment. "Your stewardess, Miss Meighen, is the most badly hurt. She has multiple lacerations of the face and chest, with considerable bleeding. There is a compound fracture of the left arm and, of course, shock. Also, please notify whoever is making arrangements on the ground that an ophthalmic surgeon should be available immediately."

Vernon Demerest, his face paler than usual, had been steeling himself to copy the doctor's information onto the flight log clipboard. Now, with sudden shock, he stopped.

"An ophthalmic surgeon! You mean . . . her eyes?"

"I'm afraid so," Dr. Compagno said gravely. He corrected himself. "At least, her left eye has splinters, whether wood or metal I've no means of knowing. It will require a specialist

to decide if the retina is affected. The right eye, as far as can tell, is unharmed."

"Oh, God!" Feeling physically sick, Demerest put a hand to his face.

Dr. Compagno shook his head. "It's too early to draw conclusions. Modern ophthalmic surgery can do extraordinary things. But time will be important."

"We'll send all you've told us on company radio," Anson Harris assured him. "They'll have time to be ready."

"Then I'd better give you the rest."

Mechanically, Demerest wrote down the remainder of the doctor's report. Compared with Gwen's injuries, those of the other passengers were slight.

"I'd better get back," Dr. Compagno said. "To see if there's any change."

Demerest said abruptly, "Don't go."

The doctor stopped, his expression curious.

"Gwen . . . that is, Miss Meighen . . ." Demerest's voice sounded strained and awkward, even to himself. "She was . . . is . . . pregnant. Does it make any difference?"

He saw Anson Harris glance sideways in startled surprise.

The doctor answered, a shade defensively, "I had no means of knowing. The pregnancy can't be very far advanced."

"No," Demerest avoided the other man's eyes. "It isn't." A few minutes earlier he had resolved not to ask the question. Then he decided that he had to know.

Milton Compagno considered. "It will make no difference to her own ability to recover, of course. As to the child, the mother was not deprived of oxygen long enough to do harm . . . no one was. She has no abdominal injuries." He stopped, then went on fussily, "So there should be no effect. Providing Miss Meighen survives—and with prompt hospital treatment her chances are fair to good—the baby should be born normally."

Demerest nodded without speaking. Dr. Compagno, after a moment's hesitation, left.

Briefly, between the two captains, there was a silence. Anson Harris broke it. "Vernon, I'd like to rest before I make the landing. Will you fly for a while?"

Demerest nodded, his hands and feet moving automatically to the controls. He was grateful for the absence of questioning or comment about Gwen. Whatever Harris was thinking or wondering, he had the decency to keep it to himself.

Harris reached for the clipboard containing Dr. Compagno's information. "I'll send that." He switched radio receivers to call Trans America dispatch.

For Vernon Demerest the act of flying was a physical relief after the shock and emotion of what he had just heard. Possibly Harris had considered that, possibly not. Either way, it made sense that whoever was in command for the landing should conserve his energies.

As to the landing, hazardous as it was going to be, Anson Harris obviously assumed he would make it. Demerest—on the basis of Harris's performance so far—saw no reason why he should not.

Harris completed his radio call, then eased his seat rearward and allowed his body to rest.

Beside him, Vernon Demerest tried to concentrate solely on flying. He did not succeed. To a pilot of experience and skill, total concentration during level flight—even in difficult circumstances, as now—was neither usual nor necessary. Though he tried to banish or postpone them, thoughts of Gwen persisted.

Gwen . . . whose chance of remaining alive was "fair to good," who tonight had been bright and beautiful and full of promise, would never go to Naples now, as they had planned . . . Gwen, who an hour or two ago had told him in her clear, sweet English voice, *I happen to love you* . . . Gwen, whom he loved in return, despite himself, and why not face it?

With grief and anguish he visualized her—injured, unconscious, and carrying his child; the child he urged her to dispose of like an unwanted litter . . . She had replied with spirit, *I was wondering when you'd get around to it* . . . Later she had been troubled. *It's a gift . . . that's great and wonderful. Then suddenly, in our kind of situation you're faced with ending it all, of squandering what was given.*

But eventually, after his persuading, she conceded. *Well, I suppose in the end I'll do what's sensible. I'll have an abortion.*

There would be no abortion now. In the kind of hospital Gwen was going to, it would not be permitted unless in a direct choice between saving the mother or the unborn child. From what Dr. Compagno had said, there seemed no likelihood of that; and afterward it would be too late.

So if Gwen came through, the baby would be born. For he relieved or sorry? Vernon Demerest

He remembered something else, though, that Gwen had said. *The difference between you and me is that you've had a child . . . whatever happens there's always someone, somewhere that's you again.*

She had been speaking of the child whom he had never known, even by name; the girl child, born in the limbo of the Trans America 3-PPP arrangements, who had disappeared from sight immediately and forever. Tonight, under questioning, he admitted that sometimes he wondered about her. What he had not admitted was that he wondered, and remembered, more often than he cared to.

His unknown daughter was eleven years old; Demerest knew her birthday, though he tried not to remember it, but always did, wishing the same thing each year: that there was something he could do—even a simple thing like sending a greeting . . . He supposed it was because he and Sarah had never had a child (though both had wanted children) whose birthday he could share . . . At other times he asked himself questions to which he knew there could be no answers: Where was his daughter? What was she like? Was she happy? Sometimes he looked at children in the streets; if their ages seemed right, he speculated on whether, by merest chance . . . then chided himself for foolishness. Occasionally the thought haunted him that his daughter might be ill-treated, or need help which he had no knowledge or means to give . . . At the instinctive reminder, now, Vernon Demerest's hands tightened on the control yoke.

For the first time he realized: he could never endure the same uncertainty again. His own nature demanded positiveness. He could, and would, have gone through with the abortion because that was final, definite; moreover, nothing Anson Harris had said earlier on that subject had changed his mind. True, he might have doubts, or even sorrow, afterward. But he would *know*.

The overhead radio speaker cut abruptly through his thoughts. "Trans America Two, this is Cleveland Center. Turn left on heading two zero five. Begin descent, when ready, to six thousand. Advise when leaving ten."

Demerest's hand pulled back all four throttles to begin losing altitude. He reset the flight path indicator and eased into the turn.

"Trans America Two coming on course two zero five,"

Anson Harris was advising Cleveland. "We are leaving ten thousand now."

The buffeting increased as they descended, but with every minute they were nearer destination and the hope of safety. They were also nearing the air route boundary point where, at any moment, Cleveland would hand them over to Chicago Center. After that, there would be thirty minutes flying before entering the approach control of Lincoln International.

Harris said quietly, "Vernon, I guess you know how badly I feel about Gwen." He hesitated. "Whatever's between the two of you is none of my business, but if there's anything I can do as a friend . . ."

"There's nothing," Demerest said. He had no intention of unburdening himself to Anson Harris, who was a competent pilot, but still, in Demerest's eyes, an old maid.

Demerest regretted now that he had revealed as much as he did a few minutes ago, but emotion got the better of him—something which happened rarely. Now, he let his face resume a scowl, his shield against disclosing personal feelings.

"Passing through eight thousand feet," Anson Harris told air route control.

Demerest continued to hold the aircraft in a steady descent, on course. His eyes swept the flight instruments in consistent sequence.

He remembered something about the child—his child—who had been born eleven years ago. For weeks before the birth, he debated with himself whether he should confess his infidelity to Sarah, with the suggestion that they adopt the baby as their own. In the end, his courage had failed him. He dreaded his wife's shocked reaction; he feared that Sarah would never accept the child, whose presence she would regard as a permanent reproach.

Long after, and too late, he realized he had done Sarah in injustice. True, she would have been shocked and hurt just as she would be shocked and hurt now, if she learned about Gwen. But afterward, in a short time, Sarah's habit of coping would have taken over. For all Sarah's placidity and what Demerest thought of as her dullness, despite her suburban bourgeois activities—the curling club and amateur oil painting—his wife had a core of sane solidity. He supposed it was why they had stayed married; why, even now, he could not contemplate divorce.

Sarah would have worked something out. She would have made him squirm and suffer for a while, perhaps for a long time. But she would have agreed to the adoption, and the one who would not have suffered at all would have been the child. Sarah would have seen to that; she was that kind of person. He thought: if only . . .

Demerest said aloud, "Life's full of goddamned 'if onlys.'"

He leveled out at six thousand feet, advancing the throttles maintain speed. The jet whine rose in pitch.

Harris had been busy changing radio frequencies and—now they had passed the handoff point—reporting to Chicago Center. He asked, "Did you say something?" Demerest shook his head.

The storm's turbulence was as bad as ever, the aircraft still being thrown around.

"Trans America Two, we have you in radar contact," a new voice from Chicago Center rasped.

Harris was still attending to communications.

Vernon Demerest reasoned: So far as Gwen was concerned, he might just as well make a decision now.

All right, he decided; he would face Sarah's tears and denunciations, and perhaps her anger, but he would tell her about Gwen.

He would admit his responsibility for Gwen's pregnancy. At home, the resulting hysteria might last several days, and the aftereffects for weeks or even months, during which time he would suffer mightily. But when the worst was over they could work something out. Strangely—and he supposed it showed his confidence in Sarah—he had not the slightest doubt they would.

He had no idea what they might do, and a good deal could depend on Gwen. Despite what the doctor had just said about the seriousness of Gwen's injuries, Demerest had a conviction she would come through. Gwen had spunk and courage; even unconsciously she would fight to live, and eventually, whatever impairment she suffered, would adjust to it. She would also have her own ideas about the baby. She might not give it up easily or at all. Gwen was not one to be pushed around, or to be told what to do. She did her own thinking.

The result might be that he would have two women on his hands—plus child—instead of one. *That* would take some working out!

It would also pose the question: just how far would Sarah go?

God!—what a mess.

But now that his own first decision was taken, he had the conviction that something good might result. He reflected grimly: For all it was going to cost him, in anguish and hard cash, it better had.

The altimeter showed they were maintaining six thousand feet.

There would be the child, of course. Already he was beginning to think of that part in a new and different way. Naturally, he wouldn't let himself get sickly sentimental, the way some people—Anson Harris, for example—were about children; but it would be his child, after all. The experience would certainly be new.

What was it Gwen had said in the car on their way to the airport tonight? . . . *a little Vernon Demerest inside me. If we had a boy we could call him Vernon Demerest, Junior, the way Americans do.*

Maybe it wasn't such a bad idea. He chuckled.

Harris glanced sideways. "What are you laughing at?"

Demerest exploded. "I'm not laughing! Why the hell would I laugh? What is there for any of us to laugh about?"

Harris shrugged, "I thought I heard you."

"That's the second time you've heard things that didn't happen. After this check ride I suggest you have an ear checkup."

"There's no need to be unpleasant."

"Isn't there? *Isn't there?*" Demerest came angrily alert. "Maybe what this whole situation needs is for someone to get unpleasant."

"If that's true," Harris said, "there's no one better qualified than you."

"Then when you're through with damnfool questions, start flying again, and let me talk to those duffers on the ground."

Anson Harris slid his seat forward. "If you want to, why not?" He nodded. "I have it."

Relinquishing the controls, Demerest reached for the radio mike. He felt better, stronger, for a decision taken. Now he would contend with more immediate things. He let his voice grate harshly. "Chicago Center, this is Captain Demerest of Trans America Two. Are you still listening down there, or have you taken sleeping pills and quit?"

402 AIRPORT

"This is Chicago Center, Captain. We're listening, and no one's quit." The controller's voice held a note of reproach; Demerest ignored it.

"Then why in blazes aren't we getting action? This flight is in serious trouble. We need help."

"Stand by, please." There was a pause, then a new voice. "This is Chicago Center supervisor. Captain, Trans America Two, I heard your last transmission. Please understand we're doing everything we can. Before you came into our area we had a dozen people working, clearing other traffic. They're still doing it. We're giving you priority, a clear radio frequency, and a straight-in course for Lincoln."

Demerest barked, "It isn't enough." He paused, holding down the mike button, then continued. "Chicago supervisor, listen carefully. A straight-in course to Lincoln is no good if it ends on runway two five, or any runway except three zero. Don't tell me three zero's out of use; I've heard it already, and I know why. Now, write this down, and see that Lincoln understands it too: This airplane is heavily loaded; we'll be landing very fast. As well as that, we've structural damage including unserviceable stabilizer trim and doubtful rudder control. If we're brought in on two five, there'll be a broken airplane and dead people before the next hour is over. So call Lincoln, mister, and turn the screws. Tell them I don't care how they do it—they can blow apart what's blocking three zero if they have to—but we need that runway. Do you understand?"

"Yes, Trans America Two, we understand very well." The supervisor's voice was unruffled, but a shade more human than before. "Your message is being passed to Lincoln now."

"Good." Demerest held the transmit button down again. He had another message. This one is to Mel Bakersfeld, airport general manager at Lincoln. Give him the previous message, then add this—personal from his brother-in-law: "You helped make this trouble, you bastard, by not listening to me about airport flight insurance. Now you owe it to me and all others on this flight to climb off your penguin's butt and get that runway clear."

This time the supervisor's voice was doubtful. "Trans America Two, we've copied your message. Captain, are you sure you want us to use those words?"

"Chicago Center," Demerest's voice slammed back, "you're damn right you'll use those words! I'm ordering you to send that message—fast, and loud, and clear."

13

On ground control radio in his speeding car, Mel Bakersfeld could hear airport emergency vehicles being summoned and positioned.

"Ground control to city twenty-five."

Twenty-five was the call sign of the airport fire chief.

"This is city twenty-five rolling. Go ahead ground."

"Further information. Category two emergency in approximately thirty-five minutes. The flight in question is disabled and landing on runway three zero, if runway open. If not open, will use runway two five."

Whenever they could, airport controllers avoided naming, on radio, an airline involved in any accident, or a potential one. The phrase "the flight in question" was used as a cover. Airlines were touchy about such things, taking the view that the fewer times their name was repeated in that kind of context, the better.

Just the same, Mel was aware, what had happened tonight would get plenty of publicity, most likely worldwide.

"City twenty-five to ground control. Is the pilot requesting foam on runway?"

"No foam. Repeat, no foam."

The absence of foam meant that the aircraft had serviceable landing gear and would not require a belly landing.

All emergency vehicles, Mel knew—pumpers, salvage trucks, and ambulances—would be following the fire chief, who also had a separate radio channel to communicate with them individually. When an emergency was notified, no one waited. They observed the principle: better to be ready too soon than too late. Emergency crews would now take up position between the two runways, ready to move to either as necessary. The procedure was no improvisation. Every move for situations like this was detailed in an airport emergency master plan.

When there was a break in transmissions, Mel thumbed on his own radio mike.

"Ground control from mobile one."

"Mobile one, go ahead."

"Has Joe Patroni, with stalled aircraft on runway three zero, been advised of new emergency situation?"

"Affirmative. We are in radio touch."

"What is Patroni's report on progress?"

"He expects to move the obstructing aircraft in twenty minutes."

"Is he certain?"

"Negative."

Mel Bakersfeld waited before transmitting again. He was heading across the airfield for the second time tonight, one hand on the wheel, the other on the microphone—driving as fast as he dared in the continued blowing snow and restricted visibility. Taxi and runway lights, guidelines in the dark, flashed by. Beside him on the car's front seat were Tanya Livingston and the *Tribune* reporter, Tomlinson.

A few minutes ago, when Tanya had handed Mel her note about the explosion aboard Flight Two, and the flight's attempt to reach Lincoln International, Mel had broken free instantly from the crowd of Meadowood residents. With Tanya beside him, he headed for the elevators which would take him to the basement garage two floors below, and his official airport car. Mel's place now was on runway three zero, if necessary to take charge. Shouldering his way through the crowd in the main concourse, he had caught sight of the *Tribune* reporter and said tersely, "Come with me." He owed Tomlinson a favor in return for the reporter's tip-off about Elliott Freemantle—both the legal contract form and the lawyer's mendacious statements later, which Mel had been able to repudiate. When Tomlinson hesitated, Mel snapped. "I haven't time to waste. But I'm giving you a chance you may be sorry for not taking." Without further questioning, Tomlinson fell in step beside him.

Now, as they drove, Mel accelerating ahead of taxiing aircraft where he could, Tanya repeated the substance of the news about Flight Two.

"Let me get this straight," Tomlinson said. "There's only one runway long enough, and facing the right direction?"

Mel said grimly, "That's the way it is. Even though there should be two." He was remembering bitterly the proposals

he had made, over three successive years, for an additional runway to parallel three zero. The airport needed it. Traffic volume and aircraft safety cried out for implementation of Mel's report, particularly since the runway would take two years to build. But other influences proved stronger. Money had not been found, the new runway had not been built. Nor had construction—despite Mel's further pleas—yet been approved.

With a good many projects, Mel could swing the Board of Airport Commissioners his way. In the case of the proposed new runway, he had canvassed them individually and received promises of support, but later the promises were withdrawn. Theoretically, airport commissioners were independent of political pressure; in fact, they owed their appointments to the mayor and, in most cases, were political partisans themselves. If pressure was put on the mayor to delay an airport bond issue because of other projects, similarly financed and more likely to swing votes, the pressure penetrated through. In the case of the proposed new runway it not only penetrated, but three times had proved effective. Ironically, as Mel remembered earlier tonight, triple-decking of the airport's public parking lots—less necessary, but more visible—had *not* been held up.

Briefly, and in plain words, which until now he had reserved for private sessions, Mel described the situation, including its political overtones.

"I'd like to use all that as coming from you." Tomlinson's voice held the controlled excitement of a reporter who knew he was on to a good story. "May I?"

There would be the devil to pay after it appeared in print, Mel realized; he could imagine the indignant telephone calls from City Hall on Monday morning. But someone should say it. The public ought to know how serious the situation was.

"Go ahead," Mel said. "I guess I'm in a quoting mood."

"That's what I thought." From the far side of the car the reporter regarded Mel quizzically. "If you don't mind my saying so, you've been in great form tonight. Just now, and with the lawyer and those Meadowood people. More like your old self. I haven't heard you speak out like that in a long while."

Mel kept his eyes on the taxiway ahead, waiting to pass an Eastern DC-8, which was turning left. But he was think-

"Mobile one—Mr. Bakersfeld, there is an addition to previous message, personal to you, from your brother-in-law. Can you reach a phone?"

"Negative," Mel said. "Read it now, please."

"Mobile one"—he sensed the controller hesitate—"the language is very personal."

The controller was aware—as Mel was—that many ears around the airport would be listening.

"Does it concern the present situation?"

"Affirmative."

"Then read it."

"Yes, sir. Message begins. 'You helped make this trouble, you bastard, by not listening to me about airport flight insurance . . .'"

Mel's mouth tightened, but he waited to the end, then acknowledged noncommittally, "Roger, out." He was sure at Vernon had enjoyed sending the message, as much as anything could be enjoyed aboard Flight Two at present, and could be even more pleased to learn the way it was received.

The extra message was unnecessary, though. Mel had already made his decision on the basis of the first.

His car was now speeding down runway three zero. The role of floodlights and vehicles surrounding the mired éreo-Mexican 707 jet were coming into sight. Mel noted approvingly that the runway was only lightly snow-covered. Despite the blockage of one portion, the remainder had been apt plowed.

He switched his radio to the frequency of airport maintenance.

"Mobile one to Snow Desk."

"This is Snow Desk." Danny Farrow's voice sounded tired, which was not surprising. "Go ahead."

"Danny," Mel said, "break the Conga Line. Send the Osh plows and heavy graders across to runway three zero. They're to head for where the stuck airplane is, and await instructions. Get them started now, then call me back."

"Roger, wilco." Danny seemed about to add a question, then apparently changed his mind. A moment later, on the same frequency, the occupants of the car heard him issue orders to the Conga Line convoy leader.

The *Tribune* reporter leaned forward around Tanya.

"I'm still fitting pieces together," Tomlinson said. "That bit

about flight insurance . . . Your brother-in-law's an Air Line Pilots Association wheel, isn't he?"

"Yes." Mel halted the car on the runway, a few feet short of the circle of lights around the big, stalled aircraft. There was plenty of action, he could see; beneath the aircraft fuselage, and on both sides, men were digging feverishly. The stocky form of Joe Patroni was visible directing activities. In a moment Mel would join him, after the return radio call from Danny Farrow at the Snow Desk.

The reporter said thoughtfully, "I think I heard something awhile back. Didn't your brother-in-law make a big play to cancel insurance vending here—the way ALPA wants to—and you turned him down?"

"I didn't turn him down. The airport board did, though agreed with them."

"If it isn't an unfair question, has what's happened tonight made you change your mind?"

Tanya protested, "Surely this isn't the time . . ."

"I'll answer that," Mel said. "I haven't changed my mind at least not yet. But I'm thinking about it."

Mel reasoned: the time for a change of heart about flight insurance—if there was to be one—was not now, in the height of emotion and the wake of tragedy. In a day or two what had occurred tonight would be seen in better perspective. Mel's own decision—whether to urge the airport board to revise its policy, or not—should be made then. Meanwhile, no one could deny that tonight's events added strength to Vernon Demerest's—and the Air Line Pilots Association—arguments.

Possibly, Mel supposed, a compromise might be worked out. An ALPA spokesman once confided to him that the pilots did not expect their anti-airport insurance campaign to be won, either outright or quickly; success would take years and "would have to be cut like bologna—a slice at a time." One slice at Lincoln International might be to prohibit use of non-supervised insurance vending machines, as some airports had already done. One state—Colorado—had outlawed the machines by Legislative Act. Other states, Mel knew, were considering similar legislation, though there was nothing to stop airports, meanwhile, from acting on their own.

It was the insurance vending machine system which Mel liked least, even though D. O. Guerrero's huge insurance policy tonight had not been bought that way. Then, if on

the-counter sales remained—for a few more years until public opinion could be molded—there would have to be more safeguards . . .

Even though Mel had resolved not to make a firm decision, it was obvious to himself which way his reasoning was going.

The radio, still tuned to airport maintenance frequency, had been busy with calls between vehicles. Now it announced, "Snow Desk to mobile one."

Mel responded, "Go ahead, Danny."

"Four plows and three graders, with convoy leader, are on their way to runway three zero as instructed. What orders, please?"

Mel chose his words carefully, aware that somewhere in an electronic maze beneath the control tower they were being recorded on tape. Later he might have to justify them. He also wanted to be sure there was no misunderstanding.

"Mobile one to Snow Desk. All plows and graders, under direction of convoy leader, will stand by near Aéreo-Mexican aircraft which is blocking runway three zero. Vehicles are not, repeat not, initially to obstruct the aircraft, which in a few minutes will attempt to move under its own power. But if that attempt fails, plows and graders will be ordered in to push the aircraft sideways, and to clear the runway. This will be done at any cost, and with all speed. Runway three zero must be open for use in approximately thirty minutes, by which time the obstructing aircraft and all vehicles must be clear. I will coordinate with air traffic control to decide at what time the plows will be ordered in, if necessary. Acknowledge, and confirm that these instructions are understood."

Inside the car the reporter, Tomlinson, whistled softly. Tanya turned toward Mel, her eyes searching his face.

On radio there were several seconds' silence, then Danny Farrow's voice. "I guess I understand. But I'd better be sure." He repeated the gist of the message, and Mel could imagine Danny sweating again, as he had been earlier.

"Roger," Mel acknowledged. "But be clear about one thing. If those plows and graders go in, I'll give the order; no one else."

"It's clear," Danny radioed. "And better you than me. Mel, I guess you've figured what that equipment of ours'll do to a 707."

"It'll move it," Mel said tersely. "Right now that's the important thing." There was, Mel knew, other motorized

equipment in Airport Maintenance, capable of the same kind of brute force clearing job; but using the Conga Line units, already on the runways, would be surer and faster. He signed off, and replaced the radio mike.

Tomlinson said incredulously, "Move it! A six-million dollar airplane shoved sideways by snowplows! My God, you'll tear it to pieces! And afterward, the owners and insurers'll do the same to you."

"I wouldn't be surprised," Mel said. "Of course, a lot depends on your point of view. If the owners and insurers were on that other flight coming in, they might be cheering."

"Well," the reporter conceded, "I'll grant you there are some decisions take a lot of guts."

Tanya's hand reached down beside her and found Mel's. She said softly, emotion in her voice, "I'm cheering—for what you're doing now. Whatever happens after, I'll remember."

The plows and graders which Mel had summoned were coming into sight, traveling fast down the runway, roof beacons flashing.

"It may never happen." Mel squeezed Tanya's hand before releasing it, then opened the car door. "We've twenty minutes to hope it won't."

When Mel Bakersfeld approached him, Joe Patroni was warming his feet in an effort to be warm; the effort was largely unsuccessful despite the fleece-lined boots and heavy parka the TWA maintenance chief was wearing. Apart from

brief time Patroni had spent on the aircraft flight deck when the Aéreo-Mexican captain and first officer departed, he had been continuously out in the storm since his arrival at the scene more than three hours ago. As well as being exhausted and physically tired from his various exertions of the day and night, his failure to move the stranded jet despite two attempts so far, had made his temper ready to erupt.

It almost did, at the news of Mel's intention.

With anyone else, Joe Patroni would have stormed and threatened. Because Mel was a close friend, Patroni removed the lighted cigar he had been chewing, and eyed Mel unbelievably. "Shove an undamaged airplane with snowplows! Get you out of your mind?"

"No," Mel said. "I'm out of runways."

Mel felt a momentary depression at the thought that no

he in authority, other than himself, seemed to understand the urgency of clearing three zero, at any cost. Obviously, if he went ahead as he intended, there would be few who would support his action afterward. On the other hand, Mel had at the least doubt there would be plenty of people tomorrow with hindsight—including Aéreo-Mexican officials—who could assert he could have done this or that, or that Flight Two should have landed on runway two five after all. Obviously his decision was to be a lonely one. It did not change Mel's conviction that it should be made.

At the sight of the assembled plows and graders, now deployed in line on the runway, to their right, Patroni dropped his cigar altogether. As he produced another he growled, "I'll save you from your own insanity. Keep those Dinky boys of yours out of my hair and away from this airplane. In fifteen minutes, maybe less, I'll drive it out."

Mel shouted to make himself heard above the wind and roaring engines of vehicles around them. "Joe, let's be clear about one thing. When the tower tells us we're running out of time, that's it; there'll be no argument. People's lives are involved on the flight that's coming in. If you've engines running, they're to be shut down. At the same time all equipment and the men must move clear immediately. Make sure I advance that all your people understand. The plows will move on my order. If and when they do, they won't waste me."

Patroni nodded gloomily. Despite his outburst, Mel thought, the maintenance chief's usual cocky self-assurance seemed abated.

Mel returned to his car. Tanya and the reporter, huddled in their coats, had been standing outside, watching the work digging around the aircraft. They got into the car with him, grateful for the warmth inside.

Once more, Mel called ground control on radio, this time asking for the tower watch chief. After a brief pause, the tower chief's voice came on the air.

In a few words Mel explained his intention. What he sought from air traffic control now was an estimate of how long he could wait before ordering the plows and graders to move. Once they did, it would take only minutes to have the obstructing aircraft clear.

"The way it looks now," the tower chief said, "the flight question will be here sooner than we thought. Chicago

Center expects to hand over to our approach control in twelve minutes from now. After that we'll be controlling the flight for eight to ten minutes before landing, which would make time of touchdown, at latest, 0128."

Mel checked his watch in the dim light from the dash. It showed 1:01 A.M.

"A choice of which runway to use," the tower chief said, "will have to be made no later than five minutes before landing. After that, they'll be committed; we can't turn them."

So what it meant, Mel calculated, was that his own final decision must be made in another seventeen minutes, perhaps less, depending on the handover time from Chicago Center to Lincoln approach control. There was even less time remaining than he had told Joe Patroni.

Mel found he, too, was beginning to sweat.

Should he warn Patroni again, informing him of the reduced time? Mel decided not. The maintenance chief was busy directing operations at the fastest pace he could. Nothing would be gained by harassing him further.

"Mobile one to ground control," Mel radioed. "I'll need you kept informed of exact status of the approaching flight. Do we hold this frequency clear?"

"Affirmative," the tower chief said. "We've already moved other traffic to another frequency. We'll keep you informed."

Mel acknowledged and signed off.

Beside him, Tanya asked, "What happens now?"

"We wait." Mel checked his watch again.

One minute went by. Two.

Outside they could see men working, still digging feverishly at the front and on each side of the mired aircraft. With a flash of headlights, another truck arrived; men jumped down from its tailgate and hastened to join the others. Joe Patroni's bulky figure was moving constantly, instructing and exhorting.

The plows and graders were still in line, waiting. In a way, they thought, like vultures.

The reporter, Tomlinson, broke the silence inside the car. He was just thinking. When I was a kid, which isn't all that long ago, most of this place was fields. In summer there were alfalfa and corn and barley. There was a grass airfield; small; nobody thought it would amount to much. If anyone traveled here, they used the airport in the city."

"That's aviation," Tanya said. She felt a momentary relief being able to think and talk of something other than what they were waiting for. She went on, "Somebody told me once that working in aviation makes a lifetime seem longer because everything changes so often and so fast."

Tomlinson objected, "Not everything's fast. With airports, changes aren't fast enough. Isn't it true, Mr. Bakersfeld, that within three to four years there'll be chaos?"

"Chaos is always relative," Mel said; the focus of his mind was still on the scene he could see through the car windshield. "In a good many ways we manage to live with it."

"Aren't you dodging the question?"

"Yes," he conceded. "I suppose I am."

It was scarcely surprising, Mel thought. He was less concerned with aviation philosophy at this moment than with the mediacy of what was happening outside. But he sensed Tanya's need for a lessening of tension, even if illusory; his awareness of her feelings was part of the empathy they seemed increasingly to share. He reminded himself, too, that this was a Trans America flight they were waiting for, and which might land safely or might not. Tanya was a part of Trans America, had helped with the flight's departure. In a real sense, of the three of them she had the most direct involvement.

With an effort he concentrated on what Tomlinson had said.

"It's always been true," Mel declared, "that in aviation, progress in the air has been ahead of progress on the ground. We sometimes think we'll catch up; in the mid-1960s we almost did; but by and large we never do. The best we can manage, it seems, is not to lag too far behind."

The reporter persisted, "What *should* we do about airports? What *can* we do?"

"We can think more freely, with more imagination, for one thing. We should get rid of the railway station mind."

"You believe we still have it?"

Mel nodded. "Unfortunately, in a good many places. All the early airports were imitation railway stations because designers had to draw on experience from somewhere, and broad experience was all they had. Afterward, the habit remained. It's the reason, nowadays, we have so many 'straight line' airports, where terminals stretch on and on and passengers must walk for miles."

Tomlinson asked, "Isn't some of that changing?"

"Slowly, and in just a few places." As always, despite the pressures of the moment, Mel was warming to his theme. "A few airports are being built as circles—like doughnuts; with car parking inside, instead of somewhere out beyond; with minimum distances for people to walk; with aids like high-speed horizontal elevators; with airplanes brought close to passengers instead of the other way around. What it means is that airports are finally being thought of as special and distinct; also as units instead of separate components. Creative ideas, even outlandish ones, are being listened to. Los Angeles is proposing a big, offshore seadrome; Chicago, a man-made airport island in Lake Michigan; nobody's scoffing. American Airlines has a plan for a giant hydraulic lift to stack airplanes one above the other for loading and unloading. But the changes are slow, they're not coordinated; we build airports like an unimaginative, patchwork quilt. It's as if phone subscribers designed and made their own telephones, then plugged them into a world-wide system."

The radio cut abruptly across Mel's words. "Ground control to mobile one and city twenty-five. Chicago Center now estimates handoff of the flight in question to Lincoln approach control will be 0117."

Mel's watch showed 1:06 A.M. The message meant that Flight Two was already a minute earlier than the tower chief had forecast. A minute less for Joe Patroni to work; only eleven minutes to Mel's own decision.

"Mobile one, is there any change in the status of runway three zero?"

"Negative; no change."

Mel wondered: was he cutting things too fine? He was tempted to direct the snowplows and graders to move now, then restrained himself. Responsibility was a two-way street, especially when it came to ordering the near-destruction of a six-million dollar aircraft on the ground. There was still a chance that Joe Patroni might make it, though with every second the possibility was lessening. In front of the stalled 707, Mel could see, some of the floodlights and other equipment were being moved clear. But the aircraft's engines had not yet been started.

"Those creative people," Tomlinson queried, "the ones you were talking about. Who are they?"

"Look!" Tanya cried out. "They're starting the engines."
The reporter's head came up; Mel felt his own excitement sharpen.

Behind number three engine of the Aéreo-Mexican 707, a puff of white-gray smoke appeared. Briefly it intensified, then whirled away as the engine fired and held. Now snow was streaming rearward in the jet blast.

A second puff of smoke appeared behind number four engine, a moment later to be whisked away, snow following.

"Ground control to mobile one and city twenty-five." Within the car the radio voice was so unexpected that Mel felt Tanya give a startled jump beside him. "Chicago Center advises revised handoff time of the flight in question will be 0116 . . . seven minutes from now."

Flight Two, Mel realized, was still coming in faster than expected. It meant they had lost another minute.

Again Mel held his watch near the light of the dash.

On the soft ground near the opposite side of the runway from their car, Patroni now had number two engine started. Number one followed. Mel said softly, "They could still make it." Then he remembered that all engines had been started twice before tonight, and both attempts to blast the stuck airplane free had failed.

In front of the mired 707 a solitary figure with flashlight signal wands had moved out ahead to where he could be seen from the aircraft flight deck. The man with the wands was holding them above his head, indicating "all clear." Mel could hear and feel the jet engines' thrum, but sensed they had not yet been advanced in power.

Six minutes left. *Why hadn't Patroni opened up?*

Tanya said tensely, "I don't think I can bear the waiting."

The reporter shifted in his seat. "I'm sweating too."

Joe Patroni was opening up! This was it! Mel could hear and feel the greater all-encompassing roar of engines. Behind the stalled Aéreo-Mexican jet, great gusts of snow were blowing wildly into the darkness beyond the runway lights.

"Mobile one," the radio demanded sharply, "this is ground control. Is there any change in status of runway three zero?"

Patroni, Mel calculated by his watch, had three minutes left.

"The airplane's still stuck." Tanya was peering intently through the car windshield. "They're using all the engines, but it isn't moving."

be in both at once. On one level he was directing east arrivals traffic—at the moment, without problems. On the other, his thoughts were personal and introspective. It was not a condition which could last, but perhaps, Keith thought, his mind was like a light bulb about to fail and, for its last few minutes, burning brightest.

The personal side of his thoughts was dispassionate now, and calmer than before; perhaps the session with Mel had achieved that, if nothing more. All things seemed ordained and settled. Keith's duty shift would end; he would leave this place; soon after, all waiting and all anguish would be over. He had the conviction that his own life and others' were already severed; he no longer belonged to Natalie or Mel, or Brian and Theo . . . or they to him. He belonged to the already dead—to the Redferns who had died together in the wreck of their Beech Bonanza; to little Valerie . . . her family. *That was it!* Why had he never thought of it that way before; realized that his own death was a debt he owed the Redferns? With continued dispassion, Keith wondered if he were insane; people who chose suicide were said to be, but either way it made no difference. His choice was between torment and peace; and before the light of morning, peace would come. Once more, as it had intermittently in the past few hours, his hand went into his pocket, fingering the key to room 224 of the O'Hagan Inn.

All the while, on the other mental level, and with traces of his old flair, he coped with east arrivals.

Awareness of the crisis with Trans America Flight Two came to Keith gradually.

Lincoln air traffic control had been advised of Flight Two's intention to return there—almost an hour ago, and seconds after Captain Anson Harris's decision was made known. Word had come by "hot line" telephone directly from Chicago Center supervisor to the tower watch chief, after similar notification through Cleveland and Toronto centers. Initially there had been little to do at Lincoln beyond advising the airport management, through the Snow Desk, of the flight's request for runway three zero.

Later, when Flight Two had been taken over from Cleveland, by Chicago Center, more specific preparations were begun.

Wayne Tevis, the radar supervisor, was alerted by the tower chief, who went personally to the radar room to inform

Tevis of Flight Two's condition, its estimated arrival time, and the doubt about which runway—two five or three zero—was to be used for landing.

At the same time, ground control was notifying airport emergency services to stand by and, shortly after, to move with their vehicles onto the airfield.

A ground controller talked by radio telephone with Joe Patroni to check that Patroni had been advised of the urgent need for runway three zero. He had.

Contact was then established, on a reserve radio frequency, between the control tower and the flight deck of the Aéreo-Mexican jet which blocked the runway. The setup was to ensure that when Patroni was at the aircraft's controls, there could be instant two-way communication, if needed.

In the radar room, when he had listened to the tower chief's news, Wayne Tevis's initial reaction was to glance at Keith. Unless duties were changed around, it would be Keith, in charge of east arrivals, who would accept Flight Two from Chicago Center, and monitor the flight in.

Tevis asked the tower chief quietly, "Should we take Keith off; put someone else on?"

The older man hesitated. He remembered the earlier emergency tonight involving the Air Force KC-135. He had removed Keith from duty then, on a pretext, and afterward wondered if he had been too hasty. When a man was teeter-tottering between self-assurance and the loss of it, it was easy to send the scales the wrong way without intending to. The tower chief had an uneasy feeling, too, of having blundered into something private between Keith and Mel Bakersfeld when the two of them were talking earlier in the corridor outside. He could have left them alone for a few minutes longer, but hadn't.

The tower watch chief was tired himself, not only from the trying shift tonight, but from others which preceded it. He remembered reading somewhere recently that new air traffic systems, being readied for the mid-1970s, would halve controllers' work loads, thereby reducing occupational fatigue and nervous breakdowns. The tower chief remained skeptical. He doubted if, in air traffic control, pressures would ever lighten; if they eased in one way, he thought, they would increase in another. It made him sympathize with those who, like Keith—still gaunt, pale, strained—had proved victims of the system.

Still in an undertone, Wayne Tevis repeated, "Do I take him off, or not?"

The tower chief shook his head. Low-voiced, he answered, "Let's not push it. Keep Keith on, but stay close."

It was then that Keith, observing the two with heads together, guessed that something critical was coming up. He was, after all, an old hand, familiar with signals of impending trouble.

Instinct told him, too, that the supervisors' conversation was, in part, about himself. He could understand why. Keith had no doubt he would be relieved from duty in a few minutes from now, or shifted to a less vital radar position. He found himself not caring.

It was a surprise when Tevis—without shuffling duties—began warning all watch positions of the expected arrival of Trans America Two, in distress, and its priority handling.

Departure control was cautioned: Route all departures well clear of the flight's anticipated route in.

To Keith, Tevis expounded the runway problem—the uncertainty as to which runway was to be used, and the need to postpone a decision until the last possible moment.

"You work out your own plan, buddy boy," Tevis instructed in his nasal Texas drawl. "And after the handover, stay with it. We'll take everything else off your hands."

At first, Keith nodded agreement, no more perturbed than he had been before. Automatically, he began to calculate the flight pattern he would use. Such plans were always worked out mentally. There was never time to commit them to paper; besides, the need for improvisation usually turned up.

As soon as he received the flight from Chicago Center, Keith reasoned, he would head it generally toward runway three zero, but with sufficient leeway to swing the aircraft left—though without drastic turns at low altitude—if runway two five was forced on them as the final choice.

He calculated: He would have the aircraft under approach control for approximately ten minutes. Tevis had already advised him that not until the last five, probably, would they know for sure about the runway. It was slicing things fine, and there would be sweating in the radar room, as well as in the air. But it could be managed—just. Once more, in his mind, Keith went over the planned flight path and compass headings.

By then, more definite reports had begun to filter, unoffi-

cially, through the tower. Controllers passed information to each other as work gaps permitted . . . The flight had had a mid-air explosion. It was limping in with structural damage and injured people . . . Control of the airplane was in doubt. The pilots needed the longest runway—which might or might not be available . . . Captain Demerest's warning was repeated: . . . *on two five a broken airplane and dead people* . . . The captain had sent a savage message to the airport manager. Now, the manager was out on three zero, trying to get the runway cleared . . . The time available was shortening.

Even among the controllers, to whom tension was as commonplace as traffic, there was now a shared nervous anxiety.

Keith's radar handoff man, seated alongside, passed on the news which came to him in snatches. As he did, Keith's awareness and apprehension grew. *He didn't want this, or any part of it!* There was nothing he sought to prove, or could; nothing he might retrieve, even if he handled the situation well. And if he didn't, if he mishandled it, he might send a planeload of people to their deaths, *as he had done once before.*

Across the radar room, on a direct line, Wayne Tevis took a telephone call from the tower watch chief. A few minutes ago the chief had gone one floor above, into the tower cab, to remain beside the ground controller.

Hanging up, Tevis propelled his chair alongside Keith. "The old man just had word from center. Trans America Two—three minutes from handoff."

The supervisor moved on to departure control, checking that outward traffic was being routed clear of the approaching flight.

The man on Keith's left reported that out on the airfield they were still trying frantically to shift the stranded jet blocking runway three zero. They had the engines running, but the airplane wouldn't move. Keith's brother (the handoff man said) had taken charge, and if the airplane wouldn't move on its own, was going to smash it to pieces to clear the runway. But everybody was asking: was there time?

If Mel thought so, Keith reasoned, there probably was. Mel coped, he managed things; he always had. Keith couldn't cope—at least not always, and never in the same way as Mel. It was the difference between them.

Almost two minutes had gone by.

Where in hell . . .

Why wouldn't Tevis turn?

Keith seethed with sudden rage. *Damn Tevis! Damn air traffic controll! Damn his dead father, Wild Blue Bakersfeld, who led his sons into a vocation Keith hadn't wanted to begin with! Damn Mel, with his infuriating self-sufficient competencel! Damn here and now! Damn everything! . . .*

The handoff man was looking at Keith curiously. At any moment Trans America Two would call again. Keith knew that he was trapped. Wondering if his voice would work, he keyed his mike.

"Trans America Two," Keith said, "this is Lincoln approach control. Sorry about the delay. We're still hoping for runway three zero; we shall know in three to five minutes."

A growled acknowledgment, "Roger, Lincoln. Keep us informed."

Keith was concentrating now; the extra level of his mind had closed. He forgot Tevis, his father, Mel, himself. All else was excluded but the problem of Flight Two.

He radioed clearly and quietly, "Trans America Two, you are now twenty-five miles east of the outer marker. Begin descent at your discretion. Start a right turn to heading two six zero . . ."

One floor above Keith, in the glass-walled tower cab, the ground controller had advised Mel Bakersfeld that handoff from Chicago Center had occurred.

Mel radioed back, "Snowplows and graders have been ordered to move, and clear the Aéreo-Mexican aircraft from the runway. Instruct Patroni to shut down all engines immediately. Tell him—if he can, get clear himself; if not, hold on tight. Stand by for advice when runway is clear."

On a second frequency, the tower chief was already informing Joe Patroni.

15

Even before it happened, Joe Patroni knew he was running out of time.

He had deliberately not started the engines of the Aéreo-Mexican 707 until the latest possible moment, wanting the

work of clearing under and around the aircraft to continue as long as it could.

When he realized that he could wait no longer, Patroni made a final inspection. What he saw gave him grave misgivings.

The landing gear was still not as clear from surrounding earth, mud, and snow as it should be. Nor were the trenches, inclining upward from the present level of the main wheels to the hard surface of the nearby taxiway, as wide or deep as he had wanted. Another fifteen minutes would have done it.

Patroni knew he didn't have the time.

Reluctantly he ascended the boarding ramp, to make his second attempt at moving the mired aircraft, now with himself at the controls.

He shouted to Ingram, the Aéreo-Mexican foreman, "Get everybody clear! We're starting up."

From under the aircraft, figures began to move out.

Snow was still falling, but more lightly than for several hours.

Joe Patroni called again from the boarding ramp. "I need somebody with me on the flight deck, but let's keep the weight down. Send me a skinny guy who's cockpit qualified."

He let himself into the aircraft's forward door.

Inside, through the flight deck windows, Patroni could see Mel Bakersfeld's airport car, its bright yellow coloring reflected through the darkness. The car was parked on the runway, to the left. Near it was the line of snowplows and graders—a reminder, if he needed one, that he had only a few minutes more.

The maintenance chief had reacted with shocked disbelief when Mel announced his plan to shove the Aéreo-Mexican aircraft clear of runway three zero by force, if necessary. The reaction was natural, but was not through indifference to the safety of those aboard Trans America Flight Two. Joe Patroni lived with thoughts of aircraft safety, which was the object of his daily work. It was simply that the idea of reducing an undamaged aircraft to a pile of scrap metal, or something close to it, was near-impossible for him to grasp. In Patroni's eyes, an aircraft—any aircraft—represented devotion, skill, engineering know-how, hours of labor, and sometimes love. Almost anything was better than its deliberate destruction. *Almost anything.*

Patroni intended to save the airplane if he could.

Behind him, the fuselage door opened, and slammed sed.

A young mechanic, small and spare, came forward to the ht deck, shedding snow. Joe Patroni had already slipped his parka and was strapping himself into the left seat.

"What's your name, son?"

"Rolling, sir."

Patroni chuckled. "That's what we're trying to get this air-ine doin'. Maybe you're an omen."

As the mechanic removed his own parka and slid into the ht seat, Patroni looked through the window behind his left oulder. Outside, the boarding ramp was being trundled ar.

The interphone chimed, and Patroni answered. The fore-in, Ingram, was calling from below. "Ready to start when u are."

Joe Patroni glanced sideways. "All set, son?"

The mechanic nodded.

"Number three starter switch—ground start."

The mechanic snapped a switch; Patroni ordered on inter-one, "Pressurize the manifold!"

From a power cart below, air under pressure whined. The aintenance chief moved a start lever to "idle"; the young echanic, monitoring instruments, reported, "Light-up on mber three." The engine note became a steady roar.

In smooth succession, engines four, two, and one followed. On interphone, Ingram's voice was diminished by a back-ound of wind and jet whine. "Power cart's clear. So's every-ing else down here."

"Okay," Patroni shouted back. "Disconnect interphone, d get the hell clear yourself."

He told his cockpit companion, "Sit tight, son, and hang .." The maintenance chief shifted his cigar, which contrary regulations he had lighted a few minutes earlier, so that it is now jauntily in a corner of his mouth. Then, with chunky igers spread, he eased the four main throttles forward.

With power at midpoint, the clamor of all four engines ew.

Ahead of the aircraft, in the snow, they could see a ground ewman with raised, lighted signal wands. Patroni grinned. f we come out fast, I hope that guy's a good runner."

All brakes were off, flaps slightly down to engender lift.

The mechanic held the control yoke back. Patroni worked the rudder controls alternately, hoping by sideways strain to help the airplane forward.

Glancing left, he saw Mel Bakersfeld's car was still in position. From an earlier calculation, Joe Patroni knew there could be only minutes—perhaps less than a minute—left.

Now, power was past three quarters. From the high-pitched note of engines, he could tell it was more power than the Aéreo-Mexican captain had used during the earlier attempt to get free. Vibration told why. Normally, at this setting, the airplane would be unimpeded, bowling fast down a runway. Because it was not, it was shaking severely, with every portion of its upper area straining forward, resisting the anchoring effect of the wheels below. The airplane's inclination to stand on its nose was unmistakable. The mechanic glanced uneasily sideways.

Patroni saw the glance and grunted. "She'd better come out now, or she's a dead duck."

But the aircraft was not moving. Obstinate, as it had for hours, and through two earlier attempts, it was remaining stuck.

In the hope of rocking the wheels free, Patroni slackened engine power, then increased it.

Still the aircraft failed to move.

Joe Patroni's cigar, moist from previous chewing, had gone out. Disgustedly, he flung it down and reached for another. His breast pocket was empty; the cigar had been his last.

He swore, and returned his right hand to the throttles. Moving them still farther forward, he snarled, "Come out! Come out, you son of a bitch!"

"Mr. Patroni!" the mechanic warned. "She won't take much more."

Abruptly, the overhead radio speakers came alive. The tower chief's voice. "Joe Patroni, aboard Aéreo-Mexican. This is ground control. We have a message from Mr. Bakersfeld: 'There is no more time. Stop all engines.' Repeat—stop all engines."

Glancing out, Patroni saw the plows and graders were already moving. They wouldn't close in, he knew, until the aircraft engines were stopped. But he remembered Mel's warning: *When the tower tells us we're out of time, there'll be no argument.*

He thought: *Who's arguing?*

The radio again, urgently: "Joe Patroni, do you read? Acknowledge."

"Mr. Patroni!" the mechanic shouted. "Do you hear? We have to shut down!"

Patroni shouted back, "Can't hear a damn thing, son. Guess there's too much noise."

As any seasoned maintenance man knew, you always had minute more than the panic-prone sales types in the front office said you had.

In the worst way, though, he needed a cigar. Suddenly Joe Patroni remembered—hours ago, Mel Bakersfeld bet him a box of cigars he couldn't get this airplane free tonight.

He called across the cockpit, "I gotta stake in this, too. Let's go for broke." In a single, swift motion he shoved the throttles forward to their limit.

The din and vibration had seemed great before; now they were overwhelming. The airplane shuddered as if it might fall apart. Joe Patroni kicked the rudder pedals hard again.

Around the cockpit, engine warning lights flashed on. Afterward, the mechanic described the effect as "like a pinball machine at Vegas."

Now, alarm in his voice, he called, "Exhaust gas temperature seven hundred."

The radio speakers were still emitting orders, including something about Patroni getting clear himself. He supposed he would have to. His hand tensed to close the throttles.

Suddenly the airplane shifted forward. At first, it moved slowly. Then, with startling speed, they were hurtling toward the taxiway. The mechanic shouted a warning. As Patroni watched back all four throttles, he commanded, "Flaps up!" Glancing below and ahead, both men had an impression of blurred figures running.

Fifty feet from the taxiway, they were still moving fast. Unless turned promptly, the airplane would cross the hard surface and roll into piled snow on the other side. As he felt the tires reach pavement, Patroni applied left brakes hard and slammed open the two starboard throttles. Brakes and engines responded, and the aircraft swung sharply left, in a ninety-degree arc. Halfway around, he slid back the two throttles and applied all brakes together. The Aéreo-Mexican 707 rolled forward briefly, then slowed and halted.

Joe Patroni grinned. They had stopped with the aircraft

parked neatly, in the center of the taxiway paralleling runway three zero.

The runway, two hundred feet away, was no longer blocked.

In Mel Bakersfeld's car, on the runway, Tanya cried, "He's done it! He's done it!"

Beside her, Mel was already radioing the Snow Desk, ordering plows and graders to get clear.

Seconds earlier, Mel had been calling angrily to the tower demanding for the third time that Joe Patroni stop engines immediately. Mel had been assured the messages were relayed, but Patroni ignored them. The heat of Mel's anger remained; even now, he could cause Joe Patroni serious trouble for the latter's failure to obey, or even acknowledge, an airport management order in a matter of urgency and safety. But Mel knew he wouldn't. Patroni had gotten away with it and no one with sense quarreled with that kind of success. Also, Mel knew, after tonight there would be one more item to add to the Patroni legend.

The plows and graders were already moving.

Mel switched his radio back to tower frequency. "Mel Bakersfeld to ground control. Obstructing aircraft has been moved from runway three zero. Vehicles following. I am inspecting for debris."

Mel shone a spotlight from his car over the runway surface. Tanya and the reporter, Tomlinson, peered with him. Sometimes incidents like tonight's resulted in work crews leaving tools or debris—a hazard to aircraft taking off or landing. The light showed nothing beyond an irregular surface of snow.

The last of the snowplows was turning off at the near intersection. Mel accelerated and followed. All three in the car were emotionally drained from tensions of the past minutes, but aware that a greater cause for tension was to come.

As they swung left, behind the plows, Mel reported, "Runway three zero clear and open."

Trans America Flight Two, *The Golden Argosy*, was ten miles out, in cloud, at fifteen hundred feet.

Anson Harris, after another brief respite, had resumed flying.

The Lincoln International approach controller—with a voice vaguely familiar to Vernon Demerest, though he hadn't stopped to think about it—had guided them thus far on a series of courses, with gentle turns as they descended.

They had been, both pilots realized, skillfully positioned so that a final commitment toward either of the two possible runways could be made without major maneuvering. But the commitment would have to be made at any moment.

Tension of the pilots grew as that moment approached.

A few minutes earlier, Second Officer Cy Jordan had returned to the flight deck, on Demerest's orders, to prepare an estimate of gross landing weight, allowing for the fuel they had used, and that remaining. Now, having done everything else necessary at his flight engineer's position, Jordan had gone back to his emergency landing station in the forward passenger compartment.

Anson Harris, aided by Demerest, had already gone through emergency trim procedures in preparation for landing with their jammed stabilizer.

As they finished, Dr. Compagno appeared briefly behind them. "I thought you'd like to know—your stewardess, Miss Meighen, is holding her own. If we can get her to a hospital soon, I'm fairly sure she'll come through."

Demerest, finding it hard to conceal his sudden emotion, had resorted to not speaking. It was Anson Harris who half-turned and acknowledged, "Thank you, Doctor. We've only a few minutes to go."

In both passenger cabins, all precautions which could be taken were complete. The injured, with the exception of Gwen Meighen, had been strapped in seats. Two of the doctors had stationed themselves on either side of Gwen, ready to support her as they landed. Other passengers had been

shown how to brace themselves for what might prove an exceptionally heavy landing, with unknown consequences.

The old lady stowaway, Mrs. Quonsett, a little frightened at last, was tightly clutching the hand of her oboe player friend. Weariness, too, was creeping over her from the exertions of an exceedingly full day.

A short time earlier her spirits had been buoyed by a brief message from Captain Demerest, relayed through a steward.

The captain thanked her, the stewardess said, for what had done to help; since Mrs. Quonsett had kept her part their bargain, after they landed Captain Demerest would pay his by arranging passage for her to New York. How wonderful of that dear man, Ada Quonsett thought, to remember that when he had so much else to think of! . . . But why she wondered: would she be around to make the trip all?

Ada, the niece of Customs Inspector Standish, had once before been holding the baby whose parents were in the seats beside her. Now she passed the child back to its mother. The baby—least concerned of anyone aboard the airplane—was asleep.

On the flight deck, in the right-hand seat, Vernon Demerest checked the weight information the second officer had given him against a weight-airspeed plaque on the pilots' instrument panel. He announced tersely, "Bug speed 150 knots."

It was the speed at which they must pass over the airfield boundary, allowing both for weight and the jammed stabilizer. Harris nodded. Looking glum, he reached out to set a warning pointer on his airspeed indicator. Demerest did the same.

Even on the longest runway their landing would be risky. The speed—more than 170 miles per hour—was diabolically fast for landing. Both pilots knew that it would mean an exceptionally long run after touchdown, with slow deceleration because of their heavy weight. Thus their weight came a dual liability. Yet to approach at anything less than the speed which Demerest had just computed would be suicidal; the aircraft would stall, and plummet earthward out of control.

Demerest reached for his radio mike.

Before he could transmit, the voice of Keith Bakersfeld

announced, "Trans America Two, turn right on heading to eight five. Runway three zero is open."

"Jesus Christ!" Demerest said. "And about time!"

He keyed his mike and acknowledged.

Together, both pilots ran through a pre-landing check list.

There was a "thud" through the airplane as their landing gear went down.

"I'm going in low," Harris said, "and we'll touch down early. We're still going to need every bit of real estate that we have down there."

Demerest grunted agreement. He was peering ahead, straining to penetrate cloud and darkness, to catch a glimpse of the airport lights which must be visible soon. His thoughts, despite his own outward calm, were on the damage to the plane. They still didn't know exactly how bad it was, or how it might have worsened during the rough flight in. There was that damned great hole; then there would be the heavy, final landing . . . God!—*the whole tail assembly might come off* . . . If it does, Demerest thought, at a hundred and fifty knots we've had it . . . *That son-of-a-bitch who had set off the bomb!* A pity he had died! Demerest would like to have his hands on him now, to personally rip out his stinking life . . .

Beside him, Anson Harris, making an Instrument Landing System approach, increased the rate of descent from seven hundred to eight hundred feet per minute.

Demerest wished desperately he were flying himself. With anyone else but Harris—with a younger or less senior captain—Demerest would have taken full command. As it was, he couldn't fault Harris for a thing . . . He hoped the landing would be the same way . . . His thoughts went back to the passenger cabin. *Gwen, we're almost in! Keep on living!* His conviction about their child, that he and Gwen and Sam would work out something, was as strong as ever.

On radio, Keith Bakersfeld's voice reported, "Trans America Two, your course and descent look fine. There is medium to light snow on runway. Wind northwest, thirty knots. You are number one to land."

Seconds later they emerged from cloud to see runway lights dead ahead.

"Lincoln approach control," Demerest radioed, "we have the runway in sight."

"Roger, Flight Two." Relief in the controller's voice was unmistakable. "The tower clears you to land; monitor their frequency when ready. Good luck, and out."

Vernon Demerest clicked his mike button twice—an airman's shorthand "thank you."

Anson Harris ordered crisply, "Landing lights on. Fifty degrees flap."

Demerest complied.

They were coming down fast.

Harris warned, "I may need help with rudder."

"Right." Demerest set his feet on the rudder pedals. When speed came off, the rudder—because of the destroyed boost mechanism—would be stiff, like a car's power steering which had failed, only more so. After landing, both pilots might need to exert force, together, to maintain directional control.

They zoomed over the airfield edge, runway lights strung ahead like strands of converging pearls. On either side were piled banks of snow; beyond them, darkness. Harris had made his approach as low as he dared; the nearness to the ground revealed their exceptional speed. To both pilots, the mile and three quarters of runway in front had never looked shorter.

Harris flared out, leveling the aircraft, and closed all four throttles. The jet thrum lessened; an urgent, shrieking wind replaced it. As they crossed the runway's edge, Vernon Demerest had a blurred impression of clustered emergency vehicles which would, he knew, follow them down the runway. He thought: *We damned well might need them! Hang on, Gwen!*

They were still floating, their speed scarcely diminished.

Then the aircraft was down. Heavily. Still traveling fast.

Swiftly, Harris raised wing spoilers and slammed thrust reverse levers upward. With a roar, the jet engines reversed themselves, their force—acting as a brake—now exerted in an opposite direction to the airplane's travel.

They had used three quarters of the runway and were slowing, but not enough.

Harris called, "Right rudder!" The aircraft was veering to the left. With Demerest and Harris shoving together, they maintained direction. But the runway's forward limit—with piled snow and a cavern of darkness beyond—was coming up fast.

Anson Harris was applying toe brakes hard. Metal was straining, rubber screaming. Still the darkness neared. Then they were slowing . . . gradually . . . slowing more . . .

Flight Two came to rest three feet from the runway's end.

17

By the radar room clock, Keith Bakersfeld could see that another half hour of his shift remained. He didn't care.

He pushed back his chair from the radar console, unplugged his headset, and stood up. He looked around him, knowing it was for the last time.

"Hey!" Wayne Tevis said. "What gives?"

"Here," Keith told him. "Take this. Somebody else may need it." He thrust the headset at Tevis, and went out.

Keith knew he should have done it years ago.

He felt a strange lightheadedness, almost a sense of relief. In the corridor outside he wondered why.

It was not because he had guided in Flight Two; he had no illusions about that. Keith had performed competently, but anyone else on duty could have done as well, or better. Nor—as he had known in advance—did anything done tonight wipe out, or counterbalance, what had gone before.

It didn't matter, either, that he had overcome his mental block of ten minutes ago. Keith hadn't cared at the time; he simply wanted out. Nothing that had happened since had changed his mind.

Perhaps, he thought, there had been a purging in his own sudden anger of a few minutes ago, in the admission, never faced before even in private thoughts, of how much he hated aviation, and always had. Now, fifteen years late, he wished he had faced the fact long ago.

He entered the controllers' locker room, with its wooden benches and cluttered notice board. Keith opened his locker and put on his outdoor clothes. There were a few personal things on the locker shelves; he ignored them. All he wanted was the color snapshot of Natalie; he peeled it carefully from the inside surface of the metal door . . . Natalie in a bikini; laughing; her impudent pixyish face, and freckles; her hair

streaming . . . When he looked at it, he wanted to cry. Behind the photograph was her note he had treasured:

*I'm glad we had our ration
With love and passion.*

Keith pocketed both. Someone else could clear the other things out. There was nothing he wanted to remind him of this place—ever.

He stopped.

He stood there, realizing that without intending to, he had come to a new decision. He wasn't sure of everything the decision involved, or how it might seem tomorrow, or even if he could live with it beyond then. If he couldn't live with it, there was still an escape clause; a way out—the drugstore pillbox in his pocket.

For tonight, the main thing was: he was not going to the O'Hagan Inn. He was going home.

But there was one thing he knew: If there was to be a future, it must be removed from aviation. As others who had quit air traffic control before him had discovered, that could prove the hardest thing of all.

And even if that much could be overcome—*face it now*, Keith told himself—there would be times when he would be reminded of the past. Reminded of Lincoln International; of Leesburg; of what had happened at both places. Whatever you escaped, if you had a whole mind, there was no escaping memory. The memory of the Redfern family who had died . . . of little Valerie Redfern . . . would never leave him.

Yet memory could adapt—couldn't it?—to time, to circumstance, to the reality of living here and now. The Redferns were dead. The Bible said: *Let the dead bury their dead*. What had happened, was done.

Keith wondered if . . . from now on . . . he could remember the Redferns with sadness, but do his best to make the living—Natalie, his own children—his first concern.

He wasn't sure that it would work. He wasn't sure that he had the moral or the physical strength. It had been a long time since he was sure of anything. But he could try.

He took the tower elevator down.

Outside, on his way to the FAA parking lot, Keith stopped.

On sudden impulse, knowing he might regret it later, he took the pillbox from his pocket and emptied its contents into the snow.

18

From his car, which he had parked on the nearby taxiway after quitting runway three zero, Mel Bakersfeld could see that the pilots of Trans America Flight Two were wasting no time in taxiing to the terminal. The aircraft's lights, now half-way across the airfield, were still visible, moving fast. On his radio, switched to ground control, Mel could hear other flights being halted at taxiway and runway intersections to let the damaged airliner pass. The injured were still aboard. Flight Two had been instructed to head directly for gate forty-seven where medical help, ambulances, and company staff were waiting.

Mel watched the aircraft's lights diminish, and merge with the galaxy of terminal lights beyond.

Airport emergency vehicles, which had not after all been required, were dispersing from the runway area.

Tanya and the *Tribune* reporter, Tomlinson, were both on their way back to the terminal. They were driving with Joe Patroni, who had handed over the Aéreo-Mexican 707 for someone else to taxi to the hangars.

Tanya wanted to be at gate forty-seven for the disembarking of passengers from Flight Two. It was likely she would be needed.

Before leaving, she had asked Mel quietly, "Are you still coming home?"

"If it isn't too late," he said, "I'd like to."

He watched while Tanya pushed a strand of red hair back from her face. She had looked at him with her direct, clear eyes and smiled. "It's not too late."

They agreed to meet at the main terminal entrance in three quarters of an hour.

Tomlinson's purpose was to interview Joe Patroni, and after that the crew of Trans America Flight Two. The crew—and Patroni, no doubt—would be heroes within a few hours. The dramatic story of the flight's peril and survival, Mel

suspected, would eclipse his own pronouncements on the more mundane subject of the airport's problems and deficiencies.

Though not entirely, perhaps. Tomlinson, to whom Mel had entrusted his opinions, was a thoughtful, intelligent reporter who might decide to link present dramatics with the equally serious long-term view.

The Aéreo-Mexican 707, Mel saw, was now being moved away. The airplane appeared undamaged, but would undoubtedly be washed down and inspected thoroughly before resuming its interrupted flight to Acapulco.

The assortment of service vehicles which had stayed with the aircraft during its ordeal by mud were following.

There was no reason for Mel not to go himself. He would—in a moment or two; but for the second time tonight he found the airfield's loneliness, its closeness to the elemental part of aviation, a stimulus to thought.

It was here, a few hours ago, Mel remembered, that he had had an instinct, a premonition, of events moving toward some disastrous end. Well, in a way they had. The disaster had happened, though through good fortune it had been neither complete, nor had the airport's facilities—or lack of them—been directly responsible.

But the disaster *could* have involved the airport; and the airport in turn might have caused complete catastrophe—through inadequacies which Mel had foreseen and had argued, vainly, to correct.

For Lincoln International was obsolescent.

Obsolescent, Mel knew, despite its good management, and gleaming glass and chrome; despite its air traffic density, its record-breaking passenger volume, its Niagara of air freight, its expectations of even more of everything, and its boastful title, "Aviation Crossroads of the World."

The airport was obsolescent because—as had happened so often in the short six decades of modern aviation history—air progress had eclipsed prediction. Once more, expert prognosticators had been wrong, the visionary dreamers right.

And what was true here was true elsewhere.

Nationwide, worldwide, the story was the same. Much was talked about aviation's growth, its needs, coming developments in the air which would provide the lowest cost transportation of people and goods in human history, the chance these gave the nations of the world to know each other

better, in peace, and to trade more freely. Yet little on the ground—in relation to the problem's size—had been done.

Well, one voice alone would not change everything, but each voice which spoke with knowledge and conviction was a help. It had come to Mel within the past few hours—he was not sure why or how—that he intended to continue speaking out the way he had tonight, the way he hadn't for so long.

Tomorrow—or rather, later today—he would begin by summoning, for Monday morning, an emergency special meeting of the Board of Airport Commissioners. When the Board met, he would urge an immediate commitment to build a new runway paralleling three zero.

The experience of tonight had strengthened, as nothing else could, the arguments for increasing runway capacity which Mel had presented long ago. But this time, he determined, he would make a fight of it—with plain, blunt words, warning of catastrophe if public safety were given lip service only, while vital operational needs were ignored or shelved. He would see to it that press and public opinion were marshaled on his side—the kind of pressure which downtown politicians understood.

After new runways, other projects, so far only talked about or hoped for, must be pressed on; among them—an entirely new terminal and runway complex; more imaginative ground flow of people and freight; smaller, satellite fields for the vertical and short takeoff aircraft which were coming soon.

Either Lincoln International was in the jet age, or it wasn't: if it was, it must keep pace far better than it had.

It was not, Mel thought, as if airports were an indulgence or some civic luxury. Almost all were self-sustaining, generating wealth and high employment.

Not all the battles for ground-air progress would be won; they never were. But some of them could be, and some of what was said and done here—because of Mel's name in airport management—could spill over into national and international arenas.

If it did, so much the better! The English poet John Donne Mel remembered, had once written: *No man is an island entire of itself; every man is a piece of the continent, a part of the main.* No airport was an island either, and those who called themselves International should ~~know~~ *know* the truth of

thinking to justify their name. Perhaps, working with others, Mel could help to show them how.

People who hadn't heard from Mel Bakersfeld for a while might quickly learn that he was still around.

And intensive work, a resumption of more of his old industry-wide interests, might help with personal problems by keeping his mind occupied. Mel hoped so, anyway. The thought was an abrupt reminder that sometime soon—perhaps tomorrow—he would have to call Cindy and arrange to move out his clothes and personal belongings. It would be an unhappy process which he hoped the girls, Roberta and Libby, would not be around to see. To begin with, Mel supposed, he would move into a hotel until he had time to arrange an apartment of his own.

But more than ever he knew that Cindy's and his own decision for divorce had been inevitable. Both of them had known it; tonight they merely resolved to remove a façade behind which nothing existed any more. Neither for themselves nor for the children could anything have been gained by more delay.

It would still take time, though, to adjust.

And Tanya? Mel was not sure what, if anything, was ahead for them together. He thought there might be a good deal, but the time for a commitment—if there was to be one—was not yet. He only knew that tonight, before this long and complex workday ended, he craved companionship, warmth, and tenderness; and, of all the friends he possessed, Tanya had those qualities in greatest measure.

What else, between himself and Tanya, these might lead to would be known in time.

Mel put his car in gear and swung it toward the perimeter road which would take him to the terminal. Runway three zero was on his right as he drove.

Now that the runway was open, he saw, other aircraft were beginning to use it, arriving in a steady stream despite the lateness. A Convair 880 of TWA swept by and landed. Behind it, half a mile out, were the landing lights of another flight approaching. Behind the second, a third was turning in.

The fact that Mel could see the third set of lights made him aware that the cloud base had lifted. He noticed suddenly that the snowfall had stopped; in a few places to the south, patches of sky were clearing. With relief, he realized the storm was moving on.

ABOUT THE AUTHOR

ARTHUR HAILEY was born in Luton, England, in 1920. He is a flight lieutenant in World War II and served in the Royal Air Force in the Middle and Far East.

His two most recent books, *Airport* and *Hotel*, have been sensational bestsellers. His novels are published in many major languages. His plays have been performed throughout the world on television, and many of his stories have been made into successful motion pictures. Mr. Hailey lives in California with his wife and three children.

(Continued from inside front cover)

And now here is AIRPORT, Arthur Hailey's non-stop bestseller (12 months on the bestseller lists!) that takes you on an insider's tour into the lives of the people involved in the high pressure world of a great international airport. AIRPORT was researched, planned and written over a period of three years. Hailey says, "For over a year I haunted the airports of North America and Europe.... The result was a wealth of stories, characters, inside information, incidents, excitement — far more than I could ever hope to use. What I did use, during the long, later toil of planning and writing, the reader will find in the pages of AIRPORT — fiction, naturally... though seldom more than a ticket width from fact."

Viewed through the eyes of the master storyteller, this is an action-filled story of people who daily hold thousands of lives in their hands. And, it is a breath-catching story you will not soon forget.
